46492. How was that expended? It was expended to provide the Island of Cape Clear with a harbour of refuge. I am glad to say that the works are now completed, and that the poor people who have invested their whole savings in that island, can now rest in peace in their beds when the storm comes on, knowing that their vessels and property are safe. I would be very glad that some such contribution would come

along here, because along our seaboard here there is a lot of money required to be laid out. The first money we got was what you stated. We got the assent of the Government and the Congested Districts Board for a grant of £220 for Crow Head the other day, and £25 for a road; but that is only one of the many places along the seaboard in the County Cork, which is so largely connected with the fishermen. Down at Tralisbeen where there is a race of these hardy fishermen, there is no landing-stage. They have to wade into the water to bring in their boats. Now, on the western end of Sherkin Island, where they are curing mackerel under the greatest difficulties, they require a slip or landing-stage. My colleague, Mr. Hurley, on the Cork County Council, will give you evidence of the wants of another district that is long neglected.

46493. Mr. SUTHERLAND.—Of course you are aware generally of the restrictions that would be imposed upon the curers in their operations by adopting a brand; are they willing to undertake these restrictions?—I believe that they generally are, but I consider that in the interests of the poor fishermen and the boat-owners, who have borrowed money from the Congested Districts Board, that it is their duty to come to their assistance.

46494. I am asking you with regard to the interests of the fish curers who cure the mackerel themselves. You are aware that the brand is only given with regard to the herrings after strict inspection and strict regulations in curing. My question to you is would the Irish mackerel curers undertake the same sort of supervision and the same sort of restrictions as they do in Scotland with regard to the herrings?—They would undoubtedly co-operate with any movement for the purpose of curing the fish properly.

46495. But the fish must be landed within a certain time, and must not lie over-night, and must be dealt with immediately without stopping, and the man who ultimately brands them has to superintend each operation. Every fish has to be measured, they have to be carefully selected in sizes, they have to be salted, and lie for a certain length of time; then they are finally inspected. Would the mackerel curers in Ireland undertake the same sort of thing provided it was to get a brand?—I cannot speak for the entire, but I certainly say that the small curers would, and they are the back-bone of the industry, because the large curer is a curer in Manchester or some other large centre, and can go any place he wishes, and then what would become of the boat owners or the fishermen; but I believe they would co-operate in every possible way to put the fish properly out of their hands, and they would find it would be to their advantage.

46496. You mention the fact that you were willing to leave the question of the brand voluntarily to the men?—Yes; first as an experiment, as so much depends on opinion, I would not press in that direction any number of buyers; but I would first test it, and the volume of opinion in the country is that we should have a brand, and restore to the Irish fish their character in America. If we are to continue losing ground in that market we have no other market. Your herrings in Scotland can be sold in Russia and Germany and several foreign markets, but the Irish-cured mackerel has no other market in the world except America, and if that is closed against us our interest is annihilated.

46497. I agree perfectly with you as regards that; I am only anxious to know what was the motive that led Mr. Green and his colleague rather to discourage that at this stage; there is the question of expense; you found very largely on this analogy of the herring brand in Scotland; of course, you are aware that the herring brand in Scotland is purely voluntary?—I know that perfectly well, that in the year 1898 1,260,000 barrels in Scotland were not branded, but they branded half a million.

46498. Then there is the question of payment; you also know it pays itself in Scotland, with a surplus every year; half the fishing piers in Scotland have been built out of the surplus of the branding, after it paid all its own expenses, with 4*d.* a barrel?—I believe that thoroughly, but we say this—I have been reading up the history of the fisheries in both countries—without the slightest disparagement, Scotland has become Scotland because it has got funds and been so favoured in matters relating to fishing.

46499. This is purely voluntary, and the money we got for fishing harbours in Scotland was earned by the boats themselves and paid by the fish-curers?—Yes, but they are many years doing that, and it is only now that we are putting our house in order. As far as Ireland is concerned we had no technically trained inspector. You cannot turn me to take charge of an hospital: I am not a doctor.

46500. I daresay the reason was there was no settled policy with regard to fishing in Ireland consistently carried out; there was a sporadic effort here and there?—Yes, exactly; it was without a head. My idea is it should be put into shape; this is one of the means by which it can be put into shape, and nobody can say that the Government or the Congested Districts Board is taking an arbitrary course when it is left voluntary. My idea is if you apply the test you will find that it is so; that it is wrong to say that it should be shelved by an official against the great volume of opinion of the country.

46501. Reading up the evidence given before these Inquiries I find some misrepresentations as regards Scotland—for instance, that the brand was not popular. The Scotch people are a hard-headed people; they are not going to pay 4*d.* on every barrel that is presented, and continue to do it for 100 years unless it pays them—when you pay 4*d.* more for a barrel of herrings and get two shillings more in the market for it on that account, clearly you can see the advantage of that?—Yes.

46502. Do you think that the curing of mackerel in Ireland has been deteriorating—that the curing is not as good as it used to be?—There was a bad example shown here some time ago: Penzance boats came up to our shores and caught mackerel with a mesh 2½ inches wide. That class of mackerel has a very bad effect. Our fishermen before they came used 3-inch meshes, but in consequence of that mesh and the demand and all that the poor people had to follow, and there is no doubt whatever about the result that it has had a very bad effect.

46503. That would affect the size of the mackerel, but in curing do they put them in sizes?—No, but the grading would have to come with the inspection. When I was in the trade sending away fish to England, if we had ten small mackerel in half a box the whole box was destroyed, and its name was ruined.

46504. That is one of the points—selecting the sizes?—Yes. Another point with reference to the mackerel trade is our spring mackerel season is definitely a thing of the past. With the enormous quantity of trawled fish dumped into England by steam trawlers—ten or eleven million tons—the big prices realised formerly by spring mackerel in England are a thing of the past. Our spring fishing is growing lighter year after year. It happens often that after a week or a fortnight prices drop, and unless they turn and cure for America the boats have to remain idle.

46505. I think it is a very fortunate opening for you—the trade with America?—Yes, if we had not that it would stop mackerel fishing. As a matter of fact, French boats come over here and fish outside the three mile limit, but it is impossible to send fresh or cured mackerel into France as the duty there is sixteen shillings per barrel; we have only the one market, and that is America.

46506. Mr. KAVANAGH.—You would only suggest that the brand should be voluntary?—At present. I think on the volume of evidence that was given by the curers and fishermen and those interested in this part of the country, that it should not be shelved altogether, as Mr. Green has done in his report, but that we should have it established there and give them an opportunity, and lead on those who would not adopt inspection and branding to find that the fish would not realise the same prices as the others, and they would be very glad to fall in with the new system; and it is unfair to Ireland to say that an industry should not be safeguarded. We have a trade mark now to safeguard other branches of industry, and we know that the fishing should be protected in the same respect. There is one other important matter to which I would wish to draw attention; it is this:—some years ago the Government gave a free grant to extend the railway from Skibbereen to Baltimore. That was for the purpose of developing the fisheries down at that important fishing station. £60,000 were available, but unfortunately the line was not completed; it was taken to within three or four hundred yards of deep water, and the effect that was intended could not be carried out. The fish have to be jolted and carted out,

July 16, 1907.

Mr. Timothy Sheehy.

whereas if they had the railway down to the deep water and a pier, they could have the fish boxed and brought into Skibbereen and the other towns and villages along the coast; in fact it would be the greatest advantage if it can be done. It is a project I believe that would benefit the fisheries in a great degree. I hope this Commission will use its influence to have the Government give the balance. At that time we had no chance of linking up the lines in the South of Ireland, but thanks to his lordship, Dr. Kelly, who raised a great agitation to link up the lines in the South of Ireland, we had a Bill carried through Parliament. That Bill justifies the hope that we had here in the South of Ireland that we would have communication with Dublin and the great markets at the other side. It is understood that this communication will be carried out immediately; if so the missing link of the line from Cork to Baltimore is the three or four hundred yards that are wanting down at Baltimore.

46507. You say the Government promised a certain sum for this work?—At the time the line was completed; it was a great pity that after the Government had spent £60,000 on the project they did not complete it. Mr. Balfour gave £60,000 as a free grant to make this railway, nine miles from Skibbereen.

46508. What is the estimated expenditure?—£10,500—there would have to be a pier in connection with it.

46509. Most Rev. Dr. O'Donnell.—That would bring your railway system down to the deep water pier?—Yes; you could get in at the North Wall, in Dublin, and come down and view the beauties of Carbry's Hundred Isles. The Congested Districts Board agreed to give £3,500.

46510. That is one substantial indication that in their opinion the work would be a valuable one?—They recognised the fact. On October the 19th, 1904, they wrote acknowledging receipt of my letter of the 18th inst., and informed me that the pier at Baltimore in connection with the railway would cost £10,500, and they would give a contribution of one-third provided the remaining two-thirds are contributed by the Board of Works and the railway company.

46511. Is it a fact that about that time the absence of through communication at Cork was the great obstacle to the continuation of this work?—Yes, that was the fatal objection.

46512. You have stated now owing to the action of the Bishop of Ross that that obstacle will be removed?—Yes.

46513. And that there is a prospect that the through communication will be a reality soon?—Certainly, it is on the Statute Book. The Government are giving a substantial contribution, and the Cork and Bandon Railway are giving £15,000, and the Cork Harbour Board £10,000. This shows the reality about it when the local companies are investing their moneys in it.

46514. Is not there some great English company concerned in it?—The Great Western.

46515. Don't you think now the time has arrived for making the project of the deep water pier at Baltimore a very live one?—Yes. I have no doubt about it we would have some of the American liners call and the mails dropped at Baltimore. There are portions of the coast line from here to Courtmacsherry that require attention, and there is no possibility of getting grants for piers and slips or improving the condition of the people in any way unless it is scheduled as congested.

46516. Are there any farms that would be available for the enlargement of holdings in this district?—In the constituency I represent I regret to say that we have no untenanted lands in the hands of the landlord. There is a tenant farmer in Castlehaven who is in possession of 500 acres of land, and I believe if he got a satisfactory price he would let us have the land.

46517. Mr. O'Kelly.—Is it residential?—It is; he has two or three dairy farms, and is residing on one portion of it himself, but he is working the entire of it under the dairy system. As to the history of it—fifty years ago there was a terrible rooting out of the people here, entire townlands were rooted out, and the land was handed over to one single person. Round Skibbereen here suffered to a great extent in that respect. Now it would be a great advantage and satisfaction to have the descendants of some of those people whose houses were actually burned over them restored back to the land.

46518. Do you think that these 500 acres could be acquired?—Yes, he informed me that if he got a reasonable and fair price he would be prepared to negotiate with the Congested Districts Board.

46519. Is the farm situated within a scheduled area?—It is exactly in the centre of the congested area.

46520. On the borders of the farm, I take it, there are many small occupiers on holdings that need enlargement?—There is no doubt; furthermore, there is great emigration from that. The young men from that parish, farmers' sons and labourers, have to go. If these men, who are thoroughly able to till the soil and work it, got a chance of being still at home, they would give up going to America.

46521. Are there any farms on the rest of the seaboard of Cork eastward towards Courtmacsherry?—Mr. Hurley will give evidence on that point. There is one other important question I wish to draw attention to. We have in the vicinity of Carberry a most important industry—the Benduff Slate Quarries. It is in existence, and has been worked for the last fifty years. The slate is of splendid quality. At the present time, as you are aware, 4½ millions of money have been passed for the erection of labourers' cottages in Ireland—25,000 of them are to be built; and it would be a great advantage to have such a quarry that is capable of further development and a large output; if it got assistance so as to provide machinery up to date to develop it a little more it would be the means of keeping many at home here in Ireland. There was over £30,000 worth of slate came into the South of Ireland. I had a conversation with the managing director of the quarry, and he states he would be prepared to take £500 for new machinery, and £500 for development, and that he would give reasonable interest for the money; that at the present moment there are only £2,000 due on the quarry, though the royalties and fee-simple cost £10,000 and its development cost £17,000 more, that is £27,000. He said at the present moment, with the old machinery available, he could only employ 15 or 16 men; he is not at all able to fulfil the orders that are pouring in; and he is confident that with improved machinery he would be able to give employment to 50 or 60 men.

46522. Is this a private company?—It is a family company, James Swanton, Limited. If you see your way to communicate with him, you will get all the information possible.

46523. Mr. Kavanagh.—Is it paying at present?—It is paying as a matter of course, but the condition is this: unfortunately in Ireland for industrial purposes it is very hard to get advances in the banks. They would rather send over to London and have it invested over there at 3 per cent., whereas a good solid industry in Ireland cannot get financial support. They are rather afraid of the venture. I rather think Irish money should get a chance of being invested at home.

46524. If it was a good paying concern would there be any difficulty in getting money advanced?—These banks have this way of seeing things.

46525. I don't mean banks?—This is a private company. I have no interest whatever in connection with the matter; we are trying to start new industries under great difficulties; when we have an old established industry we should try the best we can to promote it.

46526. The only question is why should the Government be asked to do what private enterprise ought to do itself?—As far as an industry such as the Benduff Quarry is concerned, that would be a public benefit; it did give large employment in the past in that district; there were far more employed. An accident occurred there some eight or ten years ago, a great portion of it fell in; six or eight men were killed; and from that day it slackened a bit. I have no doubt whatever if the Congested Districts Commission would interest itself in the matter something might be done. I saw that they bought towns in the West of Ireland, and they buy estates by the score, and we would be thankful if something could be done for Cork.

46527. Mr. O'Kelly.—Considering the way in which England strangled Irish industries in the past do you think it unreasonable to ask restitution?—It is not; on the contrary, if we were getting three or four millions a year for the next fifty years we would not get back what they took from us.

46528. Most Rev. Dr. O'Donnell.—Is not it true that the slate quarry not only gives employment, but that the existence of these quarries has very much to do with the creditable character of the houses one sees from Skibbereen on towards Lough Ine?—Undoubtedly, if that quarry was not in existence and another up at Drimoleague, the poor people round here would not be able to have the fine houses that your lordship admired this morning. The Benduff slates are on all the houses, and were it not for that you would see in this district the old thatch still.

July 16, 1907.

Mr. Timothy Sheehy.

Mr. Jeremiah Hurley examined.

46529. Mr. Kavanagh.—You are a member of the Cork County Council, and are nominated by the Skibbereen Rural District Council to give evidence?—Yes. I wish first to refer to Glandore harbour. It is a beautiful sheet of water. At the Glandore side of it a pier was erected a considerable number of years ago. For trading purposes it is almost useless. In a southerly wind no vessel can lie with safety near it. It is used chiefly for curing mackerel. There is very little cargo discharged there. There is an occasional coal cargo. In order to bring the mackerel to the harbour the fish has to be all taken out of the fishing boat and brought into a small yawl and unloaded at the pier and again handled there. This handling the fishermen tell me—and I believe it to be the case—causes considerable deterioration in the quality of the fish, and makes the process of a perfect curing more difficult.

46530. Of course it is tedious too?—Yes. What the people out there want is the erection of a quay a little way from Glandore where the fishing vessels can come alongside at any state of the tide. This could be done cheaply. The ground there is suitable, and it would not cost a great deal, I think. The fishing boats could come alongside and land their catches and go off to sea at once.

46531. There is a pier at present?—There is a pier.

46532. You suggest it is in the wrong place?—For sheltering small boats and that kind of thing it is useful, but it is absolutely useless for trade. The mackerel are being cured on it, and that is practically the whole of its use at present.

46533. It could not be enlarged or lengthened?—The fishermen there say it would never be made to meet the requirements of the place. The proper course is to erect a pier a little distance away from that in a more sheltered place. That will also have the advantage of allowing the fishing fleet to come alongside at any stage of the tide and discharge their catches.

46534. What is the extent of the fishing in that harbour; are there many boats?—Thirty-five boats.

46535. All local boats?—No, about half that number I believe; about eighteen boats belong to two Manx companies. All the others are local boats. The Manx companies' boats are all manned by local fishermen. There are no strange fishermen there at all. They are all manned by local men.

46536. What made the herring fishing go down in this part of the world; it was a good trade at one time?—I have not sufficient experience to be able to give an opinion of any value on that.

46537. It seems to have disappeared altogether down here?—Herrings have been taken off Glandore, beautiful large herrings; I saw them sold out my way.

46538. You say mackerel is the great fishing here?—Yes. At the other side of Glandore harbour, the Unionhall side, there is a quay that was built twenty or twenty-five years ago. It is also used as a curing station, and for discharging cargo, and it is entirely inadequate for the requirements of the fish-curing alone. I was speaking this morning to two fish merchants from Unionhall, and they said that the pier could be very cheaply enlarged to give them more space for their operations, and they asked me to press on the Commission that some money be expended on the place to enlarge the quay. There is a piece of foreshore between the present quay and a jutting rock, which could be cheaply taken in, and would give plenty of space for curing operations. It is jutting out into the water near the channel. The channel is not deep. The channel also requires to be dredged so as to allow steamers of 300 tons burden to come up and discharge coal and other commodities. At present they have to wait for high water to come.

46539. Is this under the Congested Districts Board?—No. There is no portion of the coast scheduled as congested between Castlehaven harbour and Courtmacsherry, though in that district the general opinion prevails that it would have been scheduled were it not for the fact that there are one or two large farms in the district.

Mr. Jeremiah Hurley.

46540. Most Rev. Dr. O'Donnell.—They run up the valuation?—Quite so, and there are not many people living on those farms. Leap, at the head of Glandore harbour, is also a place where a little trading is being done. There is a great deal of sand discharged there. The sand is dredged in the harbour. The owners of two lighters that are being worked in the place tell me that they discharge from 100 to 150 lighters of sand there yearly, and if they had proper quay accommodation and a good harbour, they could discharge considerably more than that, and would have a market for it. The channel going up to Leap is closed in, and in order to have any vessels of any reasonable size, say nine or ten foot draught, they would require to be floated into it on top of a high spring tide; and any coaster drawing less than that is not of very much use. So we think that the channel up to Leap ought to be dredged, and a quay there which belongs, or did belong to the slate quarry company, ought to be improved and enlarged. Cargoes of coal and maize are discharged at Leap. Glandore and Unionhall are on each side of the harbour, a mile or two from the sea. Leap is further on up towards the head of the harbour. What they require at Unionhall is to have the pier enlarged. It has a narrow head jutting out into the channel, which channel wants deepening, and there is only room for one vessel to lie there. It cannot well discharge at the end of it because it is narrow. I am not quite sure of its width. It is not much wider than this courthouse. They have to come up with the tide to discharge. They want a T-piece put at the head of the pier to give greater space for discharging cargoes, and also to relieve the pressure that exists and to give space for the fish-curing.

46541. Is that district scheduled?—No.

46542. For the same reason, I suppose?—For the same reason.

46543. Mr. Kavanagh.—Do you think the fishing trade would increase if all these extra facilities were given?—I cannot say that it would increase the quantity of the fish, but I know that it would be prosecuted with greater industry, and I daresay when those facilities were used the catches of fish would be a great deal larger; and they could devote more time to fishing. Now they have to devote a lot of time to discharging the catch, and very often they are late in returning to the fishing grounds.

46544. Your next point, I think, is railways?—There is an agitation in Rosscarbery, Glandore, Leap, and Unionhall to connect Clonakilty with deep water in Glandore harbour. I attended a meeting held in Unionhall in support of that about a year ago, and the one opinion at that meeting, which was a very representative one—shopkeepers and others from Skibbereen and Unionhall and the district there, and a considerable number of country people and gentlemen interested in the development of the place—that a railway ought to be constructed from Clonakilty to the deep-water pier at Glandore harbour, and the quay which I suggested a while ago should be made can be utilised for this purpose, and the railway could be made to run this way and take in the catches of fish from the boats.

46545. How far is the proposed railway?—From Clonakilty, about fourteen miles.

46546. A light railway?—It should be the usual gauge; the Cork and Bandon gauge. Anything else would not be much good.

46547. Would you be prepared to give a baronial guarantee to that?—I think not.

46548. You think you have enough guarantees?—Yes. Portion of the district through which this line would run is already paying a guarantee for the extension of the Cork and Bandon line to Courtmacsherry. People almost into Ross are paying that and don't want a double loss for railways.

July 16, 1907.

Mr. Jeremiah Hurley.

46549. Do you mean from Skibbereen to Schull?—There is a small patch of country between Leap and a little beyond Rosscarbery that is not paying for either, but the charge for the Schull and Skibbereen line extends to Leap, and for the eastern side extends almost into Ross, though the intervening district, five or six miles across, is not paying for it.

46550. Have you any knowledge of the cost of the railway from Schull to Skibbereen?—Yes. I think the paid up capital is £57,000. That would be £4,000 a mile, practically.

46551. Mr. O'Kelly.—That was for absolute construction?—For construction and rolling stock.

46552. There was very little for the purchase of land?—No. There is a great deal of dissatisfaction expressed at the manner in which that line is constructed. The contractor got out of it very lightly. There was very inferior and unsuitable rolling stock put on it, which had to be changed by the guaranteeing area soon after the construction of the line. At one time the railway was actually idle for want of rolling stock.

46553. Under whose supervision was it constructed?—The grand jury and the county surveyor.

46554. Most Rev. Dr. O'Donnell.—You have no doubt that £4,000 a mile would be an extravagant sum for a line constructed along a highway?—I am not an expert, but I believe it is extravagant. The contractor boasted publicly afterwards that he made a good lot of money out of us here. If this connection that is suggested is made it will go through the district where those slate quarries are. Mr. Sheehy said some time ago he believed the Benduff quarries were worked for fifty years. I believe they were worked for considerably over a century. I myself saw as many as 200 men working in them. I know that the way in which the common labourers were paid was twelve shillings weekly, and the work was done by contract. So that they were drawing weekly wages, and any additional money due to them was paid up at the end of the month, which would very often amount to £2 a man.

46555. Mr. O'Kelly.—Over-time?—No. The rock was removed at so much a cubic yard. The ground cleared by these men was measured, and twelve shillings a week was given to maintain them. They were paid so much per yard, and any excess was paid at the end of the month. It often amounted to £2 at the end of the month. The same rule prevailed with regard to the skilled labourers who quarried the rock and split it up into slates. They were paid fifteen shillings a week. Their excess earnings over that at the end of the month often amounted to over £3 or £3 10*s.* a month for each man. They worked in gangs of a dozen men.

46556. Mr. Sheehy tells us that there are only sixteen men in that quarry now?—I think there would not be more than a score.

46557. Mr. Kavanagh.—How was that brought about?—That was brought about from the failure of Shaw, who was president of the Munster Bank when it got smashed. Shaw owned half of the quarry at the time and the Swanton family the other half.

46558. Most Rev. Dr. O'Donnell.—So that that catastrophe had serious results for the quarry?—Decidedly. At that time there was the most up-to-date machinery working in the place. There were two fine steam engines and another steam engine had been brought on the ground prepared to be erected. In consequence of that it was never erected and it was sold for scrap iron a short time ago. There were at that time twenty-two or twenty-three sawing tables for sawing up the blocks as they left the quarry before they came into the hands of the men who split them into slates.

46559. As a consequence, the bank's collapse resulted in the quarry never being worked by up-to-date machinery?—The up-to-date machinery was in progress at the time of the disaster. The failure of the bank shortened the capital of the quarry and the funds to pay the workers. Consequently the work began to dwindle. Finally the quarry was taken over altogether by the Munster Bank to recoup themselves for their loss. During the time it was being worked by the Munster Bank still greater loss occurred and a cliff fell down. It was stated at the time that a million tons of rock fell into it. There were eight men killed in it, the bodies of five of whom still remain buried there. I assisted myself in taking out the other three, and in taking out a man alive who was buried some hours in it. At that time the quarries were a good paying concern, and I saw drawing to the quay of Leap, distant about three and a half miles, fifteen horses every day of the year, for years and years, each horse drawing three tons of slate daily, and when there would be a rush perhaps fifteen horses more would have to be employed, and I have seen vessels waiitng there for their cargo, and thousands of tons of slate shipped off that way at a time. If this railway were made it will pass by the gate of that quarry and that quarry will be an excellent feeder for it. I know in the locality that if transit facilities were given plenty of private capital would flow into the place and work it, and, of course, perhaps a Government grant may help it, but I think capital would flow more freely into it were it not for the difficulties of marketing the slate. It is interesting to note what happened in reference to this. Clonakilty railway station is very difficult of access. To bring slates to that station it would be necessary to cart them up a very steep hill. The railway company gave the quarry company the privilege of loading their slates at a small siding, more easily approached, near the town. That siding is about eleven miles from the quarry. The company loaded their slates there, and they were taken up to Cork at so much a wagon. The railway company, in their desire to promote Irish industries, thought they were giving too great a privilege to the quarry company and refused to allow them to load their slates at this siding any longer, with the result that the company had to cart the slate to Skibbereen, a distance of eleven miles, and pay a railway rate of fifty-three miles from Skibbereen to Cork instead of thirty-two miles, from Clonakilty to Cork, and if slate is got from that quarry now, or the neighbouring quarries—for there is another quarry also at work there—any slates for Cork have to be brought in here to Skibbereen and railed from Skibbereen to Cork. Benduff quarry is within forty-two miles of Cork, and in order that the slate may be sent to Cork it has to go a journey of sixty-four miles.

Mr. Kavanagh.—Those facts should be brought before the Railway Commission.

46560. Most Rev. Dr. O'Donnell.—Have any steps been taken to give effect to what the Chairman has now suggested as to bringing the necessity for transit facilities before the Railway Commission?—No, I think not; not that I am aware of. Prison Cove is a little cove within the harbour at Glandore, near the harbour's mouth. There are some yawls there with which the men prosecute the line fishing. There is no landing stage or shelter and the place is very badly in need of some little shelter for the boats. They have to haul the boats by brute force up to the land when there is a storm, and it should be within the power of the Congested Districts Board or some similar body to give grants to help places such as Prison Cove.

46561. Mr. Kavanagh.—I am afraid that the powers of the Congested Districts Board would have to be extended considerably to meet all these requirements?—We think in that district that it is really monstrous that we are neglected so long. The same is to be said about Cow Cove, which is a wild place open to the sea, two or three miles from Glandore. What I say about Cow Cove would also apply to Blind Harbour. I was asked by the people of that place to try to get some body to build a landing stage to facilitate them in some way in carrying on their business. Both these places are just as nature left them. Not a stone has been moved to assist them to bring in catches of fish, sand, etc. They have to haul up their boats by main force from the storms. As it was no good approaching the Congested Districts Board I approached the Department of Agriculture. The Department at once promised to send down an inspector. This would be in the autumn of 1903. The inspector came down early in January, 1904, and inspected the place, and he was so struck by the neglected manner in which he found things to be and by the number of boats and the number of men who were working those boats that he saw in the place that he told me before he left that he would have no hesitation in recommending the Department to give a grant. On the 13th of January, 1904, they wrote that with regard to the plan of procedure with the County Surveyor for the harbour works if steps had not already been

taken they would be glad if we would wait a week, as they hoped within that period to be in a position to suggest a more direct line of action. The meeting of the County Council was to be held on the 21st of January. I wrote Mr. Green drawing his attention to the fact that the meeting was to be held and hurrying him up, and on the 19th of January I got this letter: "Having given the matter of procedure in pier cases due consideration we have decided as follows. No further steps can be taken until the County Council asks us officially to consider the provision of landing facilities at the places in question. Now that the merits of the case are known we are prepared, on being asked, to send our engineer to survey and make plans and specifications which would be submitted to the Council with an offer and subject to any alterations that might be mutually agreed upon." At a meeting of the County Council held on the 21st I proposed a resolution that the Department of Agriculture be requested to consider those places—"That we request the Department of Agriculture and Technical Instruction in Ireland to consider the provision of landing facilities at Cow Cove, Tralong, and Blind Harbour, and to state what contribution the Department will give towards defraying the cost of said facilities." That resolution was passed. Here is the reply as regards one of those places from the Department of Agriculture. It is dated the 14th of May, 1904, and is addressed to the Secretary to the County Council:—"Sir,—Referring to your letter of the 22nd of January and resolution of the Cork County Council therein embodied, we have to request that you will submit to your County Council the enclosed plans for improving the landing facilities at Blind Harbour, and to inform you that this Department are prepared to contribute two-thirds of the estimated cost of executing these works on condition that the County Council provide the remaining one-third, say, £274, and that the improvements are carried out under arrangements which would make it clear that it is a county undertaking."

46562. Mr. O'Kelly.—What is the legal difficulty in the way that is referred to in your précis of evidence?—I am informed that the legal difficulty is that under the Local Government Act the Department of Agriculture have not got any powers to co-operate with the County Council for the erection of this thing. I am told that that is the difficulty.

46563. Mr. Kavanagh.—You say there is a difficulty and you have not had anything further done about it?—Yes.

46564. Mr. Sutherland.—What has been the result of that?—When the Department promised two-thirds of the whole I brought the matter before the County Council, and it had to come twice before them. I brought it on in May and it had to come on again in September, and it was passed both times, and we asked for tenders for the construction of the work, and I will read to you a letter now which will explain to you fully why it was not done. It was written by the Secretary of the County Council to the Department on the 23rd of September, 1904:—"Sir,—Referring to yours of the 14th of May last in reference to the construction of a pier and suitable landing place at Blind Harbour, Skibbereen rural district, I beg to inform you that the proposals committee of the Cork County Council have approved of the plans prepared by your department and have agreed to contribute one-third of the estimated cost, namely, £822. As tenders will be considered for the execution of the work at the adjourned meeting of the proposals committee on the 5th prox. I shall be glad to receive the Department's contribution before that date." The Department did not reply to that. On the date preceding the day of the meeting, the 5th of October, the Secretary wrote again. While the Couny Council was actually sitting a wire was received: "The Department regret it is necessary to ask postponement of consideration of Blind Harbour proposals. A legal difficulty has been raised which the Department are endeavouring to have removed." That was followed by this letter on the 18th of October: "Sir,—Adverting to previous correspondence, I have to state for the information of the Cork County Council that the Department regret that the consideration of the proposed improvements at Blind Harbour must be postponed, as legal difficulties have arisen which the Department are endeavouring to overcome." They are still endeavouring to overcome those difficulties, I daresay. That was the 18th of October, 1904.

46565. Did you hear anything about it since?—I have made inquiries. The legal difficulties still exist.

46566. Do you know what they are?—I have been told that under the Local Government Act the Department has no powers to co-operate with County Councils in such matters.

46567. Mr. O'Kelly.—Or that the County Council may not spend certain sums in co-operation with the Department of Agriculture?—I rather think it is the other way about from what Mr. Exham tells me.

Most Rev. Dr. Kelly (Bishop of Ross).—The Department acts under an Act passed in 1899, the year following the Local Government Act, so it is on the part of the County Council that the difficulty arises.

Witness.—The legal adviser to the County Council says that the Council is free to pay the moment the Department pays in its contribution.

Most Rev. Dr. Kelly.—According to his view, is it not in the Local Government Act that the provision is?

Witness.—Perhaps I made a mistake in that, but my opinion already expressed remains the same.

46568. Mr. Sutherland.—It is an unsatisfactory state of affairs, anyway?—Undoubtedly. Blind Harbour is a very shallow place. When the men go out fishing they have actually to take out ballast on their backs for fifty or sixty yards to ballast their boats, and to throw that ballast overboard and wade ashore with their catches. What I say with regard to Blind Harbour also applies to Cow Cove. The Department sent two plans of improvements at Tralong to the County Council, the estimated cost of one being £1,440 and of the other £1,630, and they are prepared to pay half of those amounts, only for this unfortunate legal difficulty. In the country around there from Dunmanway, and even further north, along to the sea, there is a great deal of unreclaimed land practically useless. There are some places where the land cannot be made useful except for tree-planting, and I think that that ought to be done. Furthermore, I think it would be beneficial in more than one way. It would add to the appearance of the country, and the timber later on would be useful to us, and it would be hoped that it would have some effect on our climate also.

46569. Mr. Kavanagh.—Don't you think tree-planting might be undertaken by County Councils?—County Councils are very slow to undertake such works until the land is transferred to the tenant. Perhaps then they may be in a position to do something if they can arrange with the tenant. But it would be better that the thing would emanate from an official source. I think a Government Department in the present state of affairs could handle the thing with greater ease than the County Council could. In reference to drainage there are a lot of cut-away bogs that could be made very useful. There are hundreds and hundreds of acres lying valueless that could by reasonable outlay be made useful. As you inquired a while ago, if there was any untenanted land here that would be available for distribution. I think this land could very easily be made available for distribution, and they would be a source of employment to reclaim and also a perpetual source of employment when reclaimed.

46570. Most Rev. Dr. O'Donnell.—You would have it reclaimed for agricultural purposes?—Decidedly.

46571. You say there is land that might advantageously be reclaimed for agricultural purposes, and there are also tracts of land that would be best employed if trees were planted on them?—That is land incapable of being put into a useful state of cultivation.

46572. Mr. Kavanagh.—How long would it take before that land was made available for agricultural purposes?—It would not take very long. I have already referred to slates. The place abounds in slate quarries. The Benduff quarry embraces a half dozen quarries, and it is this kind of slate they have for miles all over the country. There are millions and millions of tons of slates there waiting to be dug up. In Glandore there were extensive mines at one time. Unfortunately they are idle for many years. People who know something about minerals say that there are plenty of minerals still lying there. The little lighthouse outside Glandore Harbour was erected by a local committee about ten years ago, and the light has been maintained altogether up to the present by contributions from the fishing boats and

July 16, 1907.

Mr. Jeremiah Hurley.

from private sources. Some months ago the energetic secretary, Mr. Callinan, got a grant from the Department. The letter is dated the 9th of May, 1906: "Sir—Adverting to your letter of the 31st March last, I have to inform you that the Department will contribute a sum of £5 for three years towards the cost of maintaining the light at Glandore Pier, on condition that it is maintained to the satisfaction of the Department." That is all the contribution we got.

46572A. Mr. O'Kelly.—What is the total expenditure on the light?—I could not be accurate as to that. The present arrangement is that it should be kept lighting for seven months of the year. The light-keeper would have to be paid, and then the light provided, which is a considerable drain on the people who contribute to the maintenance of the light. We think the Department should give a substantial grant, so that that light could be maintained all the year round.

46573. Mr. Kavanagh.—How long has it been going on?—For ten years. It was erected by a local committee first in the interests of the fishing fleet, but has become useful for more purposes than that. At that time there was nothing to show the fishing boats outside in the fishing grounds where Glandore Harbour was on a dark night. This light was erected to show where the harbour was. It has been most useful—so useful that almost everyone in the locality contributes something towards its maintenance. I was asked by the fishermen and others interested down there to impress on the Commission the great necessity which exists for giving a reasonable and fair grant towards the maintenance of that light, so that it can be maintained all the year round, and I sincerely hope that that will be done.

Captain Richard W. Cooper examined.

Captain Richard W. Cooper.

46574. Mr. Kavanagh.—You represent the Landowners' Convention?—Yes. I am not a member of them. I was asked merely to attend as a farmer. I am simply a farmer and nothing else. I have been farming in Cork for twenty-five years.

46575. What district is that in?—Ballinrea. I live in the Douglas portion of the Cork union, about four miles from Monkstown and twelve from Kinsale.

46576. You are not in a congested district?—No. I have attended more to show the great injustice that would be done to us in the South here by splitting up the grazing lands to any extent. The cattle trade in my part of the country is depending on two markets—the English and the up-country. From soon after Christmas until the English market opens we are kept going by the up-country man entirely. That is, the graziers come down from the upper country and buy our store cattle, and take them away to Kildare, Meath, Westmeath, and other counties. We buy them from all round this part of the country. We keep them until they are fit to go forward.

46577. Mr. Kavanagh.—At what age do you buy them?—I buy them for forward year-and-a-halfs to two-year-olds. My farm is a mixed farm. I sell my cattle chiefly fat, but I am talking of the small farmers round me, who depend entirely on those two markets for selling store cattle.

46577A. At what age do the graziers buy them?—Generally at one-and-a-half year old. From that to two and three years old. It all depends on the part of the country it is taken on to. As a small illustration of the movement of cattle in Ireland, a farm fell into my father's hands in Tipperary. I bought about sixty or seventy cattle in fairs round here—Bandon, Kinsale, Ballinhassig—and sent them up. They were one-and-a-half-year-olds, and cost about £6 to £7. They stayed on the Tipperary farm a year, and did well. My father and I valued them then at £12 10*s*., and he then took them on to his farm in Westmeath, and they were sold out the following November fat, and they went, I think, at from £19 5*s*. to £19 10*s*. That is the history of our cattle trade down there. As regards the up-countrymen it applies to it all. I know a part of the County Westmeath. The objection to breaking up the grass lands is not so much a question of how it will affect the people there, but the certainty that that land when laid down will be worth perhaps half its value. Our whole object in farming here is to get land into grass, into heart. If we can do that we can do anything with it. We can raise our dairy stock. Cork is a great dairy country. The City of Cork depends on milk. Cows won't give milk unless you get the land into heart. I raise about sixty acres of oats. The reason I till is not so much for the purposes of the crop as to renew my land and get it back into grass and into good heart. I only break up land to renew it. There is land in Westmeath that I know, and if you put cattle on it you will see the bullocks fatten; but if you break that up you will see that the bullocks won't fatten. It simply goes back, and you will have to take years to get that land back into heart. The land I am talking about has not been broken in the memory of man. I remember as a boy seeing a field of this land broken by a Scotch steward. I remember an old man saying to me, "It won't be the better of that for forty years," and the field speaks for itself. It is in my brother's possession now. It is a forty-acre field. I remember this Scotchman breaking it. I also remember my father having oats in his study that were cut off it, about six feet high—most beautiful oats to look at. From that day to this that field is only a store field. It has never been able to fatten a bullock since. This Scotchman, who did not know anything about farming in this country, came and said that the land wanted breaking. It had a fog on it. I suppose it was a natural production of the grass. He said it was all fog, and must be broken.

46578. Most Rev. Dr. O'Donnell.—How many crops did he take off it?—He only took one crop and then he con-acred it out in potatoes the following year, and then he laid it down.

46579. Is breaking the land in any event a good system that should be pursued?—The object of breaking the land is to get it into heart. We don't ever break land down here for any other purpose. That is, good farmers do not. The poor fellow who is struggling may do it to get a crop off it to get the money, but if he does the land pays for it.

46580-1. You know Meath?—I have been over portion of Meath.

46582. Don't you consider that there are large tracts in the County Meath that are in great need of being broken up?—Not what they call fattening tracts.

46583. Let us put the fattening tracts on one side—first class land; let us take second and third class land; from the economic point of view would not it be much better to have it under a good system of tillage?—For the purpose of renewing it and getting it back into heart if you consider it out of heart.

46584. Apart from that altogether, merely to get the best return out of the soil, is not it better to have that land under tillage?—Because the return on tillage is very poor; you get such a poor price for oats and barley. I remember growing barley one year. I never grew it again because I saw the terrible thing that might happen me. I went to Mr. Lane, the brewer, and he bought my barley, and he paid me fourteen shillings a barrel, that is seven shillings a cwt. After he bought it he shook out on the counter beautiful-looking barley, and said, "Do you know where that comes from? That comes from Odessa. I have been offered a cargo of that, delivered in Cork at 3*s*. 6*d*. a cwt., or 7*s*. a barrel."

46585-6. I don't know whether it was Mr. M'Clure who gave evidence on behalf of the Landowners' Convention, but some such witness told us when I asked him on this very subject, that in his opinion the land which was not fattening land would, under a judicious system of tillage, produce far more than it would under grass?—To get a judicious system of tillage you must in the first place only till according to your requirements, because to get a judicious system of tillage in the first year you break a field for oats. In the next year you must manure that field under a crop that takes manure like turnips. But if you went and put a second crop of oats into it probably that field would never get the better of it.

46587. Do you know of the seven years' system which is pursued in the North of Ireland?—No.

46588. You have two or three years' grass in that

system in the course of the tillage. Would you be surprised to hear that the farmers working that land would not dream of turning it to grass as a means of earning a livelihood?—Perhaps it would not be good enough to fatten cattle.

46589. It would not?—But the land I refer to is good enough to do that.

46590. Do you not think that if the land which is not of prime quality for fattening cattle all through the country were divided up into moderate-sized holdings and cultivated under a mixed system of tillage that the avenus for your cattle would be a wider one than it is now for your store cattle?—I would not think so, because the people you contemplate bringing in are really very little better than labourers. I consider that farming is a very high art in this country. I consider that a great many of the men you would probably bring in would not know how to handle a plough even.

46591. That is a somewhat different question, if I may say so. No one who would contemplate a great change in the use of Irish land, taking it from a grass into a tillage system, would dream of that except under a very improved system of tillage, such as is pursued on the Continent?—It would want to be; but the men coming from these congested districts would have very little knowledge of that.

46592. Assuming that there is a good system of tillage pursued under competent practical direction, do you, from the economic point of view, the point of view of the best use of land, think that it would be better to have inferior land at all events under a system of tillage?—If you could be sure of the price of the produce you grow. I have known oats as low as four shillings a cwt. in Cork; that is £4 a ton. At the present moment I think black oats have gone up to about 6*s.* 1*d.* or 6*s.* 2*d.* If you could be sure of that price I think it would pay, but if it comes down to four shillings it would hardly pay the cost of labour on the land.

46593. Your main contention is that if lands are broken up that are now grazed upon it would be difficult for small occupiers in a county like Cork to be able to dispose of their young stores?—If it was broken up to any extent.

46594. Suppose this second and third class land in Meath and Westmeath is broken do you not see that the green crops produced would be available right away for the in-feeding of cattle, and these men whose land is not quite good enough for fattening would then be able, besides the cattle they raised themselves, to take a good many cattle for stall-feeding?—My experience of stall-feeding is that it is a dead loss. I don't stall-feed now. I had to give it up. Suppose you buy a bullock in October or November for the stall; he is five cwt. You put him in the stall for three months. You cannot feed him under ten shillings a week. That is £6 on to his cost, and if you get the ordinary price at the end of it, that is fifty shillings a cwt., you would not have much profit.

46595. The small farmer would have many advantages. Holding a moderate-sized farm he would work it with the help of his family. It would give employment to his family, and with a little hired labour the farmer would be able to find means of employing hands on such a farm when otherwise they would remain idle?—In my part of the country the farmers' children can get employment. They do get employment. They don't like doing farm work. It is very natural. All round Carrigaline the girls do lace work. A girl who does lace work does not like doing labouring work. Although they would do it as a compliment for me I would not ask them unless very hard pressed. I am loth to ask a lot of them to do it, knowing that the thorns and thistles in their hands would be detrimental to their work afterwards. The lace-making pays them better than the farm work.

46596. It is only such work as hay-making you would propose on a farm for girls?—Thinning turnips and work like that. But they don't like it. It is very dirty work on the fingers.

46597. You rather like to see the people having tastes that way in the direction of the care of their persons?—Exactly.

46598. On the other hand if a housekeeper goes through the rough work of a household, then, when she wishes to wash her hands, she can manage to be very presentable; is not that so?—Undoubtedly; but there is a great difference between household work and working in the fields, because in the fields they ruin their hands for lace-making work.

46599. No doubt there is a certain quality of the hand which is improved by heredity in those things, such as the making of beautiful embroidery?—Crochet and lace-making are the chief things they do around me, and very well they do it, too.

46600. But, coming back to what we were at, don't you think that the children, especially the boys, would be greatly influenced in the direction of devoting their energies to the land and the farms if our National schools, instead of giving no training in agriculture, practical or theoretical, gave a suitable training to the boys from their early years, and had little agricultural farms or plots attached to the schools?—I think that the greatest benefit that could happen to the agricultural boys in the community would be if they were taught to be handy men; if they could have carpenter's benches, or do mason's, slator's, plumber's, or any kind of handy work. It would certainly be the greatest boon to them going to America to be able to go into a trade and be able to earn double the money. I was in America as a young man, and I mixed with all sorts and conditions of men. I have worked as a farm labourer in America, from 4 o'clock in the morning until 8 o'clock at night, ploughing.

46601. Labour is becoming to a man?—Honest labour is no crime. If I could have done any handy work such as that of a blacksmith or a carpenter I could have earned double the amount per day.

46602. Don't you think, as an Irish farmer also, it would be a great matter that every Irish farmer should be able to make his own gate or his own barrow?—Undoubtedly, but very often the young Irish farmer thinks it *infra dig.* to work. If his father is a fairly prosperous man you see the young fellow, instead of taking a hand at the work—what I ought to be doing perhaps to-day, making hay at home—they don't do it. I am in Cork about twenty-five years. When I first came here I drove on a mowing machine because I was short-handed. I drove it for the day. I remember a farmer near me, a very small man as regards the number of acres in comparison with myself, said "I wonder you were not ashamed of yourself to be doing that kind of work." I said, "Don't you think it is better to be doing that kind of thing than sitting in a publichouse, perhaps, doing nothing," as he had been doing half the day.

46603. Don't you think that such a training in National schools would have the effect of making people like farming more than they do?—I think it would train them better. I think it is the mothers of the boys who are more to blame than the fathers. They will take to work if they are trained. I think if you could get local people to interest themselves in them it would do a tremendous lot of good.

46604. Mr. KAVANAGH.—Your argument is that if grass lands are cut up it would destroy the trade of the small farmer in this country?—To a great extent. We are depending on the markets. Take the case of farmers with fifty acres of land around the City of Cork, where I live.

46605. I am talking of small farmers?—We consider a man a small farmer in Ireland who has only fifty acres of land. It is only worth from ten shillings to £1 an acre. He will keep three, or four, or five cows, and sell their produce in the form of butter or milk. He will rear two calves for each cow with milk and a little extra stuff added. At the end of the year he will have six, eight, ten, or twelve calves for his rent, and those calves must be sold as one-and-a-half-year-olds to make room for the calves coming on. Otherwise he would be blocked. His market to sell those one-and-a-half-year-olds in the first go off is the up countrymen who take them for a year until they are two-and-a-half-years old. Then the up countryman can shove them on to land that will fatten them, and by the end of November they can be shipped to England and finished.

46606. It is only the period between the one-and-a-half and the two-year-olds that we have to get rid of. Suppose we cut up, in the midlands, some of the second class land—I don't suggest for a moment that we should touch the first class land—we have only a year in which the difficulty could occur, between the time when the animal is a store going at one-and-a-half year's old and the time when it is going as a two-and-a-half year's old to Meath. It is suggested that farmers in this country would soon

July 16, 1907

Captain Richard W. Cooper.

adapt themselves to the change. They would probably have to keep these stores one year more?—They have to push these out to bring on the others. You can only keep a limited number of cows on a farm. If he keeps six dairy cows, then, when the new calves come on he must make room for them.

46607. That is if the present system of farming went on; but don't you think that farmers are quite wise enough to adapt themselves to the new system of farming. Suppose they see they cannot sell stores at one-and-a-half year's old don't you think they would change their system and keep their stores to two-and-a-half-years?—The farmers around me would not change their system. If they did change their system they would keep more dairy cows and rear more calves, but if that is to be done the calves must be pushed out at one-and-a-half years old.

46608. Most Rev. Dr. O'Donnell.—Or it might mean that a farmer should till more of his land?—We don't want more tillage than we can help. We have a foreign market up beside us. French straw is brought into our market at £2 15s. a ton. We have to sell our best straw at £3 a ton. We have to pay our rent, taxes, and soforth.

46609. Mr. Kavanagh.—I think you will find that the small farmers of this country would soon adapt themselves to the new order of things?—I don't quite follow you.

46610. Increase your tillage and that would enable you to keep your store cattle a little longer?—Then you would have to reduce the number of dairy cows, and butter and milk pay better than tillage.

46611. Mr. Sutherland.—They require less labour. You are perfectly consistent in your theory. You look upon tillage as an evil in itself?—Where we are so open to foreign competition I look upon it as a great gamble.

46612. Keeping that in view your evidence is not intelligible unless you assume that the less you till the better?—The less you till the better.

46613. Therefore to have no tillage at all is the best state of all?—If your land can stand without tillage, certainly it is, because it means that it is fattening land and that is its right employment.

46614. That is the gist of your evidence?—It is. As regards Canadian cattle, I don't think it is so much a question of protection if these cattle come in, but the fear we have is we want protection from the disease. Between Canada and the United States there is a border line. If there was a border line between Kerry and Cork, and there was a better market for my cattle in Kerry than in Cork, I would find a way of sending them over that border line. It is the same way in America with regard to the United States and Canada, and the United States is full of disease, and there is a border line of 3,000 miles between them which could be easily got across. Take any city like Cork or Dublin. If their milk supply was cut off for twenty-four hours what would be their position and what would become of the children? It is a matter more for citizens and city people than for people farming in this country. It would be a terrible thing if the milk were cut off from the cities. In my opinion disease would be in like a shot, not from Canada, but from the States.

46615. Mr. Kavanagh.—You don't think the importation would affect the price of store cattle at home?—I don't think it would. It would affect the price of dropped calves, as it did before. What I noticed before was that it affected the price of dropped calves, which fell. The result was then that they gave up rearing the calves to the same extent and kept more dairy cows. They sold then for 4*s.* 6*d.* calves which they would sell now for 25 shillings.

46616. The great danger is the disease?—Yes. If the people in the cities were cut off from milk it would affect the poor children more than anything else.

Mr. John T. Carroll examined.

Mr. John T. Carroll.

46617. Mr. Kavanagh.—You are Secretary to the County Committee of Agriculture?—Yes. As regards finances, I have a little booklet which shows how they distribute the money here. From it it will be seen that two-thirds of the nominations in the case of mares and cows are given to farmers, cottagers, and so forth in the lower valuations, £25 in the West and £50 in the East Riding. The mare nominations are distributed *pro rata* over the rural districts of the county, but as this was considered to work unfavourably to the poorer districts the County Committee agreed some couple of years ago to the suggestion of the Bishop of Ross, whereby, in addition to rateable valuation on land only (excluding other hereditaments) the number of working horses in each district was also taken into account as a basis of distributions. This almost doubled the nominations in some of the poorer districts.

46618. We had evidence yesterday that in the congested districts around Schull there was a very small proportion in comparison with the whole of Cork?—It was almost double what it would have been if we had stuck to the original basis of rateable value, but instead of that we took it on the suggestion of the Bishop of Ross on the number of horses in the district. With regard to bull premiums, I produce a map showing the location of the premium bulls at present in the county, three of which are subsidised by the Department directly and the rest out of the Joint Fund. It will be observed that the poorer districts along the south and south-west are pretty well served. Eighteen bulls are in, or in the neighbourhood of, congested districts. The greater number have been bought under the Department's Loan Scheme, viz., one-third of price down and two years to pay balance at 2½ per cent. We have found a difficulty in getting the people in some of the poorer districts to understand about the loan system, but it is gradually being understood and availed of.

46619. What kind of bulls are those?—Shorthorn bulls chiefly.

46620. Is there no demand for any other?—There are a few of the Polled Angus. With regard to boar premiums on the map I also show the location of premium boars in the county, the number of which would be materially increased but for the difficulty of obtaining suitable animals. Six of the sixteen subsidised are in congested areas, and as the pig-rearing is pre-eminently suitable for the poorer districts, where family help is largely available, it is the intention of the County Committee to avail of the increasing opportunities which the establishing of suitable herds at Carrara Agricultural Station has given for procuring the best class of boars for the poorer districts. Besides foregoing assistance to improvement in live stock the County Committee give £700 in grants to local shows annually, viz., £200 to Cork Show, £65 each to Clonakilty, Skibbereen, Bandon, Mallow, Coachford, and Midleton, £25 to the Cork Poultry Show, and £90 for small butter and poultry shows in places remote from these centres. Those latter shows generally finish up a month's course of lectures in one or more districts, and create great local interest, besides leaving a permanent impression on those who attended the classes. The best of those in the county was held two years in succession at Bantry, which embraced several of the congested areas. I attach great importance to those six county shows, as they cater for local requirements, arouse interest in people who would not attend a big central show, and I am aware that they have had a very material effect in grading up the cattle in their neighbourhood. We make it a condition of the grant that special provision must be made in the prize list for farmers of low valuation (the limit to suit the particular locality), and they must also have classes for poultry, which are particularly applicable to the poorer districts. As an evidence of the interest taken by the poorer classes in these schemes I may instance Ballinhassig (midway between Kinsale and Cork), where a few years ago there were not two dozen pure-bred fowl. We were fortunate in having one of the local station-holders energetic, and after a couple of improving shows we had over 600 entries at last year's attempt—chiefly owned by labourers' wives, and the Department bought a considerable share for stock purposes in other counties. In reference to agricultural schemes we employ two poultry, two dairy, and two agricultural class instructors, and one instructor in horticulture and bee-keeping.

46621. Most Rev. Dr. O'Donnell.—Would you just say how the farms are divided so as to secure

the prizes at shows?—£25 would, I think, be about the fair average for the smaller valuations. In some classes in Skibbereen they have them as low as £15. The valuation is variable in various parts of the county.

46623. The man with a valuation under £10 would have some difficulty in competing with the people whose value is £20 and £30?—Certainly. That is dealt with locally.

46624. You think that the people in the locality would have practically a decisive voice in making these divisions?—Certainly. We always allow them.

46625. Mr. KAVANAGH.—Have you any special prizes for congested districts?—No. In reference to poultry, we have 54 egg distributing stations in the county, besides 40 turkey and 20 geese stations, from which eggs of pure-bred fowl can be had at cheap rates. I expect that the eggs sold from those stations this year will have amounted to 80,000. About 20 of those are either in or within easy reach of congested areas. As regards lectures, while paying due regard to date of application for instructors' services special favour is given to poorer districts. The Poultry Instructor for West Cork spent practically all of last year and the early months of this in the Castletown peninsula and in Schull and Bantry districts. In reference to butter-making, all the congested portions of the county have been visited with the exception of the Castletown district, where the West Cork Instructress is soon due. The Instructress spends about a month in each district, takes in from six to twelve pupils who attend daily and go through the whole routine of separating and butter-making. In the intervals the Instructress visits private dairies where asked and uses the home appliances. Coming to horticulture and bee-keeping, we have sixteen demonstration plots in the county which are under the superintendence of the County Horticulturist, but besides these he makes it his special business to visit cottagers and small farmers. The demand for his services is entirely beyond the work of one man, and we must undoubtedly make provision for a second in October, when annual schemes are being revised. This will enable us to go more systematically to work and to show tangible results in one district before proceeding to another, as we find that unless the Instructor can come around again and again to the same place it is impossible to keep up interest sufficiently long to have left a permanent impression. A great help to the poultry and horticultural industry, as the want of it has been a drawback, is the establishment of a central market in Cork. The Department have earmarked a sum of £500 for making the necessary alterations in a suitable site in the Corn Exchange. The Corporation refused on a previous occasion, but they may change their mind now. My next head is agricultural instruction. Lectures are delivered during the winter and early spring months at suitable centres, and visits paid between whiles to farms in the neighbourhood. Over 250 demonstration plots are arranged in various kinds of crops and manures in suitable localities, and some opinions as to what farmers think of them will be found at pp. 5, 9, and 20 of accompanying report, 2,000 copies of which have been printed and circulated through the medium of local shows, which our Instructors attend, District Councils, etc. Of the 117 demonstration plots in West Riding of the County this year 80 plots (or nearly 69 per cent.) are in congested districts. I have noticed in reading reports of the Commission that some witnesses are inclined to discredit the usefulness of Agricultural Itinerant Instructors. This does not agree with my experience, either personal or hearsay. In several parts of the county farmers are afraid to grow lea oats, because of the wire-worm, and when they do grow it they are satisfied with comparatively poor results. I find in dealing with the wire-worm that discretion is the better part of valour, and I get the crop to run away from him by the judicious application of artificial top-dressing. The objection is often raised that top-dressing exhausts the land. In one of my fields, adjoining a railway, I have been deliberately growing lea oats year after year for some time past just to remove this impression in my locality, and, I am glad to say, with good results. I am very confident that the 80 demonstration plots in West Cork this year will do good work. I think, however, itinerant instruction of this class might be very advantageously supplemented in the poorer districts by a system of resident instructors, localised centrally in a small model farm, which could also be used as a storehouse for the distribution on loan, or, where needed, on sale at cost price, of sprayers, and spraying materials, etc., and also for the distribution of boars and other animals from other Departmental institutions. I have applications by the dozen for all such necessaries, and I think resident instructors, such as I suggest, could deal very efficiently and usefully with them.

46626. Most Rev. Dr. O'DONNELL.—That would make the system quite practicable?—Yes. This system would also have the merit of continuity, which is especially necessary in dealing with the poorer districts. First attempts at instruction only create a mild interest and must be followed up by constant hammering in of hard facts before any good can be done. I have often posted a leaflet on charlock-spraying to the owner of a "preshaugh" cornfield, which I noticed when travelling by train, or get off my bicycle for a similar purpose, but I am very certain a man on the spot who had his knapsack in the adjoining store and wasn't above using it would get more credit and leave a more lasting impression. I may now refer to our system of farm prizes. This year we have arranged a trial scheme of prizes for large farms, chiefly on the basis of a revival of tillage and home consumption of farm products, and have 124 entries, which we consider satisfactory for a first year's trial. In addition we contribute £270 to the Munster Dairy School Governors, who, in this county, have charge of a scheme of prizes for cottagers and small farmers (under £15 valuation). The number of entries this year is 166. We also have a system of agricultural class instruction. During the period from October to March we employ two agricultural class instructors who teach science as applied to agriculture in six centres in the county. Train centres have hitherto been selected, but we hope soon to get into more remote places and work up the county systematically. Those classes have been very successful and popular.

46627. I think it would be an advantage if you would enlarge for us on the scheme which you have devised for encouraging tillage?—Unfortunately I did not bring the scheme with me, but the Bishop of Ross framed the whole of it.

46628. This is the first year?—Yes. There are to be three inspections. One has taken place. Professor Carroll has made one and will make two more, because this involves a system of accounts, and keeping of books, and also to see at the end of the year how much of the farm produce they have consumed on the farm.

46629. We had a complaint yesterday that the small man was not able to compete in these classes as well as the large man. Is not the only condition that he should till one-fifth of his holding?—Yes, that condition is indispensable, but in addition we have a scheme called the Munster Dairy School scheme. We give the Governors a grant of £270. They have a special class dealing with valuations of from £15 down.

46630. Most Rev. Dr. KELLY.—The farm prizes are confined to men above a valuation of £15?—If they have a valuation below £15 they cannot compete for these prizes at all. There is another system of prizes, less valuable prizes, both for cottagers and small farmers. The men of £10 valuation must compete if they compete at all for those inferior ones. It was I that brought the matter before the Department. The whole object of having the large valuation was to try to bring the large farms under tillage. With regard to small farms, they already have a reasonable amount of tillage. If you take a man with ten acres you will find that he has already two or three acres tilled. But if you go to the man with 500 acres, like the man Mr. Sheehy referred to, you will find that he has not an acre of tillage on the whole 500. The result is that the whole farm is going absolutely wild. If you go up to the County Limerick to one of these large farms with thirty or forty milch cows you will find he has half an acre of tillage. It is the big farmers who are the sinners, and it is the big farmers we want to get at. Consequently we have set down three classes of prizes. We have divided the county into three sections. As far as we could we put the land of the same class together We made one section of the very good land. We made another section of the land where Captain

July 16, 1907.

Mr. John T. Carroll.

Cooper lives. The very district that Captain Cooper lives in is a great tillage district. The Chairman of our County Council lives in that district. There are good tillage farmers all around Carrigaline in spite of Captain Cooper. Our first section is for men between £15 and £40 valuation. In order to equalise the conditions of competition, say, between a man of £20 valuation and one of £39 valuation the condition is laid down that each man must have one-fifth of his arable land under tillage. We exclude the land that is not arable, but then if he has a higher proportion than one-fifth that is a point in his favour. Then the produce must, as far as possible, be consumed on the farm, both by the family and by the animals, and the more produce that is consumed on the place the more it counts in his favour. He has to make a return of these particulars. Hence the necessity for three inspections. It is not merely in order to see the crop growing, but the inspector will have to come on the land in the late winter or early spring to see what crop has been consumed. The more consumed by the family in the way of growing their own wheat and their own oatmeal to make porridge, and their own vegetables, and consumed by the animals, feeding the milch cows and fattening cattle, notwithstanding Captain Cooper's views about fattening cattle, which are rather peculiar, because all the Scotch and English farmers live by fattening them or stall-feeding them. The more consumed on the farm itself the greater the point in his favour and *vice versa*, the less he purchases, the less French straw he purchases and the less German peat litter he purchases the greater the credit that is given him. He has to show his accounts, both what he consumes and what he purchases from the outside. A chief object is to keep on the soil and send back to it what is taken out of it, because under the grazing system the land is going down. We have very little lime in West Cork. Constantly raising store cattle we are sending away in the bones of the cattle the little lime we have and so we are destroying the land. It was said to me, "You are the author, the inventor of a scheme which none of your own people can touch." It does not suit my district very well, but it suits other people outside. A great number of my people are excluded, because they are under £15 valuation. There is a great difference in the value of the prizes, because the prizes under the big farms scheme include three of £30, three of £25, nine of £18, and so on, down to £9. The prizes run from £9 to £30. Altogether £474 comes in.

46631. Most Rev. Dr. O'Donnell.—It is avowedly a scheme for encouraging tillage on large farms. As Dr. Kelly has said the big farmers are the sinners. The small farmers till a reasonable amount. They must do it. The big farmer can live by grazing. If he gets only ten shillings an acre and has 500 acres he gets £250 and can live on it, whereas a man with only ten acres could not live on it if he only got ten shillings an acre?—The Fertilisers and Feeding Stuffs Act has been put very extensively into operation in this county and with good results, especially to the poorer classes, who are generally in the merchants' books and afraid to take action in consequence. I am sorry the Act of last year is a poor substitute for its predecessor. In reference to veterinary instruction perhaps I might refer slightly, too, to the great need in congested areas of some system of veterinary relief. There are only fifteen veterinary surgeons in the County Cork (outside the city), or less than one to every 7,000 farmsteads. The nearest veterinary surgeons to Castletown is sixty miles away, and there isn't a single one in a line of country from Cork City to Killarney. It would be important if some system could be adopted which would induce members of the veterinary profession to settle down in some of these places. I should have stated that one of the great needs of having a few resident instructors in the poorer districts is on account of the terrible amount of rubbishy seeds sold there, and I fear that a great deal of imported stuffs, which go through Cork into Kerry, find their way back again to the poorer parts of this county. Our instructors avail of every opportunity to advise against this practice, but it is apparently forgotten before they get around again. The poorer districts are the happy hunting grounds for some Liverpool and Manchester calf meal manufacturers, whose price varies from three to four times its value, according to the gullibility of the victims. I might mention, as showing the good intentions of our wise legislators, and how they work out in practice in this country that by the simple insertion of one little word in the 1906 Act they have expressly saved fraudulent calf meal manufacturers from any legal liability for their misdeeds. The 1906 Act states that all food stuffs (unless mixed) must state the food, flesh and fat formers they contain. Calf meals are, of course, mixed, and consequently outside the Act. I have myself availed of small butter and poultry shows, and every possible occasion to hammer this into the heads of the poorer farmers, but though the price charged seems to be on the down grade a considerable lot of the stuff is still coming into the country and finding its way to those most difficult to get at in the way of instruction. We had great difficulty the first few years until the Department took over the working of the congested areas in avoiding duplications and complications of all kinds. On account of the intermixing of the two areas it was very confusing both to the County Committee and the people as to whom to avoid and whom to serve, and be as careful as we could I am afraid we made more than one mistake. I have no personal knowledge of the working or the methods of the Congested Districts Board in their own districts, but I fear, as might naturally be expected from a centralised governing body dealing directly with unformed and mostly apathetic units, that, agriculturally speaking, there are no permanent results shown. A central institution, departmental or otherwise, dealing directly with parish committees may have as many good intentions as the King's Speech, but for want of decentralising administration through local representative but connected channels I fear the parallel can be extended further. There is also a difficulty in getting people who are used to anything approaching a spoon-feeding system of administration to take any initiative in matters involving an element of risk or responsibility, such as the purchase of a bull, boar, or the requisites for an egg-distributing station, even though the Department's loan system makes things easy enough for very small capital, and only for the energy displayed by the priests in urging them on and overcoming excessive caution matters would be almost hopeless. However, I believe things are on the mend, and with time and its inevitable reforms, and a pretty fair share of Job's characteristic, and money, much may be hoped for in the course of a few years. As regards money, I may mention that ½*d.* in the pound on the congested districts in this county only comes to about £100 a year, which we expend in premiums to bulls alone in those areas.

46632. Have you any experience of the working of the parish committees?—No, but what I mean would be more local committees. I don't think it is exactly the same meaning that the Congested Districts Board give it. I cannot get them to work it and it is the priests I get to work all that for me.

46633. When the priest takes a strong, leading part things go well with the local committees?—Yes, very well.

46634. I suppose you find that co-operation is not refused on the part of the clergy?—Never.

46635. A parish committee is manned by the very best men in each parish to a large extent. It is an elected body. As a rule they get a minimum of four times as much work done as the grant which they receive. Would not you consider that that is a good work?—Certainly.

46636. They have local initiative. I might say that the parish committee is Home Rule as far as the administration of its grant goes. With reference to the agricultural work, when it was under the Congested Districts Board you will find, I think, that the Board made arrangements to suit the districts, so as to enable comparatively poor people to get hold of these animals?—Yes, and as a result I find that there is no chance of getting the people to buy under any system now. They wait for the same system to be adopted. They ask to have the animals sent free.

46637. They did not get them free before?—They suggest something to that effect to me.

46638. Would not it be your impression that the poor districts require more help than the better-off districts?—There is no question about it.

46639. Suppose that the money available for the county was not touched and that from a central body

like the Department subsidiary grants were made available for the special requirements of the poor areas and administered by the county committee through perhaps a local committee knowing exactly the local wants?—That would be admirable. The Department have made special payments for subsidiary schemes, but there is not anything approaching the amount that would be needed for these schemes. I may here read a letter from the largest manufacturers of artificial manures in the United Kingdom:—"In answer to yours of yesterday there has been a steady increase in the consumption of manufactured fertilisers since 1902, last year, 1906, being the largest on record. The past season now closing shows a slight decrease compared with 1906. This decrease is principally in the topdressing of grass owing to the unfavourable weather at the beginning of the season. There has been a marked increase in the demand for the better qualities of superphosphate and complete manures during the last three years, which we attribute very largely to the information and advice which the farmers are now receiving from the County Council lectures."

46640. Mr. KAVANAGH.—Cork is a great dairy county?—It is.

46641. Are there many creameries?—There is a considerable number in some places, and none in others. Cork is practically several counties. There are so many different classes of land that it is equivalent to several counties.

46642. Are the creameries chiefly co-operative or private?—Chiefly co-operative.

46643. Do you find that tillage decreases wherever a creamery is?—I don't think so. In my own immediate neighbourhood there are several creameries. I know if I was not Secretary to the County Committee I could be in for this scheme which his lordship suggested as well as my neighbours. I till considerably more than one-fifth of my place.

46644. The opinion was expressed that the price of the milk was so much better that it was cheaper to have all dairy cows?—It does not necessarily follow that you would not have tillage and dairying going on, too. In fact, without tillage you cannot have winter dairying, which must be developed if we wish to hold on to the British markets.

Rev. Precentor TOWNSEND examined.

Rev. Precentor Townsend.

46645. Mr. KAVANAGH.—You have been nominated by the Bishop of Cork?—Yes. I have been several years farming land in this district, so that I am accustomed to the way of farming. I have tried to promote farming and tillage by trying to give land to schools for school farms, but I found that the parents would not avail themselves of it. They said their boys would be only working for the benefit of the schoolmaster, and I did not succeed. But as a general rule, I want to say I am very grateful to the Board for a great deal of work done as regards tracts and papers. It is very hard for the public to get at them. They should have some depot in a country town, especially like Skibbereen, where the people would know they would get these tracts for a penny or so. The land in this part of Cork is generally a light moory soil on a clay slate foundation. There are patches where the red sandstone comes in. The union of the two makes a better soil, and butter from such soil gets a halfpenny more in the market than it does on the clay slate farms. Generally the land is divided into small fields with rocky uneven surface. Under these circumstances every farmer will tell you that tillage does not pay. I may say that tillage does not pay, because they don't know how to make it pay. I worked a great deal of tillage farming. In all this district around here you cannot use advanced machinery to any large extent. You cannot bring in double-furrowed ploughs. You cannot bring in reaping and binding machines. A great deal must be done by manual labour. That class of tillage must die out. My opinion of the work of the people, especially around to the West, is that the land must lapse into grazing more or less. To illustrate what I mean about the difficulty of such tillage as they practise, I may mention that it takes a man, say, two days to plough and manure an acre of land for a potato crop; three days to "hack" it by hand to make a smooth level surface; it takes two days at least setting the potatoes; at least two days more earthing the potatoes after they have been planted; from four to six days for second earthing. So that a very hard-working industrious farmer doing his own work does not on an average plant an acre of potatoes without giving at least ten to fifteen days' manual labour, in addition to the horse labour. If those people would only work with a chill plough and turn up the soil and make the drills they would do it in less than quarter the time.

46646. Do they all make lazy beds?—Almost universally. I hardly see in any place drills except in a few places near Clonakilty, where there is a large area near the sea on which they have them.

46647. Is it for drainage purposes that they have the lazy beds?—In very rough, rocky little spots, but on the average land it is not for drainage purposes. That is the way they have been accustomed to.

46648. There must be some reason for it?—It is only tradition, but I have practised tillage with the plough in my district for forty years, and I have found no difficulty in it. I got better crops than my neighbours, and got prizes at a good many shows; but that, I think, is for the better class of lands round here. A great deal of this rough ground from here to the west you cannot improve by high class tillage. You want a better system of irrigation; you want to teach them the way to improve grass lands. You want to feed with cake by giving cattle cake on the ground, and making fattening land of perhaps only very poor pasture land. That is a class of instruction that I don't think is given in the agricultural schools. It is not given as a rule. They all go in for high-class tillage suited to fine large fields and large areas of deep soil. That does not suit this country. It is the same way with cattle. Forty years ago you never saw lambs in the early market here before June or July. About that time my father brought a good many Leicester sheep into the country. They were too delicate. Then I took the common sheep of the country, a kind of cheviot, bought ewes in October, and I gave them the South Down ram, and I could make 300 per cent. profit on the sheep that way, by rearing the lambs to April, and selling them at from thirty to thirty-five shillings apiece. Soon after the balance were sold for twenty-five shillings in June, and the ewes in August for fifty shillings. In consequence of that the local fair of July died out, and many lambs are sold in Clonakilty fair in May. That little bit of farming succeeded very well, and as a practical way of improving that country was a great success. You could see thousands of such lambs in the country now. Thirty years ago you would seldom see one sooner than July. So my experience leads me to believe that for this particular class of country you want a particular class of agriculture—not the agriculture of the great deep lands. It is the same way with cattle. Shorthorn cattle are rather delicate for this country. They are very bad milkers. the pure shorthorn cows as a rule cannot rear their own calves. They have to get a second cow to be a nurse to the calf. I think attention should be paid to the milking qualities of the cows. A tenant farmer wants bullocks that will sell in the English market, big steers that will sell well, and he also wants cows for his own dairy. If you have got shorthorn bulls you will get very fine prices in the English market, but for milkers you must get some of the old Irish cows. It is the same with the Aberdeen-Angus. They are very hardy cattle, and very well suited to this country; but most unfortunately around here the Aberdeen-Angus they have got are the worst milkers in the country. They have a very bad name, and farmers are prejudiced against them. Forty or fifty years ago the late Mr. William Owens, of Blessington, introduced the Aberdeen-Angus. They got prizes at the Dublin Show. They were the best milkers I ever saw. He had them publicly tested against the best Ayrshires, the best Kerries, and the best milkers from anywhere, but, like the shorthorns, some are and some are not of a milking strain. I respectfully submit that the Congested Districts

July 16, 1907.

Rev. Precentor Townsend.

Board should apply their attention to giving us a milking race of cattle here. There was a breed of cattle fifty years ago, Dutch cattle, white-faced, large-framed black cattle. It was said they were remarkably good milkers. I take it the practical way of improving farmers would be by giving attention to these things. As far as I can see, no attention is being paid to them at the present day. Attention is given chiefly to producing cattle that bring a good price for fattening, but there is no attention paid to having good milkers. If you cannot have two strings to your bow you cannot succeed in farming. There is a point that tends very largely to emigration here. That is the condition of the labourers' cottages. They were introduced as a great boon to the labourers. In many ways they have been a great boon to them. The system is that the cottages are put up utterly irrespective of the farms on which they are placed. They are a separate property. If one is put on my farm I have no possibility of knowing whether I can get that particular man to work for me in time of stress, and he cannot be sure of regular work in winter. The labourers in these cottages first got half an acre of ground, and after they had it a few years they wore it out with successive potato crops, and it was of little value to them. Then he got an acre, but with similar results, whereas formerly he had a cottage —it was a very bad one, and an entirely different acre of land from the farmer every year on which to plant his potatoes. He was a labourer attached to that particular farm on whose services the farmer could count. I am not going into the question of wages or anything of that sort. A farmer who wants three or four labourers now has to go to market every other day to hire a man. I think this may succeed close to a town, but in country districts it is different. There is a number of those labourers' cottages quite empty. It should be possible to introduce some new method of working them in connection with the farm on which the labourer resides. As a rule, when a labourer gets a new cottage the farmer tries to do without him. This creates a deadlock, and things go down instead of upwards, whereas if the labourer could be attached to the farmer and the labourer in the cottage would be sure of his work it would be better. Under the present system the farmer is uncertain of his man, and the labourer is uncertain of his work.

46649. Are there many farmers who give constant employment all the year round?—Yes, there are; and many would do so if they could get the men.

46650. Most Rev. Dr. O'Donnell.—Is there any special scheme for binding the labourer to work on the farm and binding the farmer to provide work for the labourer?—It is a scheme that has been in force for many years in this country. The labourer has been hired once a year, the same as in Scotland, and he is given a cottage and land and so much wages all the year round. It is either a six or twelve months' agreement, and there is no practical difficulty. Now, if a farmer has a cottage that is condemned as unfit for human use, instead of getting another cottage fit for use the labourer gets a cottage somewhere else, and the old cottage is left empty.

46651. Mr. Sutherland.—You say that some of these cottages now stand vacant?—Yes.

46652. I suppose the former occupants of them have emigrated?—Some have.

46653. Is that the principal cause?—I think it is that the labour has been as a rule year by year decreasing, as farmers have been giving up tillage.

46654. If the system you believe in advances and less land is under tillage, then of course there will be less demand for labour?—That is in the very rough places only.

46655. That may be the reason for having these vacant; the land going more out of tillage, and consequently there being no more work for these labourers to do—is that the case?—No. There are labourers' cottages vacant on some of the best places around us.

46656. The system you appear to favour would tend to eliminate the necessity for labour at all, would it not?—That is only in the very rough ground. I am not advocating that for all soils. I am saying that is the tendency of the present day; but if a better tillage came in, then the farmers would have a larger return from the land and more work would naturally follow, more dairy work, more work of every kind, if you can get double the crops off the soil.

46657. Why should you cultivate only the rough soil; is it not a misuse of labour to expend it upon the least productive land?—Decidedly.

46658. Would not it be a better use of labour to use it on the most productive land?—Decidedly, only on such; but there are large areas out here towards Schull and all that district with a great deal of rough soil.

46659. That appears to be cultivated?—Very little of it.

46660. There is a great deal of cultivation between here and Schull?—Yes. There are spots here and there, but it is not my idea to restrict the amount of tillage done at all, but I want that the people should know how to improve the poor parts of the land, and thus be able to give more employment. I think it is the tendency of the farmers all around here to till just as much as their families can do and no more; and then he may buy another farm and perhaps a third farm. There are farmers around here who have three farms. They live on the one and carry a few cattle to another, and there is one person to attend them, and no tillage on that farm. That system is growing all around for the last twenty years.

46661. Because it is the easiest?—Because it is the easiest, and because of the scarcity of labour. A farmer with 50 or 60 acres here has not got labour attached to his place that he is certain of. A labourer living around may come to him if he pleases.

46662. Which is the real cause; that it is easier or that he cannot get the labour?—Both of them. A great many farmers have had to give up this work because they cannot get the labour. It is very hard to get labouring men around here for constant work.

46663. Mr. Kavanagh.—You would make the cottage part and parcel of the farmer's holding?—Certainly.

46664. So that he would have some claim on the labourers?—Yes, and I think the farmer should pay the rates. The labourer is now paying for it. He could give the labourer the cottage as part of his wages, and then he could give him a separate acre of land every year instead of keeping him year after year to the same spot. My next point is that I took a great interest with regard to fruit growing and vegetable preserving. But fruit growing gives a very uncertain return, for the crop of fruit is very uncertain and it is very hard to protect it. Therefore it is not a very popular thing here, nor is it likely to be very popular; but, on the other hand, there is a very great opening for the employment of a great number of females in cottage industries with regard to vegetables, if there were more encouragement given and more instruction as regards growing vegetables. Our local Board applied one time for an Instructor with regard to fruit growing and vegetable preserving. The Congested Districts Board was not able to give us one. But it would be a great advantage if you could have an Instructor to instruct them, because you get a return from vegetables two or three times a year. I am not in favour of factories. The factory system, most clergymen will tell you, is not very suitable for the family. Youngsters of twelve to sixteen get as much wages very often as men. Homes are broken up and so on. But cottage industries have not this effect. As regards vegetable preserving, at the Exhibition of Cork they had men teaching all this work; but the instructor took an interest chiefly in large factory work. They had two assistants, large boilers, heaters, and so forth, and they did not exhibit any cottage work. I got samples of cottage work, and a pamphlet describing it. I made a little drying machine to experiment with, and I am able to have vegetables at my table, the nicest green peas possible, in January, February, and March, and also kidney beans and other vegetables. Those preserved vegetables have a good sale all the year round. But if a man comes into Skibbereen with a cart load of cauliflowers he will have sale for them for a few days; but there is no certain sale, no fixed market. Then he drops them. If he dried them, as the women could dry them, now that the creameries have taken away work from the homes, they would have plenty of employment, and profitable employment, whilst he would have a better price for his produce; but it requires to be shown before their eyes how the thing can be done or they won't

o it, and if we had these Instructors for this cottage ork I think they would be very successful indeed.

46665. Mr. SUTHERLAND.—With regard to fruit, ave you a local market for fruit?—We have a local arket here in the streets.

46666. Is any fruit sent to Cork?—No, I think not. don't think, with railway rates and one thing or nother, that it pays.

46667. Strawberries are not sent?—They are not ent in any quantities. They are distributed locally. don't know of any being sent up. I tried to start wo or three men with half-acres of gooseberries and o on. The difficulty was to get sale for them, the rice of carriage to Cork comes so heavy.

46668. And they are subject to deterioration also? —Yes. They want careful handling.

46669. What are the other kinds of fruit round ere?—Raspberries and strawberries. Of course, if hey were encouraged there is an immense crop of lackberries to be had for the collection. It is very asy to collect them. I would go in more for vege- ables than fruit; especially peas and beans.

46670. Are these difficult to preserve; is the opera- ion intricate?—No; very simple indeed.

46671. Is sugar the principal ingredient?—No; imply boil them for about five minutes; then put hem on a square frame with a grating at the bottom f it, just over a stove or range after the day's cook- ing is done until they are dry. I generally get the dairymaid to do it after the day's work is done.

46672. Do they require to be hermetically sealed? —No; they can be kept as easily as corn in the bags. The most simple country folk could easily do it. Any of the grocers all the year round will give a good price for it.

46673. Have you put yourself into communication with the Agricultural Department in Dublin about it?—No, I have not. I have only worked locally, with the Technical Instruction Board we have tried to get up here to some extent.

46674. Most Rev. Dr. O'DONNELL.—The district is specially suited for the growing of early vegetables and potatoes?—It is, but it is not so well suited for early potatoes up here, because we have frosts up to May. The early potatoes are better near the sea; at Clonakilty or Toe Head. At Castle Townshend Madame De Bunsen employed an Instructor, who got down sprouting boxes, and persuaded a lot of people to go in for early potatoes, and send them off to Glasgow; but several of these little lots sent to Glasgow did not pay carriage, and several of them have only just paid carriage. It was not done there on a large scale, as it is at Clonakilty.

46675. Will the through service to Cork help to market them?—Yes, very much. We would have a quicker market then for fruit from here right on if cost of carriage is lessened.

Dr. T. J. O'MEARA examined.

46676. Mr. KAVANAGH.—You have been nominated y the Bishop of Ross to give evidence?—Yes. My vidence before the Commission deals with the ietary, physical condition, housing, and sanitary urroundings of the houses of the poor, chiefly in the istrict extending along the coast from Toe Head to Roaring Water Bay, and including the islands of Sherkin, Cape Clear and Hare. The area of this istrict is about 20,900 statute acres. The popula- ion is 5,750, of whom about 1,260 live on the islands. The land along the coast is for the most part rocky and the soil of a light nature. The greater part of this area comes under the definition of a "congested district." The inhabitants are for the most part poor; the dietary is defective, the general health of the people not good; the houses of the poor, exclusive of those who occupy "labourers' cottages," bad, and the surroundings of the houses very unsanitary. The dietary consists chiefly of bread and tea, dried fish and potatoes. Tea has become a very general article of diet, is partaken of usually three times a day, and often by the women five and even six times daily. Milk and porridge are now scarcely used at all, and the poor say they cannot obtain milk, the supply of which is absorbed by the creameries. I think that eventually the creameries will interfere very much with the general health of the country.

46677. Mr. SUTHERLAND.—We have had this complaint before, but not on such high authority as that of the medical profession: you are decidedly of opinion that the creameries have got this tendency? —Yes. The farmers will actually not sell the milk to the poor, and even they won't use it themselves. They will use tea in preference to milk. They want to get as much money as possible out of the creameries to meet their expenses. With that object they send as much milk as they possibly can to the creameries.

46678. You think it is bound to have a deleterious effect on the health of the people?—Yes. My objection to creameries is altogether limited to that one thing.

46679. But it is a very important thing?—Yes; *Salus populi suprema lex.*

46680. You think it may ultimately affect the physique of the population?—I am afraid so. Even where the people are ill they have a difficulty in obtaining milk. In acute illnesses milk is indispensable.

46681. For infants no food is so valuable?—Not at all as valuable. Milk is the natural food of the young of every mammalian species.

46682. Mr. KAVANAGH.—What was the price of milk before the creameries came in?—I could not tell you that with certainty.

46683. I suppose they have sent up the price?—I don't think the creamery system has sent up the price.

46684. Why should not the farmer keep as much milk for his family as formerly?—He does not wish to reduce his sales to the creamery. I believe he would scarcely sell the milk locally, even at an increased price, even when he got a penny a pint. The creamery pays about fourpence-halfpenny per gallon for new milk, and he gets the separated milk back. This separated milk is not fit for use. The people won't use it. It has the taste of machinery.

46685. Most Rev. Dr. O'DONNELL.—The good is taken out of it?—Not all. It would be a really useful article of dietary if it was not objectionable. The only nutritious part taken out of it is the cream. You have the milk salts, the sugar of milk, and the albumen in the returned milk, which, if usable, would be a very good article of diet. It would correspond to the skim milk of former days.

46686. Mr. SUTHERLAND.—Is it all as good as the skim milk?—Not quite as good. There is more cream taken out of it. The former method of skimming the milk was simply by taking off the cream which rose to the top of the milk.

46687. Mr. KAVANAGH.—Would you say it is nearly as good as the old separated milk?—As far as chemical analysis goes it would be as good an article of diet, but it has certainly a very objectionable taste, which I suppose is due to the machinery, and people have given up using it.

46688. Most Rev. Dr. O'DONNELL.—It deteriorates rapidly?—Yes. There was some other objection too. In the beginning, after the establishment of creameries, typhoid fever broke out in connection with them before they were established on a proper sanitary basis. That was a deterrent to a certain extent In the Bandon district an epidemic of typhoid was caused some years ago by infected milk going into the creamery and being sent out in the separated condition and used by the farmers.

46689. The substitution of tea for new milk in feeding children is a serious matter?—Yes. There is no nourishment in tea, except the milk and sugar put into it. Tea is simply a stimulant. There is in the country an amount of tea drunkenness. Women drink tea five or six times a day as a stimulant. They make it in an objectionable manner. They stew the tea on the fire. A great deal of the tannin is got out of it, which is very deleterious to the stomach.

46690. Even if it were well made you would object to it, because it allays the natural appetite for food? —I would not object to anybody taking tea if they made it in a proper manner, and food of a proper kind was taken during the day. In consequence of this dietary anæmia and dyspepsia are common diseases among the female portion of the population. The health of the people is below the normal standard. The most prevalent diseases are anæmia and dyspepsia, caused by defective dietary; rheumatic

July 16, 1907.

Dr. T. J. O'Meara.

ailments, caused by the humidity of the climate and the dampness of the dwellings; typhus fever, which is endemic, but seems to be on the decrease. Typhus fever is essentially a disease which arises from filth and overcrowding, and has been very prevalent in this locality for generations.

46691. Mr. SUTHERLAND.—To what do you attribute the fact that typhus is endemic?—It has been in this country for generations. The germs have been in the country for a very long time. They have remained there owing to defective sanitary surroundings and to the ignorance of the people.

46692. They were not properly dealt with when the fever went down?—Yes. Even apart from that, I think typhus fever is a fever that will arise *de novo*. from insanitary conditions even without any pre-existing cases.

46693. Most Rev. Dr. O'DONNELL.—Are the islands the worst?—Hare Island is the worst. Toe Head is almost as bad. Typhus fever occurs in ill-ventilated overcrowded, insanitary houses, more especially of Toe Head, Aughadown, and Hare Island, though sporadic cases occur from time to time throughout the entire district. When I say sporadic cases I mean cases that arise without any previously existing case, but arise from the insanitary condition of the house itself. During the past twelve years there have been three outbreaks of this fever in Toe Head. two in Aughadown, and two in Hare Island. This last-mentioned place has been the seat of very serious outbreaks of typhus. In 1886 an outbreak of such severity occurred there that the schoolhouse had to be turned into a temporary hospital. That gives you no idea of the amount of typhus that has arisen in this district from time to time. It occurs all along the coast. After the last outbreak of typhus in Toe Head in 1903, Mr. Justice Ross—in whose court the Toe Head estate is—on requisition being made to him, gave directions that some twenty houses should be better ventilated at the expense of the estate, and windows which can be opened were then inserted into these houses. That is a great improvement. I am very loth to prosecute my patients, as every doctor must be. There were some twenty or thirty of these people prosecuted at my suggestion for the purpose of compelling them to improve the surroundings of their dwellings. That was before the outbreak in 1903. They were fined nominal sums, and paid the costs, and the year after the outbreak of typhus occurred. The suggestion was made at the prosecution that the court should be appealed to to improve the condition of the houses under its jurisdiction, and the Court of Chancery refused to do that. In fact I believe that the suggestion never reached Judge Ross himself, in the first instance. Nothing was done. Twelve months afterwards the epidemic occurred. There were eleven cases and two deaths. Then I brought forward this matter again, and sent a copy of the former suggestion to the Local Government Board. They evidently sent those suggestions to Judge Ross himself, and an order was made that this should be done.

46694. Mr. SUTHERLAND.—Who is liable in this case? Is it the landlord or the tenant?—The lawyers all say that this is a difficult question, as to who is liable to put these houses into a sanitary condition. The tenant is liable for the surroundings of the house, but the landlords claim the house as part of the land. They let it, but I believe they are not obliged in law to repair it.

46695. Mr. KAVANAGH.—In any case it is a bankrupt estate?—Not exactly bankrupt. It is in Chancery.

46696. Mr. SUTHERLAND.—The Court of Chancery are really the landlords?—Yes. In reality there are four or five landlords, but the estate is being administered by Judge Ross. Pulmonary tuberculosis is very prevalent, more especially in Aughadown, Hare Island, Sherkin Island, and Cape Clear. I have noticed that its incidence is greatest in those localities to which consumptive Irish-Americans have been and are returning, and when it is introduced into one of these houses, which from their structure cannot be properly disinfected, and in which isolation of infectious cases is impossible, we often find it continues in the house for years, one member after another becoming infected until frequently the family practically disappears. In Hare Island, into which the disease was first introduced from America about fifteen years ago, I have known four members of one family die of it in one house in three years; in the Baltimore locality five members of one family died of it in ten years. This last case is very sad. Only the old man is left now. He is about seventy-five years old. His four children and his wife have been taken away by this disease. In another case four members of one family died of tuberculosis during the winter of 1905-1906, in Aughadown. In this last case also the first patient was a returned Irish-American, who came home to die. I think that this is a very important question. We are all very anxious to reduce the amount of tuberculosis as far as possible, but I think the fact that our death rate from tuberculosis has practically remained constant for the last ten years is in no small degree due to the fact of those Irish-Americans returning to die. A question was asked in Parliament a fortnight ago as to the numbers of those who return. It is impossible at present to ascertain that with certainty. With regard to this matter I read a paper before the Royal Institute of Public Health at its meeting last year in Cork. At that meeting I made the suggestion that persons suffering from tuberculosis and returning to this country should have their cases notified from Queenstown or other port of landing to the medical officer of the district to which they intend to proceed. That suggestion has so far not been acted on, but I have reason to believe that in a short time legislation will be introduced.

46697. Have you any knowledge of the occupations at which these people were employed before they came back?—A good many were employed as housemaids. There is the glamour of the wages. They get pretty good wages in America, but they have to work extremely hard. Some of those girls tell me they have to work from four o'clock in the morning until seven or eight at night. The men work in factories. They leave the country district—we suffer greatly around here from emigration—in good health. They go into the towns, and work under unfavourable conditions, and they very soon fall victims to disease. It is a curious fact that in America as here the Celtic race seem to be subject to tuberculosis. They have noticed the same thing there. The incidence is greater among the Celtic race in America than among the other races.

46698. Mr. KAVANAGH.—Do you suggest it is a more infectious class of tuberculosis that is brought back by the returned emigrants?—I believe that. It is suggested, but not stated, but I have suggested it in other places. It is not only my opinion, but among the people themselves I have heard them say that such is the case. We are gradually finding that a lot of those old ideas that we used to regard as superstitions have a good foundation in fact.

46699. Most Rev. Dr. O'DONNELL.—What would they do on the American side if that class of persons went there?—It is very interesting with regard to that. Last year while I was away I met some gentlemen who had been travelling, and in one of the boats which called at New York they had a gentleman who suffered as a hunchback, which is very often a form of tubercular disease of the spine. Though this man was actually a first-class passenger they would not allow him to land in New York. I had a somewhat similar experience myself of a patient who came home here suffering from consumption, and improved while here. He had been four or five years in America, and he went out again, but they would not allow him to land in that country. The conditions on our side are very different from what they are in America. They are very stringent there, and I may say they are right. I think we require protection in that respect anyhow.

46700. Your observation has been that among returned Americans pulmonary consumption is more prevalent than any other disease?—Yes. Among those who return suffering from disease I may practically say it is the disease. Another disease that they suffer from is a form of neurosis. The young women go to America. After a time very often they suffer from nervous strain, and they frequently come back bordering on insanity. They are all nerves. They are not actually insane, but in a perpetually excited condition. The houses of the labourers, except those who occupy poor law cottages, the fishermen, and the small farmers, consist for the most part of low, thatched, ill-ventilated cabins, with earthen floors, which are consequently always damp in winter. They consist generally of two apartments,

a kitchen and a bedroom, and sometimes a "loft." There is frequently no means for proper segregation of the sexes. At the front and back of houses such as these there are as a rule cess pits or manure pits, which emit foul odours, and are, of course, injurious to health. In houses of this class and with such unsanitary surroundings we find typhus fever, pulmonary and other forms of tuberculosis, infantile diarrhœa, occasionally diphtheria, which is on the increase in this district, and oftentimes severe forms of influenza, pneumonia, and scarlatina. For several reasons the rectifying of these conditions is difficult. Being a dispensary medical officer, I am loth, as a Medical Officer of Health to prosecute my own patients, and indeed all other dispensary medical officers in Ireland are placed in a similar position—a fact which renders the sanitation of rural Ireland stagnant. In fact, the dispensary medical officer is a kind of governmental Pooh-bah. Originally he simply attended to the people when ill. Then the Pubic Health Act was passed forty years ago, and instead of appointing proper officers of Public Health at proper salaries, they simply got rid of the difficulty by tacking that duty on to the medical officer, and giving him a salary of from £10 to £20 a year as medical officer of health of a district varying from 50 to 100 square miles in extent.

46701. Mr. SUTHERLAND.—They have no separate medical superintendent?—No, except for large centres like Belfast, Dublin, Cork and Limerick.

46702. Of course an officer in that position would have no scruples in prosecuting?—Of course not. He is independent of everybody. It is all very well to say that a man should do his duty and prosecute those people, but I need not tell you it is expecting too much of human nature.

46703. Most Rev. Dr. O'DONNELL.—Besides it interferes with the confidential relations subsisting between you and your patients?—Exactly. I am always attending patients for serious diseases and get a lot of patients' secrets, and it is not a nice thing to have to go and give evidence against these men. But I may say this, that I have prosecuted my patients as much as anybody else.

46704. Mr. KAVANAGH.—Would not it be far harder in any case to enforce the sanitary laws in very poor districts?—Yes. In this connection County Medical Officers of Health should be appointed, who should devote all their time to sanitary work, go about among the people, instruct them as to what should be done, and with the co-operation of the local authorities, see that their recommendations are carried out. However, on account of the poverty of the inhabitants of these congested districts, I do not consider much progress can be made in sanitary matters by prosecutions, the costs of which press heavily on the poor who have not the means of putting into effect the recommendations of the sanitary officer.

46705. Mr. SUTHERLAND.—We are back at the old point: whose property it is. Surely it is no hardship for any person who has property and derives profit from it to put it into sanitary condition?—It is and it is not. I would agree with you that a man should keep his house in proper sanitary condition, but I don't think in present circumstances it is feasible. We are at present in Ireland at a time when the land is passing from the landlords to the people and it will be very difficult to get the landlord to expend money or build houses on those lands.

46706. That condition has not obtained always; it did not obtain at the time of the Medical Act?—It did not. I have tried to get that done, but I have got legal advice that it is not possible to make the landlord build a sanitary house on his property.

46707. You have no power such as we have in other places to deal with the property yourself and recover from him?—So I believe.

46708. Why should you not have this in Ireland?—We have different laws in Ireland from those in Scotland. I have spoken to a solicitor about this and asked him if it were possible, and was told it was very doubtful if a prosecution against a landlord would succeed in those cases.

46709. Mr. KAVANAGH.—We have heard of houses in other parts of the country without chimneys; these are also the property of the landlord?—We are practically in that condition here with regard to a lot of these houses.

46710. Mr. SUTHERLAND.—There is no disease in them?—In all the houses which were bad here in former times with smoke there were people who suffered from ophthalmia, but I understand they have not got that in the smoky houses in Scotland, though their lungs must be coal-black, and loaded with soot.

46711. The death-rate in these houses is the lowest in the kingdom; that is the test?—Persons may suffer seriously in their health and not die. A person may live to be ninety with ophthalmia. In these cases I would suggest that grants-in-aid be made through parish committees or otherwise, and more especially to the inhabitants of Toe Head and Hare Island and to the poorer people in Sherkin and Cape Clear Islands, for the improvement of the surroundings of their dwellings, the putting in of proper windows and the cementing of the floors. I think that is an important thing to have done. If we could get a grant through your favour we could get people to build houses. A great many of these people, if we could give them a grant to buy slates and timber, could, by local co-operation, build houses.

46712. Most Rev. Dr. O'DONNELL.—What would be the average valuation in these islands?—In Hare Island I should say it would be £4.

46713. I think it would be difficult to find an area where the claim for a parish committee with a respectable grant is stronger than the area you have described?—I am very glad to hear you express that opinion. In Toe Head and Hare Island and some other portions of the district the houses are built in villages, so that "bawns" of four or five houses adjoin. The bawns are simply the manure pits. It is quite the thing in those places along that coast. They continue to build their houses in villages. It is an interesting question, the origin of the building in villages, which they have traced on the Continent to the desire for protection against wild animals. From those villages modern towns have developed, it seems.

46714. Mr. SUTHERLAND.—Does the question of relationship enter into it?—In those villages not in the least. As a matter of fact there is a saying in this part of the country that they cannot agree because their bawns are too close. This adds materially to the other evils of congestion. In the Toe Head locality the population is 175; there are 37 houses; of these, 17 are unfit for habitation, and of the remaining 20, all, with perhaps one or two exceptions, are defective by reason of earthen floors or insufficient ventilation. In Hare Island, with a population of 300, there are 46 houses, of which 40 are unfit for habitation. In Cape Clear, with a population of 620, there are 120 houses, of which 25 are uninhabitable. In Sherkin Island, with a population of 300, there are 60 houses; there are only 6 or 8 of these houses unfit for habitation. On the whole, the people of Cape Clear and Sherkin Islands are not badly housed, though the floors are nearly all earthen.

46715. Most Rev. Dr. O'DONNELL.—They are different in that respect from the people of Hare Island and Toe Head?—Yes. The people of Sherkin and Cape Clear, the latter especially, are all engaged in the fishing industry. In Cape Clear Island they are not badly off at all. In fact, from the financial point of view I think they are a great deal better off than a good many of the farmers on the mainland. Finally, the return of consumptives from America should be notified from Queenstown, or other port of landing, to the medical officer of the district to which they may be proceeding. I am of opinion that the high death-rate from tuberculosis in Ireland, viz., 27 per 10,000 of the population, is caused (1) by a weakening of the health of the people generally, which debility arises from emigration and defective dietary; (2) by defective housing of the people and the defective sanitation of the country generally; (3) by the return of consumptive Americans, who increase the death-rate by their own deaths, and by infecting and causing the deaths of others.

46716. It would be a great matter if the people could be induced to return to the simple dietary of their fathers?—Yes; when the people lived on stirabout, milk, and potatoes they were far healthier than at present. The nature of the feeding has become more refined and expensive, but it is not as good as it was in former times.

Rev. JAMES O'SULLIVAN examined.

July 16, 1907.

Rev. James O'Sullivan.

46717. Mr. KAVANAGH.—Kindly state what points you wish to bring before the Commission?—I wish to refer to the congested district of Aughadown South. It is in my parish and comprises about half of the parish, which includes several islands. The population of this district would be about 1,400. On the mainland there would be about thirty or forty farms uneconomic, and on the islands they are all uneconomic.

46718. What are the islands?—Hare Island, Skeam Island, and Calf Island.

46719. Most Rev. Dr. O'DONNELL.—Is there any suggestion of any property in your parish being sold to the Congested Districts Board?—No, though we have made overtures to that effect to some of the landlords and the agents. In the entire district there are only two estates sold so far by private arrangement.

46720. Straight from the vendor to the tenants?—Yes.

46721. Would not you consider such districts as are in your parish, and as have been described by Dr. O'Meara, Hare Island district and Toe Head peninsula, should not be sold direct to the tenants, but should pass through an improving authority, such as the Congested Districts Board?—Yes. I think that would be the proper thing to do, if the interests of those people were to be improved. They require very much better houses and better sanitary surroundings. On the southern side of the mainland and on the islands fishing occupies a very important place, but agriculture also is important. A large proportion of the land is cultivated, and there are creameries in the locality. The cultivation is rather of an imperfect kind, and they require proper technical training. I consider the proper thing to do to develop agriculture in the district would be to have plots attached to the National schools where the teachers would give instruction to the children, even from their early age, theoretically as well as practically, and in addition to the local teacher that there would be itinerant teachers or inspectors coming round from year to year, experts to point out the best methods to add to the instruction given by the local teachers.

46722. Without specially trained teachers you could not do this work?—You could not do it well.

46723. They have not the training?—I don't think the present generation of teachers can do much in the matter; but they should be trained in the training colleges first, and when they come out I think they would be sufficiently competent to give a certain amount of instruction, theoretically and practically.

46724. Mr. KAVANAGH.—Have you noticed that the health of the children suffers from the presence of creameries?—I have no doubt in the world but that it does materially. The milk from the creameries is very defective as an article of dietary. As the doctor has observed, it has a very disagreeable taste; and it is very liable to corruption, and to become unfit for food very quickly, and there is very little nourishment in it. They give some of it to the children, and they use it also for feeding young cattle. They hold that cattle fed on creamery milk are inferior to other cattle.

46725. Most Rev. Dr. O'DONNELL.—Is there any tendency to send away out of the household more milk than the household can spare?—They send away nearly all the milk to the creameries. They, in some instances, retain very little to colour their tea.

46726. Is there enough retained for the children and the mother?—No, very rarely; as a rule there is not.

46727. Mr. KAVANAGH.—That is not really the fault of the creamery system; it is the fault of the people who send too much milk to the creameries and do not keep enough for themselves; don't you think if that was brought before them it would have a very good effect?—It is put before them very frequently. I frequently bring the matter under their notice, in very strong language sometimes. It makes very little impression on them. They send all they can to the creamery to get as much as possible in a lump sum. They don't like to lessen the amount they are likely to get. It holds out a great inducement to them. They forget altogether the health of the children in the matter.

46728. Most Rev. Dr. O'DONNELL.—Your parish is at Roaring Water Bay?—Yes, and round by Skibbereen River. It comes near Skibbereen.

46729. What would you chiefly suggest as the best thing to be done?—I distinguish between the mainland and the fishing districts. On the mainland instruction is necessary, and they may be helped in various ways. One thing would be to get good seeds for their land, good grass seeds. I am of opinion myself, as well as from what I have heard the tenants say in reference to seed, that it is very difficult to get really good seed that will grow, and grow strongly, because the seed is sometimes very defective. I think it would be well if some plan would be adopted to secure good seeds for the tenants.

46730. A change of seed?—Seed that would be guaranteed as sound, and would be sure to germinate and grow strongly. With regard to the fishing population on our islands principally, and along the coast, they are greatly in need of piers for the development of the fishing in my parish.

46731. What is Hare Island causeway intended for?—As a passage from Hare Island East to Hare Island West. It is very inconvenient for people to go to and come from market and do their business, having to wait for low tide when it would be dry, and the children going to or coming from school were often in danger of being drowned. At high tide there is a depth of about six feet on the strand. The water rushes in very rapidly.

46732. Has the work been begun?—Not yet. It was originally expected that in connection with the bridge there would be a quay or slip built for the use of the boats of the locality. We have a large number of boats on the island, large mackerel boats, and we have a large number of lobster boats. Lobster fishing is the principal fishing on Hare Island. It would be a very successful fishing if we had a good permanent market for the lobsters. It was only last Sunday I met some of the people and they told me they had lobsters caught in their pots, and some of them were dying. When the weather gets warm they die very quickly when confined in pots. They were afraid they would lose a lot of them for want of a buyer. For many years past, except last year, there was only one buyer came there from England to buy the lobsters. He had a monopoly and cut down the price to six shilling a dozen and five shillings a dozen, and it went as low as 4*s*. 6*d*. a dozen, a price that would hardly pay them for their labour; and men coming with lobster steamers from England could, I am given to understand, safely give twelve shillings a dozen, and have a splendid profit. A Frenchman came last year, and he raised the price to fourteen and fifteen shillings in some instances, but we are doubtful if he will come in the future. If he does not come in the future, then, of course, the monopoly returns.

46733. Mr. KAVANAGH.—I suppose he found it did not pay?—He is supposed to come every year, but he got into some difficulties in Baltimore. Mrs. Ross charged him more than he had anticipated and she brought an action against him. He got very indignant over it and stated he would never again come. However, it would be well that the fishermen would have a market, and that it would not be in the hands of one individual. Adopt some means to market the lobsters and I am confident that the fishing would be very successful. We want a little quay built there in connection with the bridge. It would be a great convenience. There are two villages near where the bridge is built, and there are a lot of lobster boats, and the people want a quay very badly. In rough weather they have to pull up their boats on the dry land.

46734. Most Rev. Dr. O'DONNELL.—You say it should be built in connection with the new construction?—Yes. It could be built for very little.

46735. Mr. KAVANAGH.—You are in a congested district?—Yes, it is a scheduled district. With reference to accommodation on the island, in 1892 there was a road made through the island for the first time. I succeeded in getting it passed. Father Davis was in Baltimore at the time. Lord Zetland, who was Lord Lieutenant, came down on the island to see it. Through him I succeeded in getting the road made and a slip at the east end of the island, as well as a

large quay at Roaring Water Bay; but the slip on the east is not at all sufficient for our wants there. We should have a quay there, with a slip at the end of it allowed to run out, and it is very easy to make a little land-locked harbour where the mackerel and lobster boats particularly can be safely protected during winter from the storms. The mackerel boats would come alongside, and it would be very useful to them frequently. There are a number of hands on the island. If there is a surplus of fish there, they tell me, when there is a glut of fish and a very little price for it in Baltimore they would come over there, and employ the females in saving the fish even for their own use. But as it is they have to anchor away right off the land. They have no quay there. We want a quay on the mainland, and opposite this quay at the end of a road leading to Hare Island there is no place to land except the rough rocks. These schemes were outlined in 1892. All the engineers that came that way, as well as the County Surveyor and the Deputy Surveyor, were in favour of having these quays built, with other improvements. There is a road from the east to the west of the island, but it was intended also to make two small bits of road, one running north and the other south, leading to little villages on the island, which would be a great advantage to the people and very necessary. I have no doubt in my mind if Father Davis had lived a little longer, or anyone representing that part of the country were on the Congested Districts Board, those schemes which were outlined at the time and approved of would have been long since completed.

46736. You would like a representative on the Board for the County Cork?—Yes, I think it would be well. Aughadown South is a very large congested district with a lot of islands, and it is very congested. In Hare Island the valuation per head is about twelve shillings, and we have never up to this, to my knowledge, got a penny from the Congested Districts Board, except for this bridge we have got lately, and for which the poor people of the island are very grateful. With regard to purchase on the mainland as well as on the islands, we have purchased two estates in that district. They made overtures to the landlords and agents of the other estates, and there are many of them there, small landlords and small middlemen, and we could not come to terms with them They required too high a price, and we consider that in order to effect anything like a reasonable bargain between the landlord and the tenant in those cases the only way to secure that would be to give the Congested Districts Board compulsory powers to purchase the land. I would suggest that particularly with regard to Hare Island, because if it was in the hands of the Congested Districts Board the Congested Districts Board would be in a position to see that the houses would be improved and the people made more sanitary in their surroundings, and also that the boundaries of the farms should be defined. The boundaries are very irregular and mixed up very much; and these irregular boundaries, which have existed from time immemorial, are the cause of frequent squabbles among the people, whereas if the boundaries are defined and each holding was altogether by itself it would obviate any difficulty in the matter.

46737. Most Rev. Dr. O'Donnell.—A representative from Cork on the Congested Districts Board would know such properties as the one to which you have referred, and he would know also the need for meeting the special wants of the fishermen, and he would be aware of the conditions of the people both on the coast and inland to a degree that would not be possible for one living at a distance?—Certainly. He would know all the circumstances of the case better.

The Commission adjourned.

APPENDIX I.

APPENDIX I.

DOCUMENTS put in by Mr. M. O'CONNELL in connection with the Evidence given by him before the Commission.

A.—NOTES OF EVIDENCE.

CONGESTED DISTRICTS.

There are ten electoral divisions congested; population, 10,784, roughly a third of the population and area of the union of Listowel. The Rural Council think that the remaining two-thirds should be scheduled, seeing that the average population per head is only £1 19*s.* 3*d.*, and of the congested divisions, £1 3*s.* 2*d.* The 30*s.*, or under, per head rule should be abolished, and the Board should have a discretion to schedule a townland or a group of townlands as it should see fit.

The present method is no guide. For instance, Kilshenane, one of the scheduled divisions, has only a valuation of 16*s.* 3*d.* per head. The cause of its low valuation, of £486, is because the land, reclaimed bog largely, was of little value in 1852, when the valuation was made. A holding of only five or six pounds valuation may have from ten to fifteen cows in Kilshenane. Lisloughtin, Tarmons, Liselton, Urlee, and other places are more "congested." The instance of this division is given to show that the rule at present in force should be abolished.

UNTENANTED LANDS.

As to what lands are most conveniently situated for the relief of congestion, I submit a schedule of the untenanted lands in the district, which was sent to the Commission in October last.* Also the replies received from some of the owners of these tracts.† Since then the townlands of Baunacaulig, Coolagown, and Ennismore have been sold to the Estates Commissioners, and the holding at Gurtcreen has been sold to a tenant. The most considerable area of the best land in that schedule is in Kilehenny, 846 acres of very good tillage land, and the letter from Messrs. Reeves and Sons, solicitors to the Scottish Provident Institution, states that they were in communication with the Congested Districts Board as to sale. It will be observed that in this schedule demesne lands are excluded.

COTTIERS—MILK SUPPLY.

With a view to improving the condition of small occupiers, rather than increasing their number, it may be well to consider whether, in the case of congested localities situated near tracts of untenanted lands it would be practicable, in the case of buying any of those tracts, to vest a *portion* of such land in the Congested Districts Board permanently with a view of enabling that Board to let such lands for the grazing of a cow by each cottier whose present holding is too small to feed a cow. I am informed, and believe that, while in the towns milk can be got, in the rural districts, for six months of the year, very little milk is to be had by the labouring class. The nurses tell me condensed milk is used to feed children, and even during the summer months it appears to be the practice, generally, that in the absence of a continuous and certain demand for milk, such as contractors provide for, farmers cannot see their way to sell any of their milk by retail, as the greater portion of the milk is engaged to be taken to the creameries and the remainder is used for feeding calves. Many hold the view that the appearance of the children at the rural schools shows, as a rule, they are not well nourished. Suppose, then, the land is obtained near congested places, the question will then arise, in the case of these people, how are they to purchase a cow, and if they get a loan to buy a milch cow where there is no cow already, or to replace an old tuberculous cow, what security can they offer for the repayment of the money.

Bearing upon this point, I submit a report‡ made by me on the 7th May to the Guardians, from which it will be observed that, out of a seed loan of close on £2,000, in the rural district, there was actually collected out of the first instalment £986, over 99 per cent., leaving only an arrear of £13 uncollected, and in not one case out of over 1,800 recipients of seed potatoes was any attempt made to repudiate the debt. It is to be borne in mind that a large number of these poor people were too poor to offer any sort of security; they were trusted; they proved themselves worthy of trust, and I think it may be submitted that they would also repay a loan to buy a cow.

It is suggested, respecting the supply of milk to the poor throughout the year, in the localities not situated near untenanted tracts, if it could be arranged to have contracts with the local farmers, made by the Parish Committees and the Board's local agent, to see to a weekly collection, it is possible that there is no economic or other difficulty about the matter, as it would be worth any farmer's while to enter into these contracts for a continuous supply, and a portion of the money paid for dear tea, which is largely consumed, would, in this way, be diverted for a supply of milk, which is so badly needed for the children of the poor, who, perhaps, have often to drink the milk of tuberculous cows—hence the high consumptive death-rate amongst the poor. In maternity cases, the supply of pure milk is of first importance.

Proper organisation and a business arrangement would seem to be the only thing necessary to carry out this reform.

LABOURERS' COTTAGES.

There are 444 cottages provided in the Listowel Rural District—310 completed and occupied and 134 building, or near completion. There are 516 applied for at the Inquiry now going on; and, allowing, say, for 350 to be passed, that will be 800 cottages provided, but as the rate limit, a shilling in the £, will be reached when the 800 cottages have been built, some other sources must be sought to improve the condition of the remaining unsanitary houses.

The attached paper shows the ascertained result of the working of the Act to 31st March last.§

SANITATION.

Respecting the strict enforcement of the Public Health Act, seeing that a sub-sanitary officer, on whom the practical work falls of enforcing the Public Health Act, is paid at the rate of £10 a year, it cannot be expected that he will be very enthusiastic about the performance of his duties. Parish Committees should be formed to assist the Sanitary Authority in such work as removal of manure from near houses, lime-washing, inspection of dairies, etc.

At the present the work is not as effective as it should be. Hundreds of notices are served to remove manure from near dwellings, but the manure, if removed, is shortly afterwards allowed again to accumulate.

A local committee, including the clergy, with an instructress who should have some such qualification as the diploma of the Royal Sanitary Institute of London, to enable her to deal with such matters as ventilation, &c., should have the proper authority to deal with such matters. The County Instructress should visit the houses of the poor—at present those who attend the classes in towns are educated ladies, many of whom are qualified to be instructresses themselves. To improve the general sanitary condition, I hold the view you must commence with the schools, but the sanitary condition of the schools is "a menace to the public health"—reports received in April and May, 1907, from medical officers of health—and the Chief Secretary says the condition of the premises is "infamous"; yet nothing is done. An improvement was recently suggested by the Rural Council of Listowel to the Resident Commissioner of Education

* See p. 206. † See p. 207. ‡ See Table E, p. 208. § See Table F, p. 208.

with a view to the use of earth closets (paper enclosed), but as the Commissioner's reply merely threw the responsibility on the managers, this seems to be evading the question, as the managers have no funds for this purpose.

Trees for Shelter

The Rural Council suggest that forest trees, in lots of four or five hundred, should be given through the Congested Districts Board, in congested areas, free to occupiers under £10 valuation, and at half-price, or 1*s.* 9*d.* per 100, to occupiers under £20 valuation, to plant shelter belts.

Fruit Trees.

An occupier having this year—March last—planted an acre (Irish measure) with 304 apple trees, twelve feet apart either way, with small fruit trees in between, I am able to state, if it is of any interest, what the precise cost was. For fencing a sod fence 6 feet high at north and west sides, and paling at south, and east, thorn quicked, with furze on top, cost of trees at 9*d.* each, three years old, approved sorts, pitting, planting, everything, £17 9*s.* 2*d.* Though the soil is a very heavy, retentive clayey, light surface, about eight inches, and quite unsuitable for tillage, the trees all grew well, and in sheltered places some ten to twelve are yielding *this year* as many as ten to eighteen apples each. The land will be meadowed as if it were not planted, and in five or six years' time it is expected the whole money will be made in fruit.

This instance tends to prove that, if sheltered from north-west, apple tress flourish in poor, cold land, which is not suitable for tillage; but, to encourage planting, trees should be provided for small occupiers at a much cheaper rate than 9*d.* each.

B.—NOTES OF A SPECIAL MEETING HELD BY THE LISTOWEL RURAL DISTRICT COUNCIL IN REFERENCE TO LARGE HOLDINGS.

The Listowel Rural District Council, in Special Meeting assembled this 3rd day of November, 1906, respectfully request the Right Honourable the Earl of Listowel, Lord Ormathwaite, and the Gentlemen named in the Return accompanying this Resolution to be so good as to let us know, at their convenience, whether they will be pleased to enter into negotiations with the Estates Commissioners, or, in the scheduled areas, with the Congested Districts Board, for the sale of the lands at present in their occupation, to be divided amongst competent persons who have no land and who are willing and able to till it and pay rent for it.

Lest our action in this matter may be misunderstood, we desire to say that by the Labourers Act, 1906, we are enabled to purchase portions of an estate for the use of agricultural labourers.

We submit the following for consideration:—

(1.) All parties in the country agree, as shown by the public Press, of every shade of opinion, here and in England also, that the question of Emigration has already become a serious economic question; and, as time passes, will become more serious still, if some real effort is not made to stop it.

(2.) One method, in conjunction with local or cottage industries, is the division of large holdings amongst those willing and able to cultivate land, which recent evidence before the Commission has shown to result in material improvement in Connaught.

(3.) On the question of whether small holdings are economic:—Taking the most progressive counties in Ireland—Armagh, Down and Londonderry—the proportion of large holdings in these counties of from 200 to 500 acres is—Armagh, less than half per cent.; Down, two per cent.; and Londonderry, three per cent.

(4.) In the County of Kerry the number is fourteen per cent.

(5.) Taking holdings of from five to thirty acres—where the workers and the producers are raised—Armagh has eight and a half per cent.; Down, over ten per cent.; Londonderry, six and a half per cent., and Antrim, eight per cent. of such small holdings.

(6.) Again compare with Kerry, which has only four per cent. in number of five to thirty-acre farms.

(7.) In the north-east of Ireland the rule is—tillage and no grazing of store cattle. The fertile south is a wilderness of grazing, and no tillage to speak of—even right up to the towns' undrained, unmanured, and "sour" land—deteriorating. Listowel Union is three times the size of Downpatrick Union, and the figures (Report, 2,722, page 124), taking one crop only, are—Potatoes, 12,809 acres in Downpatrick; 4,851 acres in Listowel. The proportion here is, allowing for total area of tillable land, acre for acre, nine times more tillage in the North.

(8.) Based on precise, ascertained facts, this tends to confirm the view that holdings of from five to thirty acres of average land, at a fair rent, can be made economic; and that being so, and the owners being willing to sell, the division of these large tracts of land amongst the workers—the sons of labourers and the sons of small farmers who have no land and whose only prospect of betterment is emigration—is only a matter of price.

(9.) Should business now result, our strong suggestion to the Commissioners or Board will be:—In selecting tenants, to take only working men who are sober and can prove thrift by an account, if only £2 or £3, in the Savings Bank, and in order to discourage laziness to put a smart rent of £2 to £3 an acre, on all grass or meadow, more than the holdings requires, and to charge 5*s.* an acre only for tillage, the local agent to be the sole judge of this.

(10.) Let it be understood that the proposal now made by this Council to the proprietors is a business one—will sale and division pay better than grazing? It is also quite a friendly one, and if there is any objection, of their own free-will, to sell, or to enter into negotiations as to the sale, the matter is at an end, so far as this Council is concerned. However, whether for or against the proposal, we invite an expression of opinion, as such can do no harm, and may possibly result in good business for all parties concerned.

(11.) We recall, with pleasure, that it was to this Council the Right Honourable the Earl of Listowel first made known his intention to sell his estate, and we should be very glad now also to learn, through his Lordship, that he would be prepared to sell his lands at Ennismore, etc., and thereby give a good lead to the other proprietors who are similarly situated.

(12.) Finally, this Council desires to acknowledge publicly that they have been met in a business-like and liberal spirit by the owners of land in Listowel Rural District, without exception, respecting the purchase of 180 plots this year, under the Labourers Acts, and whether they are now disposed to discuss terms with us or not these friendly relations, as far as we are concerned, continue unabated.

We are, my lords and gentlemen,

Your obedient servants,

Signed on behalf of the Rural Council in Meeting assembled,

T. O'CONNELL, *Chairman.*

J. BOLAND, *Vice-Chairman.*

T. KEANE, *Chairman of Poor Law Board.*

Countersigned, M. O'CONNELL, *Clerk.*

3rd November, 1906.

D.—CORRESPONDENCE.

Non-Residential Holdings.

The following correspondence has passed in reply to Resolution of 3rd inst., herewith:—

Royal Commission on Congestion in Ireland.
Westminster Palace Hotel, London, W.,
14*th November*, 1906.

Sir,

I beg to acknowledge receipt of your letter of the 10th and enclosures, which will be duly submitted to the Commission. The Commissioners will probably not sit in the County Kerry until about next May, and the arrangements for the Sittings there will not be made for some months.

I am, Sir,

Your obedient Servant,

Walter Callan, *Secretary.*

The Clerk,
Listowel Rural District Council.

From The Right Honourable The Earl of Listowel and J. D. Crosbie, Esq., D.L.
(912 acres and 308 acres respectively, arable.)

While Lord Listowel and I are both sympathetic with the very laudable efforts of your Board to stay the exhaustive drain of Emigration, we are compelled, by the unconscionable delays of the Estates Commissioners in completing sales, to decline to embark upon any further negotiations for sale until those pending have been disposed of.

I am, your faithfully,

James D. Crosbie.

M. O'Connell, Esq.

From M. V. Blacker-Douglas, Esq., D.L.
(Bog, 314 acres; arable, 218 acres.)

Dear Sir,

In reply to yours of the 3rd, I offered all my land in Kerry, in my own occupation, to the Estates Commissioners last January, and I understand they are sending a Valuer now to report on the property.

Faithfully yours,

M. V. Blacker-Douglas.

The Clerk,
Listowel R.D.C.

From Sir W. J. Paul, Bart., Waterford.
(Bog, 116 acres.)

Dear Sir,

Re unoccupied lands near Listowel, I should be willing to sell the turf banks in my own occupation, but I have to bear in mind that it is expensive to sell a portion of an estate, and also that uncut turf banks, near the town of Listowel, must, sooner or later, be of considerable value. At one time when my father cut turf on his own hands, it produced £30 a year net profit.

Faithfully yours,

W. J. Paul.

Clerk of the Council, Listowel.

From G. F. Trench, Esq., J.P.

Dear Sir,

In reply to your circular I have nothing to do with any property in your list except that of Mr. Blacker-Douglas.

As regards the first item, the holding in Carrueragh has been already applotted to the tenants, on their purchase; and as regards the second item, at Tullihinell, I am already in communication with the Estates Commisioners regarding the applotment of it amongst occupiers in the neighbourhood.

Faithfully yours,

G. F. Trench.

M. O'Connell, Esq.

Richard Latchford, Esq., J.P., Tralee,

Notifies that he is prepared to sell his farm at Clieveragh, 35 acres, to the Congested Districts Board.

From the Scottish Provident Institution, Edinburgh.
(846 acres, tillage land.)

Sir,

The Scottish Provident Institution have handed us your letter of the 3rd, together with the schedule referred to in same, and in reply thereto we beg to inform you that we are now in communication with the Congested Districts Board relative to the lands on hands referred to in circular.

Faithfully yours,

S. S. & E. Reeves & Sons.

M. O'Connell, Esq.

From J. Sandes, Esq., B.L.

1, Raglan-road, Dublin,
17*th November*, 1906.

Dear Sir,

In reply to your favour of the 15th inst., I beg to state that I am at present in communication with the Estates Commissioners *re* my untenanted land.

Yours faithfully,

John Sandes.

M. O'Connell, Esq.

E.—PARTICULARS AS TO THE COLLECTION OF SEED RATE.

I submit to you the result of the collection of Seed Rate, first instalment. Closed on 31st March last.

Collector.	Instalment.	Arrears.	Per cent. collected.
	£ s. d.	£ s. d.	
O'Sullivan, ...	137 1 3	0 16 3	99⅛
O'Connell, ...	130 17 10	0 10 10	99½
Galvin, ...	148 16 2	0 5 5	99⅞
Flynn, ...	141 15 0	3 0 4	98
Keane, ...	177 5 9	1 1 8	99½
Walsh, ...	163 17 10	6 18 6	95⅞
Mulvihill, ...	87 3 0	1 7 1	98½
Total, ...	986 15 10	13 10 1	—

Upon the whole the amount actually collected and lodged is £98 11*s.*, out of every £100 worth of seed sold, and arrears £1 9*s.*, excluding one collector whose arrears is made up almost entirely of two peculiar cases, which still remain to be investigated, and about one of which I am far from being satisfied, the amount collected by six collectors is fully 99¼ per cent.

Decrees have been got for nearly all these small arrears. For instance, Mr. Flynn holds five decrees for £3 0*s.* 4*d.* which ought to be good to the extent of £2 16*s.*

Having regard to the rush at the distribution; to the want of patience by the great bulk of the recipients; to the fact that the railway company three times disappointed us in the way of delivery; and to the anxiety of the guardians to distribute the large supply, 444 tons, to two thousand applicants, in the shortest space of time, I venture to express the opinion

APPENDIX I.

that a collection of 99½ per cent. by six collectors is not bad.

Another thing of importance is proved conclusively by this collection—taking them generally, the recipients were very poor people—in many cases, the poorest of the poor, and it stands on record that these poor people in Listowel Union have met their liabilities in a manner, I think, that reflects credit upon them, and I shall take the occasion of bringing this fact to the notice of the Royal Commission on Congestion, which meets at Listowel on the 3rd July next.

This collection amply proves that these people may be trusted to meet their liabilities to the Congested Districts Board for small loans to enable them to improve their condition.

May 7th, 1907.

F.—PARTICULARS AS TO THE WORKING OF THE LABOURERS (I.) ACTS IN THE LISTOWEL RURAL DISTRICT.

1. No. of Cottages and Allotments provided 309
2. Rents reserved in the Lettings ... £722 13 6
3. No. of Cottages or Allotments unoccupied 1
4. (*a*) No. of Cottages or Allotments the Rent whereof is in arrear ... 142
   (*b*) The total amount of such arrears £85 4 0
5. (*a*) No. of Cottages applied for under last completed Scheme ... 226
   (*b*) No. of extra Half Acres applied for under last completed Scheme 70
   (*c*) No. of Cottages sanctioned under last completed Scheme ... 137
   (*d*) No. of extra Half Acres applied for under last completed Scheme 46
   (*e*) The total amount of expenses incurred in connection with the preparation and confirmation of the last completed Scheme ... £728 4 6
   [Total Loan, £21,210; 135 Cottages, 42 Half Acres, 8 Acres]. (Date of Order—5th December, 1905).
   Particulars of such expenses:—
   Official (Board of Works, L. G. Board) £228 8 6
   Legal—Inquiries, Privy Council, Appeals, &c. £157 0 0
   Engineering £160 0 0
   Clerical £108 0 0
   Incidental—Printing, Advertising, &c. £74 16 0
6. No. of cases where advances have been made to Agricultural Labourers under Section 2 of the Irish Land Act, 1903, and Section 19 of the Labourers' Act, 1906 ... ... Nil
7. (*a*) Amount of Loans sanctioned for 446 Cottages and 10 Village Plots £65,999 0 0
   (*b*) Amount of Loans received for 446 Cottages and 10 Village Plots £56,789 0 0
   Amount of Loans due for 446 Cottages and 10 Village Plots £9,210 0 0
   (*c*) Amount required to be raised annually in repayment of Loans £2,108 0 0
   (Valuation, £56,800; outstanding, £43,626).
   (*d*) Poundage Rate necessary to raise amount specified at 7 (*c*) - 8¾*d.*
   (*e*) Poundage Rate actually levied under the Acts ... ... 4⅞*d.*

It is to be observed that under the Incorporated Acts—Landlord and Tenant Act—the rent shall be 40 days in arrear before a Summons to recover can be issued.

8. (*a*) Amount of Rents paid by Tenants of Cottages or Allotments during year ended 31st March, 1907 ... ... £728 9 7
   (*b*) Outlay during year ended 31st March, 1907, for:—
   Repairs £87 14 3
   Insurance ... ...
   Rent Collection £91 1 2
   Legal Proceedings against Tenants' Evictions ... £12 12 8
9. No. of Cottages with Half-acre Plots or less than Half-acre Plots 28
   No. of Cottages with more than Half and up to Three-quarters of an Acre ... ...
   No. of Cottages with more than Three-quarters of an Acre ... 281
10. (*a*) No. of Plots Let to Persons not Tenants to the Council of Dwelling-houses ... ...
   (*b*) Total Acreage of such Plots ...
   (*c*) No. of Tracts of Land Let in Allotments to Labourers living in neighbouring Villages or Towns 8
   (*d*) Total Acreage of such Tracts 4 acres
11. Details of any new Improvement Scheme proposed to be carried out:—

No. of Cottages, &c., to be provided.	Where Garden Allotment does not exceed half a statute acre.	Where Garden Allotment exceeds half an acre.	Estimated Cost.	Date of Scheme.

APPENDIX III.

MAP SHOWING THE POSITION OF AGRICULTURAL AND CO-OPERATIVE SOCIETIES IN 1901.

MAP put in by MR. GEORGE F. TRENCH, in connection with TABLE B, on opposite page.

N.B.—The figures shown on the above map refer to a list of societies which is given in the Report of the Irish Agricultural Organisation Society for 1902. Since then several of these societies have been dissolved, and very many others have sprung up.

APPENDIX III.

DOCUMENTS put in by Mr. GEORGE TRENCH, in connection with the evidence given by him before the Commission.

A.—STATEMENT OF SALES OF TENANTS' INTEREST ON TWO TYPICAL ESTATES IN THE COUNTY KERRY.

(*a.*) M. V. BLACKER-DOUGLAS'S ESTATE.

(1.) Maurice de Courcey sold his interest in 1895 to Thomas O'Connor, a returned Australian, for £850. Area, 84 acres with a mountain.
Rent, £50—17 years' purchase of the rent. Poor Law Valuation, £43 15*s.*
O'Connor sold his interest in 1898 for £600 to J. Hanlon, present tenant; 12 years' purchase.

(2.) Thomas Foran, Kilgarvin, sold his interest in 1896 to Thomas Corrydon for £145. Area, 21a 1r. 3p.
Judicial rent, £9—16 years' purchase of the rent. Poor Law Valuation, £7 10*s.*

(3.) Thomas Relihan, Carrueragh, sold his interest in 1899 to Sarah Stack for £290. Area, 40a. 0r. 20p.
Rent, £17 2*s.*—17 years' purchase of the rent. Poor Law Valuation, £13 10*s.*

(4.) R. G. Gentleman, Farranawanna, sold his interest in 1900 to Pat Finucane for £500. Area, 212a. 2r. 6p.
Rent, £141 13*s.* 8*d.*—3½ years' purchase of the rent. Poor Law Valuation, £106 10*s.*

(*b.*) LINDSEY TALBOT-CROSBIE'S ESTATE.

(1.) John Wood, Ballysheen, sold his interest in 1892 to Daniel Pierce. First term rent, £233. Area, 282a. 3r. 6p. Poor Law Valuation, £176.
Price, £850—3⅔ years' purchase of the rent.

(2.) David Watson, Ballysheen, sold his interest in 1894 to Joseph Lovatt. First term rent, £167. Area, 247a. 2r. 7p. Poor Law Valuation, £108 5*s.*
Price, £550—3¼ years' purchase of the rent.

(3.) John Leslie, Cloonametagh, sold his interest in 1897 to Thomas Harty. First term rent, £24. Area, 30a. 0r. 15p. Poor Law Valuation, £14 15*s.*
Price, £300—12½ years' purchase of the rent.

(4.) John Talbot, Laccamore, sold his interest to John Hannifan. First term rent, £8 5*s.* Area, 19a. 1r. 2p. Poor Law Valuation, £8.
Price, £180—21¾ years' purchase of the rent.

APPENDIX IV.

APPENDIX IV PAMPHLET put in by THE MCGILLYCUDDY OF THE REEKS, in connection with the evidence given by him before the Commission.

"IRELAND'S OPPORTUNITY."

TO ALL ENGLISH-SPEAKING PEOPLE.

AN APPEAL.

The old restraints on Irish industry have been removed, and the spirit that invoked them has passed away. Ireland is free to develop her own resources. A superb opportunity awaits her. But her need is industry, and those vital forces of industry—capital and trained direction. Labour she has in plenty. It is the purpose of this pamphlet to proclaim an opportunity that opens the way to the industrial regeneration of Ireland. and to appeal to English-speaking people throughout the world for the aid by which the opportunity may be grasped and the great work begun. No differences of race, religion, or politics can interpose. The cause is humanity; the task, the uplifting of a nation by the arts of peace.

Ireland's way to prosperity lies through the development of her fisheries. It is proposed to develop this natural wealth by co-operative labour. The various industries that will be thus revived, or created, will help Ireland where she most needs help—in the Congested Districts. The co-operative principle will enable her to reap and retain the full benefits of her labour; an inspiriting example will be set before the entire nation; Ireland will enter upon a new era and a new life.

The plan presented in these pages is an ambitious one, but it is practical. Its originator is a man of experience, courage, and untiring energy, and he is an Irishman, bearing an old and honoured Irish title—The MacGillycuddy of the Reeks.

Ireland's loftiest mountains rise above the matchless waters of Killarney and perpetuate the name of a tribal line once dominant in Kerry. The tribal legends still linger about MacGillycuddy's Reeks; what was best in the old customs of chiefship survives there, and the head of the Sept still dwells among his people.

Among his latest unaided efforts in developing the resources of his district has been a notable revival of industry among the salmon-fishers of the Laune, the Maine, and the Caragh rivers, and Castlemaine Bay. The MacGillycuddy, by securing markets and transportation for the catch, enabled these men to increase their earnings one hundred per cent. in a single season. And this was done against a fall in prices.

Encouraged by his success, the MacGillycuddy conceived the idea of establishing a Co-operative Association among the Irish fishermen. For eighteen months he made a careful study of the history of the Irish fisheries, of their present condition, and of the best means for developing them. The result is the plan presented in his appended address to the men.

In behalf of the great American journal which it is my privilege to represent, I accompanied the MacGillycuddy on an extended tour through the Irish fishing districts. The experiences of this journey were described in the *Boston Herald*. It is impossible to repeat within the limits of this pamphlet the story of our investigations, but I have done so in a little volume entitled "Self-Help for Ireland," which is already in the Press, and which will be published for the benefit of the proposed Association.

The world knows that the Irish waters are rich with fish, but it does not realise the extraordinary abundance of this wealth. Nor do Irishmen themselves appreciate the incalculable resources of their seas and streams. The Irish sea-fisheries to-day give uncertain and ill-paid employment to 22,000 men, of whom not more than 7,000 devote their entire attention to the work. The rest are small farmers, who, in endeavouring to follow two widely different occupations, make a success of neither. There are in Ireland only 395 fishing boats of the "first class," *i.e.*, rating above 15 tons. The remainder are indifferent row-boats and frail curraghs.

The Irishman's boats are primitive, and his gear is defective. In all Ireland there are but four net-making machines, and these are used by the boys in Father Davis' Fishery School at Baltimore. Fish-curing is almost a lost art; markets are for the most part, inaccessible; breakwaters, piers, and landing-slips are needed at almost every station. Through ignorance and inferior equipment, the Irishman is unable to compete with the foreigners who fish along his own coasts. Though he is quick to learn, and is willing to work, he is too poor to buy the necessary plant, and to provide for himself the requisite instruction. Capital has never interested itself in his behalf. He has been left to struggle as he could.

Fully one-half of the Irish catch is wasted, because there are no adequate facilities for transporting fresh fish, and because the men are ignorant of the arts of curing and salting. The Fishery Inspectors are hindered in their work by lack of funds, and even accurate statistics are not available. There are no figures extant showing the volume of the Irish catch. Even the sales are imperfectly recorded. The Blue Book for 1890 contains returns of the sales at 95 stations only. It appears that the men received £380,000 for the year. But these figures give no indication whatever of the *actual catch* at these 95 stations. This must have been at least twice as great as the quantity sold. My own investigations have convinced me that three-fourths of the Irish fish are wasted. But it is sufficient for present purposes to estimate the waste at one-half the catch.

The demand for fish as food is steadily increasing in all great centres of population. With proper facilities for reaching the markets the Irishmen can sell all the fish they catch. They could have sold £760,000 worth of fish in 1890—that is to say, the entire catch of the 95 stations which are fortunate enough to be mentioned in the Blue Book.

English, Scotch, Manx, and Frenchmen fish off the Irish coasts. It is fair to assume that, with their superior training and equipment, their fish-take is at least equal to that of the Irish crews. Add to the known hauls the returns for Irish salmon exported to eight large English towns in 1890, according to the Inspector's report, and we have the following figures which faintly indicate the immense wealth of the Irish waters, wealth which Ireland can easily make her own:—

Actual Irish *catch*, at least	...	£760,000
Catch of foreign crews in Irish waters	...	760,000
Irish salmon export, 1890	...	353,000
		£1,873,000

This is a very moderate estimate. But I am convinced that the first year's work of the proposed Co-operative Association would return to the Irish fishermen two million pounds. If the long-line fishing, which can be carried on throughout the year, were properly developed these figures would be greatly increased. The possibilities of growth are unlimited. In "Self-Help for Ireland" I have discussed them fully. I have also cited many instances of waste which came under my observation. I will mention but two here.

On one occasion I saw 100,000 mackerel brought to the strand by twelve row-boats working six seines. On another occasion I saw a single seine haul 16,000

mackerel. In both cases the boats hauled within a thousand yards of the shore, and about half a dozen miles inside the headlands of one of Ireland's finest bays. In both cases the fish were wasted. There were no buyers, and the men had no curing-sheds and no salt. Such woful instances are common at the Irish fishing stations, but they find no place in the official estimates of the Irish *catch*. At the time of which I speak, mackerel were selling in the London fish-shops for sixpence each.

From her own waters Ireland can draw great wealth. But she must first be able to provide a better fleet, and she must hire, or purchase, small steam vessels for carrying her fish to market. Should anyone deny Ireland's ability or inclination to grasp this opportunity with the means which it is hoped will be granted her, let him go to the Cape Clear region in County Cork and see what has been accomplished there by the aid of one of England's noblest women. Twelve years ago the Baroness Burdett-Coutts found at Cape Clear a destitute people. She loaned them capital, and to-day the entire region is as thrifty and prosperous as any fishing district in the world, and the "Capers" are said to be the most daring fishermen in the British Isles. What Father Davis has done at Baltimore (perhaps the most remarkable effort in Ireland during the nineteenth century) by establishing there the first Industrial Fishery School in the world, is another proof, if proof were needed, of what Irish brawn can do when it is guided by a wise brain.

From the public point of view the proposed Association deserves support, and at its inception substantial help. It is highly probable that the Association's steamers will be able to influence a considerable reduction in the railway rates on all classes of goods carried in the North, West and South-West of Ireland; the general work of the Association will remove a heavy burden from the rates and taxes; the congested districts will be permanently relieved; Co-operative Labour will restore the fallen fortunes of a country whose natural resources have been scarcely touched; Ireland will be awakened by industry, and her people will ensure for themselves a prosperous life in their native land.

It is intended that the Association shall be ready for active work at the opening of the spring fishing season in 1892. But this cannot be done unless public subscriptions help to supply the equipment necessary to begin the work. Once under way the Association can undoubtedly secure funds from the Congested Districts Board, from the Grand Juries, or County Councils, and from Government Loans and Grants. Meanwhile this appeal is made to the generous public. I have elsewhere shown how the Association can quickly become self-supporting.

An account has been opened in the name of "The Kerry, Cork, and West of Ireland Fishermen's Association," at the National Bank, Limited, Killorglin, Kerry; and subscriptions may be sent to E. H. Hannigan, Esq., the Manager of the Bank.

A committee of ladies and gentlemen is being formed to assist in collecting and forwarding subscriptions.

The subscription list will be published from time to time.

Here, then, is Ireland's opportunity. The natural wealth awaits development; the labour awaits employment; the trained hands, and the directing heads have been selected; and they, too, await the starting signal—the liberal subscriptions of all who believe that industry exalts a nation.

ARTHUR WARREN.

FISHERMEN OF KERRY, CORK, AND THE WEST OF IRELAND.

Your earnest attention is called to a plan which is of vital importance to every man among you, because it is intended to make you prosperous by increasing your earnings and your opportunities, by developing your fisheries, by providing new and profitable employment—together with technical education—for your children, by protecting your rights, and by securing to you the full fruits of your labour.

Fishermen's Association.

You may have already heard that, in August and September, I addressed meetings of fishermen along the coasts of Kerry and Cork, having in view the foundation of a co-operative organisation to be called "The Kerry, Cork, and West of Ireland Fishermen's Association." In order that the nature of this Association may be fully understood by those who were unable to attend the meetings, and by all whose co-operation it is desirable to enlist, this pamphlet has been issued.

What has been done.

The meetings referred to were held at Smerwick, Ballyferriter, Brandon, Dingle, Caherciveen, Valentia, Portmagee, Ballinskelligs, Waterville, Derrynane, Eyries, Ballydonegan, Allihies, Garinish, Castlegregory, the Cashen River, Limerick, and other important fishing stations, and they had the warm approval and support of the priests of those places—the Rev. Fathers O'Leary, Scannell, O'Sullivan, Murphy, O'Reilly, Foran, Martin, Larkin, Barton, O'Connel, M'Carthy, Trant, and Molyneux, who took the chair at the respective gatherings.

The next steps.

On each occasion, and without a dissentient voice, it was resolved to accept the plan herein set forth, and it was further agreed to call, later on, one or more general meetings of all the lake, river, and sea fishermen, and Fishery owners of Kerry, Cork, and the West Coast, for the purpose of founding the Association, which, it is hoped, will begin operations on St. Patrick's Day next, for the opening of the Spring season of 1892.

Invitation to Fishermen.

The General Meetings will be held at the most central and convenient places possible, and due notice will be given by advertisement and posters. All the riparian proprietors, and all the fishermen, from the fresh-water anglers to the crews of the sea-trawlers, are cordially invited to attend these meetings, either in person or by their appointed deputies. The railway companies will be asked to provide special trains and fares. It is important that there should be large and representative gatherings.

Co-operation.

The "Kerry, Cork, and West of Ireland Fishermen's Association" will be a purely co-operative industrial body. It is estimated that on the salt and fresh waters from Kinsale, in Cork, to Achill Island, in Mayo, there are about 14,000 fishermen and 3,600 boats. Every one of these men should join the Association.

Self-help for Ireland.

The movement thus inaugurated is destined to become one of the greatest and most beneficial movements ever known in Ireland, for as an industrial organisation on a strictly co-operative basis, governing itself from within its own membership, and providing ample work for the very poorest of both sexes, it should expand into a larger and similar body comprising all the fishermen in Ireland and all persons needing employment along the Irish coasts, especially in the congested districts, thus furnishing a splendid example of self-help which must in time be adopted by all other workers in the country, and raise the people in thrift, intelligence, skill and prosperity.

As you are, and—as you can be.

Fishermen! You should remember that "Union is strength." This old saying embodies a truth which is as applicable to you as it is to other men. To-day, working individually, or in small groups, you are poor; but united, you can change your poverty into prosperity. To-day you lack the appliances and the knowledge requisite for catching and curing fish according to the best standards, and you are unable to compete with the fishermen of other countries; but united and directed you can have the best boats and the best gear; you can have the best curing establishments that money and industry can procure; you can have harbours, piers, break-waters, slips,

icehouses, and hulks, and lobster tanks, and all things needful to your calling; you can have training for yourselves, and training-schools for your children. To-day your catch of fish is limited by the small capacity of your inshore craft and appliances, but united and trained you can have deep sea boats, and you can thus follow the fish to sea and open new fishing grounds, and increase your catch in volume and variety. To-day your means for getting fish to market are uncertain, intermittent, and very costly; you have no check on the market sales, no guarantee that you will receive full value for your catch; but united you can provide continuous transport throughout the year, and on the lowest terms, and you can command the best prices in the best markets, and secure for yourselves many intermediate profits which are now made by others. To-day the greater portion of your catch is wasted, spoiled and unsold, and often, when your waters are filled with fish, it is useless for you to go out even with your small boats; but by co-operative union you can dispose with profit of all the fish of every sort that you can take by means of a training and equipment equal in every respect to those of the most prosperous and skilful fishermen of other countries.

Wealth of the Irish Seas.

You have the best fishing waters in the world. Your seas, rivers, and lakes are filled with incalculable wealth which can be greatly increased. For centuries the fishermen of other nations have envied you the possession of these sources of wealth. To-day foreign fishermen arrive in ever-increasing numbers and enrich themselves along your coasts. The time has come for you to develop this wealth for yourselves. This you can do by industrial co-operative union under trained direction.

Advantages of Industrial Union.

This is the age of industrial union. Irish industry must be organized and directed or the country will for ever lose its opportunity, and be drained of the best part of its population, whose emigrated labour, by competing elsewhere with your own at home, increases the odds against you in the battle of life. It has been said that "Whoever should make two blades of grass, or two ears of corn to grow upon a spot of ground where but one grew before, would deserve well of mankind, and render essential service to his country." Co-operative union will enable you to catch two fish—yes, and twenty—where one was caught before, to earn two pounds where you earned one before, and to benefit your families, your communities, and your country by the establishment of a variety of allied trades now unknown in Ireland. "God helps them that help themselves."

The "Kerry, Cork, and West of Ireland Fishermen's Association" will be formed for co-operative, industrial, provident, and economic purposes; it will benefit all classes of fishermen and fishery owners, and it will be open to all of them. Its opportunities for profit and general helpfulness are so manifold that only an outline of them can be given here.

Stop Emigration.

The Association will do much to prevent the need for emigration which is fast draining Ireland of its best blood and brawn, as it will provide technical instruction and good employment for Irish boys and girls. It will also provide for the employment of all the able-bodied men at present in the fishing districts. It will take able-bodied persons of both sexes from the workhouses and so reduce the number of those institutions by enabling an amalgamation of Unions to take place, thereby rendering the vacated buildings available as co-operative centres—as Dairy, Agricultural, Forestry, and Fishery Schools, &c.—and relieving the present excessive burdens on the Poor Rates and County Cess.

Work for all at Home.

The necessity—hereafter described—of supplying the Association with timber, will encourage the reafforestation of the land, not only on the part of the Government, but also on the part of the peasant proprietors themselves. The Association will encourage and assist all organisations and individuals endeavouring to promote any form of Irish industry in the co-operative plan.

A wide scope for industrial development in Ireland is presented in the following statement of the

OBJECTS OF THE ASSOCIATION.

How to Increase your Earnings.

The first object is to develop the Irish Fisheries, and to retain for the profits of the fishermen every penny their fish make in the English, foreign, and home markets, beyond the cost of carriage and the commissions of salesmasters.

In view of the great bulk and variety of fish which the Association will be able to send to market in fast steam-carrying vessels (which will probably take return cargoes of goods or corn), the cost of carriage can be reduced to the lowest possible figure, the fish will be delivered regularly, without delay, and in the very best condition, and it is likely that the salemasters will find it to their advantage to make better terms.

Steam Carriers.

The Association will have (it may hire at first, until its own vessels can be built) a sufficient number of steam carriers, each capable of conveying from 200 to 500 tons of fish, and fitted with the latest improvements in engine power, as well as with wells or tanks for conveying lobsters and other live fish, and with cold air or refrigerating machines. These vessels will also be supplied with fishing gear, and they will be employed in fishing when they are not carrying.

New Markets.

These steamers will make a daily collection of the fish caught along the coast, and they will steam alongside the different markets, as the North Sea boats now do at Billingsgate. Direct, cheap and speedy communication will thus be established with the great food markets of London, Liverpool, Manchester, Glasgow, &c., and with important railway termini such as Dublin, Cork, Belfast, Milford-Haven, Southampton, Rotterdam, Ostend, Havre, Bordeaux, and Lisbon, whence the fish can be despatched by train to large inland towns. The bruising and jarring of frequent transshipment will be avoided, the fish will be delivered in prime condition, and new markets will be opened.

The steamers of the Association will bring to Ireland return cargoes of goods and general supplies, and they can even do this from foreign ports—from Holland, France, Germany, Spain, and America—at certain seasons of the year when the catch decreases, or the export of cured fish increases.

Collecting the Fish.

The Association will have a number of steam launches (or electric launches in districts where there is abundant water-power to generate the motive current, and where coal is scarce), also fitted with tanks, to collect the fish in the different bays, after it has been taken by the fishermen, and convey it to points just off the headlands, and there transfer it immediately to the steam-carriers, in order to avoid delay and to enable the latter vessels to proceed without waiting, and without deviating from their course.

Railway Rates.

The Association will secure special railway rates for fish to inland towns throughout the United Kingdom, and for catches that may be too small to send by sea. What are called "coarse fish," for which there is already a demand in Irish towns (where it is now sold at exorbitant charges), could also be sent fresh through the country in this way, a home market created, and the food supply of Ireland increased.

Parcels Post.

It is also proposed to establish a Direct Supply System by Parcels Post to all parts of Great Britain and Ireland.

Ice.

The Association can build its own ice-houses. This can be done at small expense. At Killorglin, in Kerry, old limekilns have been successfully converted into ice-houses, containing ice sufficient for a year's

atch in that district. At Killorglin the women and children collect the ice from the ponds; and even when the ice was not more than an eighth of an inch thick, they have gathered three hundred tons in a day at an expense not greater than five shillings per ton. In other parts of Ireland ice has been collected at two shillings and sixpence a ton.

The same method of collecting ice can be adopted in other districts. The work will relieve the neediest portion of the population, at the hardest time of the year. Norwegian ice can hardly be bought here for less than twelve shillings per ton.

Ice-hulks can be obtained for stations where they will be suitable. They can be filled from the ice-houses belonging to the Association, or by ice which may be manufactured by machinery at certain stations, or which can be purchased elsewhere.

Storage.

Some ice-houses will contain chambers for storing fish during a glutted market, or for occasions when a catch is too heavy to be sent by one steamer, or when the weather is too stormy for the carriers to put to sea, and railway transport is not available. These cold-storage chambers will also be useful for preserving bait for long-line fishing.

Bait.

At present this bait is usually unprocurable when it is most wanted, and the long-line fishing, which can easily be carried on throughout the year, is stopped.

General Work.

The Association will have lobster and eel tanks in Ireland and England; it will have oyster and scallop beds along the Irish coast; it will have salmon hatcheries; it will rent small rivers now barren and stock them from the hatcheries; it will protect spawning fish and fry; it will have curing and smoking sheds, sheds for tinning fresh fish, as the Scotch and Americans have; sheds for making nets, boxes, barrels, lobster-pots, and gear generally; it will have sail-making sheds; and it will ultimately have its own timber yards and saw-mills, and its boat-building and repairing yards.

Harbour Boards.

The Association will establish Harbour Boards, as is done elsewhere. It will appoint a qualified engineer for consultation on important matters, for improving existing works, and for the construction of any new works required.

Value of Fish-Refuse.

The Association will supply fish-refuse as manure for the land. Huge amounts of this refuse are now wasted. Immense areas of worn-out land can be made valuable by its application. The dog-fish, which are so numerous and so destructive in many quarters, can be caught by special appliances, and their flesh utilized for this purpose. The skins and oil of dogfish are also valuable. The long-line fishing will then be relieved of its greatest pest.

Training Irish Labour.

The Association will provide able teachers to instruct Irish labour in the use of suitable machinery for making and repairing all nets, gear, sails, and clothes that the fishermen use, and all the boxes, barrels, smoking-apparatus, lobster-pots, direct supply bags, &c., incidental to the fishing industry. By trained direction it will enable the Irish fishermen to cure and smoke fish as well as the Scotch and Norwegians, and by sending out a high and even quality it can obtain a Government Brand which will enable shipments of Irish-cured fish to enter all ports without question or examination. This privilege has long been enjoyed by the Scotch shippers.

Deep-sea Boats.

The Association will enable its members to purchase first-class deep-sea boats and fishing gear, and it will provide skippers and hands to teach the new crews.

The Association will establish Industrial Fishery Schools on the model of the institution so worthily founded and successfully conducted by the Rev. Charles Davis at Baltimore. In these schools orphans and workhouse and reformatory children can be placed. Childhood will thus be disconnected from undesirable surroundings, and the burden on the community will be lightened. There will also be similar technical schools to which respctable boys can be sent by their parents. All the schools will be largely self-supporting, and while quickly relieving the rates and taxes, they will furnish Ireland with trained crews and mechanics for her future fishing fleet, and her varied industries.

Insurance.

The Association will establish a system of Insurance for lives, accidents, disablement, adulthood and old age. It will also provide for the insurance of the members' boats. Such systems are in operation in the English and Scotch fishing districts, and, in fact, in most large industrial communities, and their advantages are so obvious that they need no further explanation here.

Thrift and Recreation.

The Association will establish a Savings Bank, and it will promote temperance and thrift. It will encourage cottage industry, and it will open coffee, and reading and recreation rooms at the various stations.

Fishery Interests should be represented in Parliament.

The Association, while being in no sense political, will endeavour, *for the welfare of the fishermen*, to secure the adequate and continuous representation of the *fishery interests* in Parliament. It is necessary to inform successive Governments with regard to these interests; it is necessary to guide legislation with regard to them; it is necessary to secure Government assistance in great measure, as it is freely accorded in other countries. There are unnecessary limitations to be removed, and some necessary restrictions to be imposed—in the latter case such as relate to the regulation of over-fished areas, close seasons, and the saleable size of fish. The choking of rivers in the open season, and the pollution of streams must be prevented. The Government should be asked for larger and less restricted loans for boats, and for grants for harbours, piers, and landing-places, for buoys, and guiding-marks, for clearing channels for building railways and light-houses, for aiding technical schools, and for a scientific system of fish culture. Efforts should also be made to secure the extension of the Labourers' Cottages Acts to the housing of fishermen. Maps should be made of the sea, river and lake fishing-grounds, and charts for the spawning beds should be provided. Care should also be taken to secure to the fishery interests a proper share of the funds provided by the Congested Districts Bill.

A Peace-maker.

The Association will settle all disputes between fishermen; and it will closely watch and guard the fishery interests.

Security and Audit.

All persons through whose hands the funds of the Association shall pass in the management of its business, and who may have the care of its property, shall give reasonable security for the trustworthy performance of their duties; all accounts of the Association will be regularly examined by independent auditors; and all securities periodically inspected. The banking accounts will be kept in the name of the Association.

Development of Irish Industry.

It will be seen from the foregoing that the Association will cause a widespread revival, and an increasing development, of various Irish industries. For this reason its efforts should be aided and encouraged not only by the fishermen themselves, but by the Government, and by all who wish well by Ireland and her people.

FUNDS.

Assessment of Members.

1st. To provide funds for the work of the Association it will be necessary, in the first instance, to call upon the members, *i.e.*, the fishermen and fishery

APPENDIX IV.

owners themselves, for a subscription which may not be less than £1 per man, and which will doubtless increase in proportion to the size of the boat represented, and to the benefit to be derived. It is not likely that the whole subscription will be called up at one time.

Government Aid.

2nd. The Association, representing so many thousands of men, should be able to secure funds from the Congested Districts Board, and from the Grand Juries, or County Councils, and from Government loans and grants; it can also raise loans on reasonable terms on the general security of these sources, and on that of its combined membership and plant.

Help from Philanthropists.

3rd. Substantial financial help has already been foreshadowed by wealthy and influential people who merely wait to know that the Association has been formed, and that the fishermen are really determined to help themselves, and to prove the sincerity of their desire by subscribing their dues to the Co-operative Association, and thus pledging their best endeavours to secure its success.

Public Subscriptions.

4th. Appeals for funds for working capital will also be made to the public in England and America, and to philathropists who have always shown their willingness to help men who will help themselves.

The Association when once established will be able quickly to extend its fleet and its work.

Existing Assets.

5th. Fishermen already possess in their own labour, experience, and present outfit, fully forty per cent. of the capital necessary to begin the work.

ORGANISATION AND MANAGEMENT.

Membership.

None but fishermen and fishery owners will be admitted to membership, except by presentation of the Freedom of the Association, on the vote of the Central Council. The Association will not spread until it has grown strong enough to conquer all the fishermen's difficulties, when it will extend its membership and benefits inland to embrace the farmers, townsmen, and all others in Ireland as quickly as can be done with safety from overloading, or trying to do too much.

One Vote.

Each member will have one vote, and one vote only.

Local Councils.

There will be a Local Council at each fishing station. This Council will be elected solely by the members of the Association residing at the station, or within the district comprised by it. The number of members on each Local Council will be in proportion to the number of members of the Association residing at the station—say one representative on the Local Council for every twenty members in the district.

The Local Councils will acquire and record all information concerning the work and requirements of their respective stations, and will administer the local affairs of the Association under the direction of the Central Council.

The Central Council will be elected by the Local Council from among the members of the latter, each Local Council sending one or more representatives in proportion to numbers.

Central Council.—Its Duties.

The Central Council will receive, consider, and take whatever action is necessary upon the reports of the Local Councils; and it will issue working directions to the latter, and provide for the execution of the instructions. It will also obtain all available information relating to Fisheries, home and foreign; it will publish and circulate such information derived from these sources as may be of importance to the Association; it will establish a Reference Library of Fishery Publications; it will have charge of the training schools, the curing establishments, and all the property of the Association; it will regulate all matters relating to sales and transport, and, in fact, all the working of the Association, of which it will be the governing body.

Trustees.

The Central Council will conduct experiments relating to fish culture and the curing and carriage of fish; it will frame Parliamentary Bills when necessary; and it will endeavour to secure the election of efficient and faithful Boards of Conservators; it will accept and administer all aid given by the well wishing. The members of the Central Council will act as Trustees for the property of the Association.

President's Veto.

A President and a Vice-President will be elected by the Central Council, and will be co-trustees with the members thereof. The President will have the power of vetoing any measure passed by the Central Council if he considers it opposed to the best interests of the Association, and matters so vetoed will be referred to the general vote of the Association for decision.

His Duties.

The signature of the President will be necessary to ratify all proceedings of the Central Council, which proceedings thus ratified, will for all purposes of this Association, become fishermen's law. The President will, with sufficient assistance, manage and direct the business and the affairs of the Association.

Safeguard.

As a general safeguard, the Central Council, with its President, and the Local Councils, sitting together in General Assembly, shall have the power of suspending for a period, or of expelling after one warning, any member of the Association who is found, after proper investigation and hearing, to have abused his membership privileges, or to have willingly acted against the interests of the Association. For such General Assembly one member from each Local Council will be sufficient to represent his Council. The Central Council will appoint standing committees from among its members, and a committee of each Local Council, to provide for the different branches of the Association's work, and one-third of each committee will retire each year.

Terms of Office.

The same privilege of retirement in rotation will be observed in the membership of the Central and Local Councils, thus ensuring continuous practice in administration. The retiring members will be eligible for re-election.

The members of the Central Council will serve for two years, and the members of the Local Councils for one year.

The President of the Association, who will also be its General Manager, will hold office for three years. The Vice-President will hold office for eighteen months and will then be eligible for re-election for a second term of eighteen months. This will ensure a reserve of several men qualified by practice to fill the Presidency.

The President will have the power to order a general election for the Central Council, but only in the event of some now unforeseen danger which may threaten the existence of the Association as a free co-operative body.

Rules.

Articles of Association, and Rules and By-laws, will be prepared, and every member of the Association will subscribe to them when joining.

Aiding Members.

The Association will act as guarantor for those of its members who, being approved by the Councils, desire to use the Fishery Loans, or to raise other funds, for procuring boats and gear. Thus, industry will be encouraged.

A list will be kept (with prices) of all boats for sale in the British Isles.

A proportion of the offices of the Association will be filled by the most competent graduates of its training schools.

Sketch of Working Plan.

The Association will be founded, and its affairs conducted, on a purely co-operative basis. The accounts of every member, and of every boat, will be kept separate and distinct at the respective stations, and a full return for the fish accurately and promptly rendered.

To describe the method in brief: each boat will have a numbered locker on the strand, or slip, at its fishing station; and in its own receptacle the boat's fish will be placed. The Local Manager, who will be responsible to the Local Council, will have a duplicate key for each receptacle and will render a daily account of the fish to the owner, or owners, of the boats; he, and his assistants, will pack the fish and deliver it to the collecting-launch for transfer to the steam-carrying vessel which will take the catch direct to market, where the fish will be sold. Accuracy of count will thus be ensured, and the full market value of the fish will then be returned to the men who caught it, the only deduction being for the cost of carriage, the salesmasters' commission, and a small percentage for current working expenses. There will be a similar plan for the lake and river fishermen. Thus great loss of time to boats landing fish will be saved; which they can employ to continue fishing, instead of waiting idle till unloaded.

Cost of Carriage.

The charge for carriage in the Association's vessels will be much less than by any existing carriers, and less than any other vessels can carry for. The earnings of the carriers will go to the treasury of the Association, and thus pay for these vessels, assist the Reserve, Depreciation, and Insurance Funds respectively, and help to augment the revenue for the general work.

Salesmasters' Commissions.

The Salesmasters' commissions will be of no greater percentage than now. In view of the immense bulk of fish, the probability is that the rate of commission will be lessened. This will undoubtedly be the case if the Association can deal through agents of its own election.

A number of fishing boats will be gradually bought by the Association as a body, and the earnings of all these boats will be entirely devoted to the work and profit of the Association, in the benefits of which all the members will share. They can be manned by crews graduating out of the Fishery Schools, who can, later, buy them with their savings and the Association's help.

Division of Profts.

There will be a yearly or half-yearly division among the members of the profits derived from the steam-carriers and fishing-boats, and from the other property and work of the Association. Should there be any loss it will fall lightly among so many members. But it is almost certain that no loss can ensue.

Efforts will be made to secure from the Government a Post and Telegraph office at each fishing station.

The Association will have its own flag.

Future Fishing Fleets.

Time is, of course, necessary for the growth of the Association, and for the full development of its work. But there is every reason to believe that well within ten years everything herein anticipated will have been accomplished, and that Ireland will have 20,000 good fishing boats of all classes, instead of 5,000 (mostly inferior) boats as now; and that she will have 100,000 trained fishermen instead of 22,000 unskilled men, as now.

PRELIMINARY MEETINGS.

First Steps.

The first steps in organizing the "Kerry, Cork, and West of Ireland Fishermen's Association" are to be taken at the General Meetings, which will be called at an early date, and to which all the fishermen and fishery owners from Kinsale, in Cork, to Achill Island in Mayo, are invited. The men at the stations named on page 211 have promised to attend, or to send their representatives. Once under way, the organization will be extended to other districts, and will ultimately embrace all the fishermen of Ireland. When this has been done we shall have "The Irish Fishermen's Association."

At these preliminary General Meetings, committees will be appointed to approve the preliminary rules and by-laws which will be submitted, and to arrange for the election of a Local Council at each station.

Send your Best Men.

Do not fail to send the most intelligent and trustworthy men among you, to help in establishing the Co-operative Association, which must inevitably be productive of great benefit to you and to the country.

With Lists of Boats and Crew.

Be sure that you, or your representatives, at the General Meetings, bring correct lists of all the boats and fishermen at your respective stations.

Meanwhile, I will gladly furnish further information to any one who will communicate with me, and I will welcome any helpful suggestions.

McGILLICUDDY,

The Reeks, Beaufort,

Kerry.

November 1st, 1891.

APPENDIX. V.

APPENDIX V.

DOCUMENTS put in by Mr. W. J. DELAP, in connection with the Evidence given by him before the Commission.

APPENDIX VI.

DOCUMENTS put in by Mr. ROBERT M'CLURE, in connection with the Evidence given by him before the Commission.

A.—LANDLORD'S IMPROVEMENTS.

EXTRACT from the *Kerry Evening Post* of 31*st October*, 1883.

KERRY LAND COMMISSION.

KILLARNEY, SATURDAY.

Mr. Commissioner MacCarthy attended here in the Courthouse to-day, with Mr. Oliver J. Bourke, B.L., Registrar, and delivered the following judgments in the land cases heard recently in Kenmare:—

Estate of RICHARD J. MAHONY, of Dromore.

This estate is of a class which is, unfortunately, rare in Irish agricultural life. Too frequently it has been our duty to deal with estates in which the tenants seem to have been viewed merely as machines for the production of rent—in which rents were increased on almost every occasion of death, of marriage, of change of occupancy, and of change of proprietory—and in which no respect seemed to have been paid to the rights of tenants to improvements effected by them—rights which, though formerly doubtful in law, were never doubtful in morals. In such cases the judicial remedy, though sharp, was simple. The rent was reduced to what, on careful field-to-field inspection, appeared to be a fair rent—the tenant's improvements being exempted from rent in the manner and to the extent provided by the statutes—and the protection of the law being given to their future position. In another class of cases (generally arising on estates of great absentee proprietors), the rents were found to be, on the whole, moderate; but the estate was neglected, its management almost limited to the collection of rent, and nothing of importance for the improvement of the land done by either landlords or tenants. In such cases the problem was still simpler. The rents needed little revision; and the main operation of the statute was to give the tenant that security of tenure and protection for improvements which, when based on a fair rent, ought to induce him to rise from the lethargy of the past, and achieve the results of intelligent industry in the future. But on Mr. Richard Mahony's estate we have a condition of things quite different from both the classes of cases which I have mentioned. Here the landlord is a resident gentleman of high intelligence, and of generous devotion to his proprietorial duties. For what is ordinarily counted a generation he has applied himself to the improvement of his estate. He has opened it up by a great series of roads; he has connected it by many bridges; he has made many miles of drains and fences; he has built farm-houses and farm-offices; he has reclaimed hundreds of acres; he has stimulated his tenants' improvements, and respected whatever rights were thus created; he has helped his tenants in their troubles with his advice, his capital, and his command of banking facilities; he has established model farms and model dairies, introduced better breeds of cattle, and by his own admirable example, showed his tenants how to improve their stock, their dairies, and their culture. His rents rarely exceed the reduced rents which were fixed at the time of the Famine. To deal with an estate thus managed, as we would deal with the estate of a greedy rack-renter or a neglectful absentee, would be a flagrant violation of justice. For personal acts of kindness to his tenantry Mr. Mahony can have, like other men, only the reward of a good conscience and the gratitude which such acts ought to insure. But it is our duty to see that he shall have a fair pecuniary return for every pound of his expenditure in the improvement of the holdings submitted to our adjudication. So far as such improvements has been proved by evidence, and as on inspection, it has appeared to be suitable to the holding and to increase its letting value, this we have done to the best of our ability, and certainly with scrupulous care. If the result of our inquiries and of my colleagues' inspection showed that the rents ought to be increased, we would unhesitatingly have increased them. As it is, we leave them in most cases unaltered. In some cases a small reduction seems to be necessary. A few cases have been adjourned for survey or for inspection. A considerable number appeared to have been settled out of court. I venture to express a hope that the operation of the statutes, instead of disturbing, will cement the friendly relations which have hitherto existed between the landlord and his tenants. Mr. Mahony need not regret that his tenants have received by law the security of tenure which he has always practically accorded to them. It is not hard to admit *de jure* what he has long recognised *de facto*. His tenants should punctually pay rents which an impartial tribunal declares to be fair. They ought to prove by their patient, intelligent, and energetic industry that they are worthy of the opportunities now secured to them by the law, and of those other advantages afforded to them by the kindness and good example of their landlord, which no law could secure to them.

C.—A FEW HINTS for Dairy Farmers in South Dunkerron.

1. It is most important to have clean dairies; no manure or filth of any kind should be allowed near a dairy.

The walls should be roughly plastered, and the ceilings lined with a few half-inch deal boards.

The floors should be concrete; and if a farmer is too poor to provide a concrete floor, the next best thing is to make a floor of lime mortar, and coat it with well-boiled tar laid on while hot, and on this, while fresh, sprinkle powdered lime or fine sea sand, such as is used for land. Thatched roofs are as good as any.

2. Keep only good milkers, and feed them well in summer and winter, so as to obtain the greatest produce possible. Food can be grown on the land itself.

Rye, rape, cabbage, vetches, clover, and mangolds, sown in small quantities at a time and in the proper seasons, will enable a farmer to keep a larger number of better fed cows, and at the same time double the produce of the cow, and produce a higher class of butter. If cows are well fed their calves are more valuable than those of half-starved animals. I know many who read these hints will say, "Oh, where is the manure to come from to grow these crops?" My answer is that, if a beginning is made the difficulty will be solved.

Begin to grow the crops, even on a small scale, and you will find as you go on increasing the extent of green crops that the better-fed cows give you the necessary supply of manure: of course the cattle should be housed during the heat of the day in summer, and at night in autumn, winter, and spring. Bog, if open-drained (by no means an expensive operation), will yield the heaviest green crops.

3. Be careful to breed from bulls of good shapes, whether Kerries or mixed breeds, and on no account put dairy cows to a badly-shaped, ugly animal; for, remember, it costs more to feed a bad calf than a good one, while a bad calf will not bring half the price of a good one.

4. Dairy farming in this country requires better management and greater exertion than in past years, for other countries have learned improved ways of making a first-class butter; and these countries are pouring into the English markets butter which is far superior to ours.

Unless we change our system of managing our dairy farming we shall not be able to sell our butter in the English markets, and get the prices foreigners now get.

England consumes annually from eleven to twelve million pounds' worth of foreign butter. Foreign countries have learned that Englishmen like nice, clean packages, and a palatable butter. Irishmen still put butter, tainted with turf-smoke, rotten water, dirt, and impure coarse salt into dirty brown packages, and wonder why they cannot get the old prices. While we have been slumbering other countries, such as France, Denmark, and Holland, have been making headway against us.

Butterine, which is made partly of refined fat, is more palatable than our badly-made dairy butter; and while butterine can be purchased by the middle and lower class consumers in England at sixpence per lb. they will not agree to give us more for our butter.

5. The creameries, which are now being introduced, are calculated to do much good; but really good results cannot be obtained, even through the instrumentality of creameries, unless we observe the most scrupulous cleanliness in our dairies where the cream is produced, and unless we learn to feed our cattle in the way I have described already.

These hints are very simple, and their observance absolutely essential to our success as dairy farmers.

If they are followed the results will be satisfactory and profitable to ourselves; for, instead of producing now one firkin of butter to the cow and selling it at £2, or perhaps less, the produce may be easily doubled, and the price also almost doubled, and the value of the calves certainly doubled. To put this

tatement in plain figures, I shall take the case of a nan having now eight cows badly fed. The produce f these, allowing a firkin per cow, on mountain land ill be as things were last year—

Eight cows, at £2, . .	£16	0	0
Say, six calves, at £1 5*s.*, .	7	10	0
	£23	10	0

The produce of eight cows on same description of and under a better system, such as I have endeavoured to explain, would be—

Eight cows (2 firkins to a cow), at £4,	£64	0	0
Six calves, ...	15	0	0
	£79	0	0

Here we have a difference of £55 10*s.* in dairy farmers' favour, or, in other words, he can, by means entirely within his own power, earn £79 by following ny simple suggestions, instead of having only a produce of £23 10*s.* by starving and unenlightened management.

The whole thing is proved at Inishfea beyond yea or nay. Last year 34 cows' butter sold for £530, besides which there were twenty-five calves reared. The butter produce of each cow was nearly £16. This high average is probably beyond the range of small farmers, but surely half of it, viz., £8, which is my calculation, is not.

As we are now beginning a system of dairy co-operation in this district, we must endeavour, by every means we can, to make it a success, and success means prosperity. In order to succeed, we must give up the old ways of management, no matter what the women, who think they know best, say; and we must begin at once to do as the people of France, Denmark, and Holland have been taught, by their own interest, to do. The chief things to observe are— APPENDIX VI.

Cleanliness,
Better feeding of cattle,
Attention to breeding,
Perseverance and honesty,

and the result must be—

Success and prosperity.

The old ways will always find us living from hand to mouth, and sometimes with empty hands and hungry mouths.

I give you these few simple facts, because nothing would give me greater pleasure than to see you both prosperous and happy, and I believe you have it in your own power to be both.

Remember that no laws can make a man independent.

Industry, perseverance, and honesty are the characteristics of a prosperous nation as well as of a prosperous individual; stripped of these, individuals as well as nations rapidly decay. This I believe a fundamental law of nature.

11*th May*, 1886.

APPENDIX VIII.

APPENDIX VIII.—STATISTICAL ABSTRACT—CO. KERRY.

A.—PREFATORY NOTE.

Special statistics relating to County Kerry have been prepared for the Commission by the Commissioner of Valuation (see pp. 224–6), the Registrar-General (see pp. 228–43), and the Department of Agriculture and Technical Instruction (see pp. 244–51), and certain returns have been furnished at the request of the Commission by the Local Governmont Board and the Congested Districts Board. Other information about County Kerry is available in different publications, *e.g.*, the Census Returns, the Annual Agricultural Statistics, the Annual Reports of the Irish Land Commission, the Estates Commissioners, the Congested Districts Board, &c.

All this statistical information has been brought together in the following pages, added to, and collated and explanatory notes have been added where required (*e.g.*, pp. 223, 227, 256, 270, and 279), with a view of forming a compact Statistical Abstract of the chief points of interest in County Kerry which may prove of assistance to the Commissioners during their sittings in County Kerry, and subsequently be helpful to readers of the evidence.

WALTER CALLAN,

26th June, 1907. *Secretary.*

B.—GENERAL STATISTICAL INFORMATION, TAKEN FROM THE CENSUS REPORT, 1901. COUNTY KERRY BOOK [CD. 1059–IV., 1902, pp. vii. and viii.].

The (Administrative) County of Kerry covers an area of 1,189,787 statute acres, or 5·7 per cent. of the total area of the country.

The number of persons in the County of Kerry according to the Census was—in 1881, 201,039; in 1891 179,136; and according to the recent Census, 165,726 (84,427 Males and 81,299 Females), or 7·5 per cent less than in 1891.

The number of distinct Families in the County at the time of the late enumeration was 29,254, the average number of persons in a family being thus 5·6; and the number of Inhabited Houses was 28,270, showing an average of 5·8 persons to each house. In calculating these averages, the Special Inmates of Public Institutions have been omitted.

The following Statement shows, by County Districts, as constituted under the Local Government (Ireland) Act, 1898, the number of persons in 1891 and 1901; and the increase or decrease during the decade :—

COUNTY DISTRICTS.	Population.		Increase or Decrease between 1891 and 1901.		
	1891.	1901.	Increase.	Decrease.	Rate per cent.
Killarney Urban, ..	5,510	5,656	146	—	2·6
Listowel Urban, ..	3,566	3,605	39	—	1·1
Tralee Urban, ..	9,318	9,867	549	—	5·9
Cahersiveen Rural, ..	23,854	22,435	—	1,419	5·9
Dingle Rural, ..	19,021	18,274	—	747	3·9
Kenmare Rural, ..	16,319	14,642	—	1,677	10·3
Killarney Rural, ..	35,050	31,440	—	3,610	10·3
Listowel No. 1 Rural, ..	31,031	27,789	—	3,242	10·4
Tralee Rural, ..	35,467	32,018	—	3,449	9·7
Total, ..	179,136	165,726	—	13,410	7·5

From the foregoing Statement it will be observed that there was an increase in each of the Urban Districts and a decrease in each of the Rural Districts. The highest percentage of decrease took place in Listowel No. 1 Rural, viz., 10·4, and in Killarney Rural and Kenmare Rural with 10·3 each.

Towns having, in 1901, a population of 2,000 and upwards are classified as Civic Areas.

The County contains four such Areas, viz. :—Killarney, Listowel, Tralee, and Caherciveen. In 1891 the population of these Areas amounted to 20,381; in 1901 it was 21,141, showing an increase of 760 persons, or 3·7 per cent.; in the Rural portions of the County the decrease was 8·9 per cent.

APPENDIX VIII.

The following statement shows the Educational status of the Inhabitants of the County of Kerry in 1891 and 1901, in so far as relates to the degrees of elementary education, relative to which inquiry was made on the Census Forms, the numbers on which the percentages are based being those for the County as constituted in the respective years :—

Degrees of Elementary Education.	Rate per cent. of Total Population.	
	1891.	1901.
Read and Write,	60·6	69·8
Read only,	6·6	4·2
Illiterate,	32·8	26·0
Total,	100	100

From the above it will be seen that whereas, according to the Returns of 1891, only 60·6 per cent. of the inhabitants, at all ages, could "read and write," in 1901, 69·8 per cent. could do so ; that the percentage of the population who could "read only" in 1891 was 6·6, and in 1901, 4·2 ; and that the percentage of the "illiterate" fell from 32·8 in 1891 to 26·0 in 1901.

In 1891 24·6 per cent. of the inhabitants, aged five years and upwards, were illiterate (22·3 per cent. of the males and 26·9 of the females); in 1901 the percentage was but 17·1 (15·8 of the males, and 18·4 of the females).

The number of children attending school in the County of Kerry, according to the Census of 1891 (week ending 30th May), was 34,172, or 48·2 per cent. of persons aged 5 years and under 20 in the County as then constituted ; in 1901 the number returned (for week ending 11th May) was 29,371, or 50·5 per cent. of the persons aged 5 and under 20.

In 1891 the number of persons in the County of Kerry (as then constituted) returned as Sick on the night of the Census was 1,317, or one in every 136 of the population ; in 1901 the number so returned was 1,210, or one in every 137 of the population ; of the latter number 671 were at their own homes, and 539 were in hospital.

The number of persons returned in 1891 as receiving relief under the Poor Law system was 5,178, or one in every 35 of the population ; of this number, 1,312 were inmates of Workhouses, and 3,866 were in receipt of outdoor relief ; in 1901 the number returned was 4,755, or one in every 35 of the population ; 1,261 of these were in Workhouses, and 3,494 on outdoor relief.

According to the returns of the Registrar-General, the number of Marriages registered in the County of Kerry during the ten years ended the 31st March, 1901, was 6,797, equal to an average annual rate of 3·9 per 1,000 of the population. The number registered in the whole of Ireland during the same period affords an annual average rate of 4·8 per 1,000.

The number of Births registered in the County during the ten years was 40,599, affording an average annual rate of 23·5 per 1,000 of the population, the average yearly rate for the whole of Ireland during the same period being 23·0 per 1,000.

The Deaths registered during the decennium amounted to 24,463, being equal to an average annual rate of 14·2 per 1,000 ; the corresponding rate for the whole of Ireland was 18·2 per 1,000.

The number of Emigrants during the ten years ending 31st March, 1901, who stated that they were from the County of Kerry, amounted to 38,599 (17,430 males and 21,169 females) ; the number for the decade ending 31st March, 1891, was 50,855 ; for that ending 31st March, 1881, 27,036 ; for that ending with March, 1871, 40,480 ; and for that ending with March, 1861, 54,672, making a total of 211,642 for the fifty years.

C.—Return showing the Population, Area, Valuation, and Average Valuation per head of Population in each Poor Law Union in County Kerry containing Congested Districts.

E.—RETURN SHOWING THE RATIO OF POPULATION TO VALUATION IN CERTAIN ELECTORAL DIVISIONS IN CO. KERRY, AND OTHER PARTICULARS.*

Specially prepared for the Commission.

EXPLANATORY NOTE.

This return (specially prepared by the Commissioner of Valuation), shows the Total rateable valuation 1906), the population (1901), and the average valuation per head of population in each Electoral Division in Co. Kerry.

(1.) Where that average is under 30*s.*

(2.) Where that average is between 30*s.* and 50*s.*, but is brought below 30*s.* by the exclusion from the dividend (*i.e.*, the total rateable valuation of the electoral division) of all ratings valued at over £50. In these cases the acreage and valuation of each excluded area is given.

(3.) Where the electoral division, though scheduled as congested, does not come within either of the above classes.

The total number of electoral divisions in Kerry is 165, of which 162 are rural and 3 urban. The total number of electoral divisions comprised in this return is 87, all rural. Of these, 10 are are not scheduled as congested, and are distinguished by an asterisk.

The total number of divisions in Co. Kerry scheduled in 1891 as congested was 77, of which 2 were then not below 30*s.* in point of average valuation per head of population. Between 1891 and 1901 the average valuation rose 20 per cent. (owing mainly to the decrease in population), and of the 77 divisions, 20 are now not below 30*s.* Of these 20 divisions, 9 are not below 30*s.* normally, but are when the total valuation of all ratings above £50 is excluded, and 11 are above 30*s.* even after these exclusions. The names of these divisions are printed in italics.

* This return is taken from a similar return for the whole of Ireland, which was published in the Appendices to the First Report of the Commission, pp. 356 *et seq.*

F.—STATISTICS RELATING TO THE NUMBER, ACREAGE, VALUATION AND POPULATION OF VARIOUS CLASSES OF HOLDINGS, AND TO THE CHIEF DIVISIONS OF THE LAND IN COUNTY KERRY.

Specially prepared for the Commission.

EXPLANATORY NOTE.

The information contained in the Tables I.-IV. has been specially prepared for the Commission by the Registrar-General from the office summaries of the Census of 1901. The importance of the figures and their interpretation were touched upon in a memorandum submitted by the Secretary to the Commission, and printed in the Appendices to the First Report of the Commission, pp. 351 *et seq.* It will suffice to remark here that, though nominally these tables are returns of "holdings," they are really returns of landholders, for, if one man has half-a-dozen farms in the same county, he is returned as having a single holding of their combined valuation. It is obvious that, so far as counties are concerned, these returns, being actually though not nominally returns of landholders, show more clearly the size of the problem requiring treatment than a return of holdings would—*e.g.*, a man has in County Kerry six holdings valued at £2, £4, £6, £10, £20, and £40. A return of holdings would in this case apparently suggest that there were at least three holdings needing enlargement; whilst the present returns more clearly indicate the situation by showing only one holding of £82 valuation. As regards the size of the remedial material that might be made available for relieving congestion, these returns might, however, mislead—*e.g.*, in the case taken above the returns would suggest that there was in County Kerry one holding of £82 valuation that possibly might be secured for the enlargement of small holdings; whilst in point of fact there are six holdings of varying size scattered over the county

The interpretation of the figures becomes more complicated when they are examined not for the whole of a county, but for the comparatively small area of an electoral division—the present unit of congestion. In these returns, where one man has several holdings in County Kerry, but in different electoral divisions, or has one holding which runs into two electoral divisions, the entire is allocated to the division containing the holding or the part of the holding of highest valuation; hence the figures in these returns do not represent the actual state of things in each electoral division, as they may include in such division land situate in other electoral divisions (of County Kerry), and may exclude land geographically belonging to the division itself. Thus, the area, population, or valuation shown for an electoral division might be larger or smaller than the actual area, population, or valuation of that division. Adjustments could have been made rectifying this, but they would have immensely complicated matters. Moreover, the returns would then have been based in part on holdings rather than on landholders, and this would, for the reason shown above, have exaggerated the size of the problem. Consequently the Commission, having considered the relative advantages of adjusted and unadjusted returns of holdings and landholders, decided that as regards most areas the unadjusted returns of landholders by electoral divisions would be the most useful.

The information contained in Tables V. and VI. has been specially prepared for the Commission by the Department of Agriculture and Technical Instruction for Ireland from the office summaries of the Agricultural Statistics of 1906. Their importance and interpretation were touched upon in the memorandum to which reference has been already made, and it will suffice to remark here that the difference between the number of holdings given in Table V. and the number given in Table I. is accounted for by the following causes:—

(1) Table V. is a return of holdings, and Table I. a return of landholders.

(2) Table I. refers to agricultural holdings only, and Table V. includes labourers' cottage holdings and gardens; and

(3) Differences of classification and adjustment.

APPENDIX VIII.

I.—TABLE showing Total Number of Holdings and Number of each of Eleven Classes, arranged according to Valuation, in the County of Kerry.

UNIONS AND ELECTORAL DIVISIONS.	Total Number of Holdings.	CLASSIFICATION OF HOLDINGS AND NUMBER IN EACH CLASS.										
		Not exceeding £4.	Above £4 and not exceeding £10	Above £10 and not exceeding £15.	Above £15 and not exceeding £20.	Above £20 and not exceeding £30.	Above £30 and not exceeding £40.	Above £40 and not exceeding £50.	Above £50 and not exceeding £100.	Above £100 and not exceeding £200.	Above £200 and not exceeding £300.	Above £300 in value.

The following detailed information as regards direct sales is taken from the Report of the Estates Commissioners for 1906 (pp. 28–35) :—

In the County Kerry (non-congested), 38 holdings, subject to judicial rents fixed or agreed to before the 14th August, 1896 (commonly called First Term Rents), amounting to £772 2*s.* 6*d.*, were sold at prices which came within the zones; the average number of years' purchase being 21·1, and the average percentage of reduction in the purchase annuity as compared with the rent being 31·4.

In the County Kerry (congested), 11 holdings, subject to First Term Rents amounting to £112 5*s.* 0*d.*, were sold at prices which came within the zones; the average number of years' purchase being 21·3, and the average percentage of reduction in the purchase annuity as compared with the rent being 30·7.

As regards holdings subject to rents fixed or agreed to since the 14th August, 1896 (commonly called Second Term Rents), 28, subject to a rental of £648 11*s.* 10*d.*, were sold in Kerry (non-congested) at a price within the zones; the average number of years' purchase being 23·9 and the percentage of reduction being 22·3.

One holding was sold at a price outside the zones, subject to a rental of £21 6*s.* 0*d.*, the number of years' purchase being 20·8, and the percentage of reduction being 32·4, *i.e.*, a greater percentage than the maximum zone reduction.

In Kerry (congested), 4 holdings, subject to Second Term Rents of £72 11*s.* 0*d.*, were sold, within the zones, for an average of 23·5 years' purchase, the average percentage of reduction being 23·6.

As regards non-judicial rent cases, 23 holdings in Kerry (non-congested), subject to a rental of £340 14*s.* 6*d.*, were sold for an average of 23·3 years' purchase, the average percentage of reduction being 24·2. In Kerry (congested), 5 holdings, subject to a rental of £180 15*s.* 8d., were sold for an average of 24·0 years' purchase; the average percentage of reduction being 22·0.

In Kerry (non-congested), one holding, subject to a rental of £3 3*s.* 8*d.*, was sold for £86, which was paid in cash by the purchaser.

M.—LOCAL TAXATION IN COUNTY KERRY.

The following STATEMENTS show (1) the Poor Rates in each Electoral Division in each Union for t financial years ending in 1881 and 1891; (2) County Cess in each Barony in the County in 1891—there is official information available as to County Cess in 1881; and (3) fuller details about the new Poor Rate for 19 and 1905. It must, however, be pointed out that the Rates in 1881 and 1891 cannot be compared with t Rates in 1901 and 1905. Prior to the Local Government (Ireland) Act, 1898, Poor Rate was charged Electoral Divisions and County Cess to Baronies. Now Union charges are levied over the whole Uni District charges on Rural Districts, County charges on the County, separate charges on special areas, and t whole is complicated by the changes made in the rates by the Local Government Act of 1898.

Before that Act the Poor Rate was paid by the tenant (except in the case of holdings valued at £4 and un where the landlord paid), but the tenant was entitled to deduct part of the amount paid from his rent, usua half. County Cess was paid and borne by the occupier, except in the case of holdings let after the August, 1870. In these cases, if the holding was valued at over £4, the tenant paid, but was entitled deduct from his rent part of the amount paid, usually one-half. If the holding was valued at £4 or un the County Cess was paid by the landlord.

Under the Act a Grant in Aid called the Agricultural Grant and amounting to £727,655 is made annually the local authorities. This Grant is equal to half the combined Poor Rate and County Cess which was certif to be taken to have been raised off agricultural land in what is known as the standard financial year. T balance of the money required for purposes formerly met out of the County Cess and the Poor Rate is n provided by means of the new Poor Rate, County Cess being no longer collected *eo nomine*.

The Act was intended to secure the benefit of the Agricultural Grant in respect of existing tenanc to the landlord as regards the old Poor Rate, and to the tenant as regards the County Cess. In order effect this it was provided that in the case of tenancies existing at the 1st April, 1899, the tenant should general, pay the new Poor Rate, but that the rent should be adjusted in such a way as to secure to landl and tenant their respective shares of the benefit of the Agricultural Grant. In the case of tenanc created after the 1st April, 1899, the tenant must, in general, pay the Poor Rate, and has no right deduct anything from his rent. Where a fair rent is fixed after the 1st April, 1899, special provis is made by Section 55 to ensure permanently to the occupier and the landlord their respective bene from the Agricultural Grant.

APPENDIX VIII.

(a) The enumeration of Emigrants from Irish Ports did not commence till the 1st of May, 1851.

APPENDIX VIII.

S.—STATE-AIDED EMIGRATION.

It may be as well to explain that under 12 and 13 Vic., cap. 104, sec. 26, Boards of Guardians were empowered to apply part of the rates and to borrow money "for the purpose of defraying or assisting to defray the expenses of the emigration of poor persons."

Under the Arrears of Rent (Ireland) Act, 1882 (45 and 46 Vic., c. 47), power was given to borrow from Public Funds on easier terms for the above purposes, and the Treasury might authorise the Commissioners of Public Works to make grants to Boards of Guardians for the same purposes, the total grants not to exceed £100,000, and the sums granted not to exceed £5 for each person. The grants were confined to the nine counties, part of which are at present scheduled as congested, the Unions of Belmullet, Newport, Swinford, Clifden, and Oughterard being specially mentioned.

Under the Tramways and Public Companies (Ireland) Act, 1883, (46 and 47 Vic., c. 43). the limit of the grant was increased to £200,000, of which one-quarter might be applied for the purpose of migrating "persons or families," and the limit of individual grants was increased to £8.

The total grants made under these sections amounted to £133,172 10*s.* 2*d.* up to 1891, when they were repealed by Section 35 of the Land Act of 1891, which established the Congested Districts Board.

The following TABLE shows the total number of State-aided emigrants from Kerry in 1883 and in 1884, and the amount of Grant to each Union.

Supplied by the Local Government Board.

UNION.	EMIGRATION SEASON, 1883.			EMIGRATION SEASON, 1884.			Total.	Total Grant.
	Canada.	Australia.	United States.	Canada.	Australia.	United States.

(a) Few people employ agricultural labourers in this district, except for short periods, when breakfast and dinner are allowed in addition to the wages set forth.
(b) Little or no employment for agricultural labourers.
(c) Very little employment for women or girls in winter, except those who are employed for twelve months at a fixed rate.

APPENDIX VIII.

V.—AGRICULTURAL SCHEMES OF THE DEPARTMENT IN OPERATION DURING YEAR 1906-7.

Scheme.	Estimated Cost to Joint Fund administered, by County Committee of Agriculture.
	£
Itinerant Instruction in Agriculture, ...	350
Poultry-keeping, ...	395
Buttermaking, ...	160
Horticulture, ...	175
Live Stock, ...	1,050
Subsidies to Shows, ...	165

Itinerant Instruction.

Four Itinerant Instructors are employed in this County under the County Scheme, namely, one in Agriculture, one in Poultry-keeping, one in Buttermaking, and one in Horticulture.

Agricultural Instruction in Congested Districts.

In addition to the Instructor employed under the County Scheme two Assistants are employed, under the supervision of the Agricultural Instructor, for the purposes of agricultural instruction in congested portions of County Kerry and West Cork :—William Dromey, Caherciveen ; James O'Donovan, Glenbeigh.

The following table shows the number of demonstration plots established this season, principally in the districts of Brosna, Glenbeigh and Caherciveen, viz. :—

Potatoes—Champions,	509	plots.	
Up-to-Date,	145	,,	
British Queen,	294	,,	
Oats—Potato,	156	,,	
Poland,	53	,,	
Banner,	208	,,	
Sandy,	180	,,	
Black Tartary,	66	,,	
Tawny,	8	,,	
Turnips—Swede,	74	,,	
Yellow Aberdeen,	13	,,	
Mangels—Long Red,	16	plots.	
Yellow Globe,	64	,,	
Grass and Clover,	48	,,	
Fertilisers—Potato,	138	,,	
Oats and Pasture,	26	,,	
Turnip,	22	,,	
Mangel,	21	,,	
Lime,	266	,,	
Total,	2,307	plots.	

Horse-breeding.

The following registered Thorough-bred Stallions are located in the county :—

Emperador	with	J. B. Rice, Abbeydorney.
Lorikeet	,,	Thomas Eagar, Jun., Milltown.
Menander	,,	George O'Gorman, Ballyhar.
Paul Kendal	,,	E. Rayel, Beenbawn, Dingle.

Emperador and Menander were supplied by the Department under their loan scheme, and Paul Kendal was also supplied by the Department on special terms.

The Department are also placing at their own expense two half-bred stallions in the county, one at Caherciveen and one at Kenmare.

The County Committee are issuing 150 free nominations of mares under the 1907 scheme, the animals having been selected at the following centres :—

Centre.	Nominations provided.
Tralee, ...	31
Castleisland, ...	14
Killorglin, ...	14
Killarney, ...	26
Listowel, ...	31
Kenmare, ...	11
Dingle, ...	13
Caherciveen, ...	10

ASS-BREEDING.

Stallion Asses have been placed by the Department with :—

Name.	*Address.*
Samuel Taylor,	Gortmaloon, Glencar.
John Donegan,	Dromkean, Causeway.
Cornelius W. Riordan,	Knockavinna, Brosna.
Michael Shea,	Farrantane, Castlegregory.
Joseph Wharton,	Aughatubrid, Caherciveen.
Timothy Daly,	Gortnagass, Kenmare.
Michael Mangan,	Behenaugh, Knocknagoshel.
Michael O'Connor,	Drimnamore, Sneem.
John O'Sullivan,	Ware House, Valentia Island.
J. B. P. Healy,	Tulligmore, Killorglin.

CATTLE-BREEDING.

Premium Bulls are located under the County Scheme with :—

Name.	*Address.*
Michael O'Donnell,	Killiney, Castlegregory.
Bridget Dineen,	Droumavally, Annascaul.
D. J. Cronin,	Ards, Killarney.
Joseph Stephens,	Rathpook, Milltown.
Denis P. Downing,	Direen East, Templenoe, Kenmare.
Jeremiah J. Doyle,	Whitefield, Beaufort, Killarney.
Philip Healy,	Ballygrennan, Listowel.
John T. Griffin,	Kilkerry, Ballymacelligott.
Redmond Roche,	Maglass. Gortatlea.
William Barrett,	The Kerries, Tralee.
John M. Healy,	Listrim, Ardfert.
Patrick Horgan,	Clencuttane, Killorglin.
C. J. O'Connell,	Waterview House, Portmagee.
R. S. Cussen,	Creeveen, Ballyduff, Lixnaw
George O'Gorman,	Killenure, Ballyhar.
Florence O'Sullivan,	Currans, Farranfore.
Daniel Barton,	Clogherbrien, Tralee.
Timothy O'Sullivan,	Kilannivane, Castleisland.
Patrick Trabt,	Toornageehy, Listowel.
Denis Devane,	Ballytrasna, Ventry, Dingle.
M. O'Connell,	Rathmorrel. Causeway.
Garrett Prendiville,	Wood Cordal, Castleisland.
William O'Connell,	Ballinorig, Ardfert.
Bryan M'Sweeney,	Annamore, Castleisland.
Patrick Casey,	Slieveaduff, Kenmare.
Patrick Brennan,	Doory East, Mastergeehy.

Premium Bulls are located with the following, the premiums being payable entirely out of the Department's funds :—

Name.	*Address.*
Thomas Stephens,	Cappagh, Caherciveen.
Timothy Brosnan,	Loughtfoder, Knocknagoshel.
Myles Cronin,	Caherulla, Ballyheigue.
William Byrne,	Faha, Ballybunion.
Michael Mangan,	Behenaugh, Abbeyfeale.
Thomas T. Foley,	Anglont, Killorglin.
James Driscoll,	Causeway, Tralee.
Michael O'Donnell,	Keelnagleera, Dingle.
B. J. Murphy,	Ahane, Brosna.
Timothy Moynihan,	Ballyduff, Knocknagoshel.
Cor. Kearin,	Scartaglin, Farranfore.
David O'Connor,	Lisheen, Rathmore.
Jacob Casey,	Knapogue, Brosna,
Patrick Evans,	Shanakeale, Castlemaine.
John Curran,	Knockacrogheen, Dingle.

Additional Bulls placed by the Department in Congested Districts on special instalment terms :—

Name.	*Address.*
Michael Sullivan,	Ardkernagh, Waterville.
Eugene Sullivan,	Carrough, Caderdaniel.
Michael Shea,	Ballard, Emlaghmore.
Michael Sullivan,	Inchies, Waterville.
J. P. Egan,	Gortagown, Tahill, Kenmare.
Michael Brien,	Corrha, Beaufort.
Edward Fitzgerald,	Bohocogram, Sneem.
Michael O'Reilly,	Scariff, Waterville.
Thomas Moriarty,	Church Farm, Ventry, Dingle.
James Styles,	Ballactra, Dingle.
John O'Brien,	Anlough, Caragh.
James O'Sullivan,	Derrynid, Tuosist, Kenmare.
John P. Randles,	Inchimore, Kenmare.
John O'Sullivan,	Warehouse, Valentia.
Peter O'Shea,	Derryknow, Tuosist, Kenmare.

APPENDIX VIII.

Swine-breeding.

Premium Boars are located with the following :—

Name.	*Address.*
Patrick Shea,	Annascaul.
Michael Sullivan,	Ardlahass, Killorglin.
John Brosna,	Ballybrack, Ballyhar.
Denis J. O'Connor,	Kilmancheen East, Abbeyfeale.
William Walsh,	Duagh, *via* Kilmorna.
John Jones,	Ballygologue, Listowel.
Michael Mangan,	Behenaugh, Knocknagoshel.
John Moriarty,	Kilgubbin, Ardfert.
John O'Connor,	Boheroe, Abbeydorney.
Patrick Glavin,	Knockanemore, Abbeydorney.
John Roche,	Ballyheigue.
Thomas O'Connor,	Ploverhill, Spa, Tralee.
Timothy Flynn,	Anglont, Kilorglin.
Jeremiah Griffin,	Creenagh, Bossa, Killarney.
John Lawlor,	Meenoghane, Causeway.
M. Houlihan,	Knocknacree, Ballyduff, Lixnaw.
Con Daly,	Killoluaig, Portnagee.

Premium Boars are located with the following, the premiums being payable entirely out of the Department funds :—

Name.	*Address.*
Daniel O'Donnell,	Brosna, Abbeyfeale.
James Sheehan,	Shanakeale, Castlemaine.
John O'Connor,	Ardmoniel, Killorglin.
Michael Shea,	Farrantane, Castlegregory.
Jeremiah Murphy, Sen.,	Milltown, Dingle.
B. Sullivan,	Fohart, Kenmare.
Jeremiah Murphy,	Ballyharry, Valentia Island.
M. Kevane,	Barracks *via* Chapel, Ventry.

Sheep-breeding.

Rams were placed on special terms with the following :—

Name.	*Address.*
Patrick O'Donnell,	Glounagalt, Camp.
John O'Donnell,	Curra, Camp.
Thomas Deen,	Curra, Camp.
Michael Breen,	Gerha, Beaufort.
James T. Shea,	Ballyledder, Beaufort.
Michael Cashman,	Brookhill, Beaufort.
James Connor,	Curraheen, Tralee.
John Sullivan,	Coolroe, Beaufort.

Poultry.

List showing the Names and Addresses of Holders of Egg Distribution Stations (Hens and Ducks) under the Poultry Scheme, 1906–7 :—

Name.	*Address.*
Morty Buckley,	Faha, Beaufort.
John Donovan,	Beale, Ballylongford.
Mr. Downing,	Derreen East, Templemore, Kenmare,
Miss Harnett,	Moynsha, Abbeyfeale.
Timothy Lynch,	Knockacurrane, Castlegregory.
Michael Mangan,	Behenaugh, Knocknagoshel.
James Moriarty,	Mountain Stage, Glenbeigh.
John Moriarty,	Kilgubbin, Ardfert.
B. Murphy,	Ahane, Brosna.
John Moynihan,	Glounagriseen, Rathmore.
Miss M'Carthy,	Cahir, Kenmare.
Michael M'Donnell,	Keelnagleeragh, Dingle.
Mrs. Nolan,	Moyvane House, Newtownsandes.
David O'Brien,	Ballinamanagh, Kilcummin.
Thomas O'Connor,	Camp, Ballymullen, Tralee.
Michael Shea,	Farrantane, Castlegregory.
Mrs. Stack,	Moyvane South, Newtownsandes.
Mrs. Trant,	Tournageehy, Listowel.
Mrs. Trant,	Tournageehy, Listowel.
Patrick Walsh,	Cordal East, Castleisland.
Mr. P. Kearney,	Ballincarrig, Ballyhar.

POULTRY—*continued.*

List showing the Names and Addresses of Holders of Egg Distribution Stations (Geese) under the Poultry Scheme, 1906–7 :—

Name.	*Address.*
Mrs. Buckley,	Knocknagouna, Faha.
Mr. T. Harty,	Ballinskelligs, Caherciveen.
J. P. Kennedy,	Gorticurrance, Annascaul.

List showing the Names and Addresses of Holders of Turkey Stations under the 1906–7 Scheme :—

Name.	*Address.*
T. Costelloe,	Trieneragh, Listowel.
W. Fuller,	Glenoe, Listowel.
Miss C. Harnett,	Moynsha, Abbeyfeale.
P. Kearney,	Ballincarrig, Ballyhar.
T. Lynch,	Knockacurrane, Castlegregory.
M. Mangan,	Behenaugh, Knocknagoshel.
J. Moriarty,	Kilgubbin, Ardfert.
J. Moynihan,	Glounagrisheen, Rathmore.
Mrs. B. O'Brien	Ballinamanagh, Killarney.
M. O'Connor,	Drimnamore, Sneem.
T. O'Connor,	Ploverhill, Spa.
J. Riordan,	Rangue, Killorglin.
M. Riordan,	Mountain Stage, Glenbeigh.
M. Shea,	Farrantane, Castlegregory.
D. Sullivan,	Fermoyle, Caherciveen.
Mrs. Trant,	Tournageehy, Listowel.
P. Walsh,	Cordal East, Castleisland.
Miss M'Carthy,	Cahir, Kenmare.
Mrs. D. Cotter,	Meen, Knocknagoshel.
Mrs. Buckley,	Knocknagouna, Faha.

W.—NOTE ON MIGRATORY LABOURERS

The special characteristics of the temporary migration of agricultural labourers from the congested districts which distinguish it from apparently similar movements of labour in other counties and from the ordinary examples of the mobility of labour in other trades, have been briefly discussed in the Donegal Statistical Abstract (see Appendix to Second Report of Commission, Cd. 3319, 1907, pp. 314-5). The total number of persons (including females) who had temporarily migrated from Ireland, or who at the time of the collection of the Agricultural Statistics in 1906 had expressed their intention of subsequently migrating, was 15,286. Of this number 297 were resident in County Kerry. Of these only 19 were landholders, but of the landless labourers 116 were the sons, and 104 were the daughters, of landholders who worked on their parents' farm when at home. The following Table taken from the Annual Report of the Department of Agriculture on Irish Migratory Labourers for 1906 (pp. 30 and 31), gives further information on the subject.

POOR LAW UNION.	Number of Migratory Agricultural Labourers not Landholders.	NUMBER OF MIGRATORY AGRICULTURAL LABOURERS HAVING LAND, AND AREA OF THEIR HOLDINGS.												Total Number of Migratory Agricultural Labourers	WHERE EMPLOYED.			Number of Migratory Agricultural Labourers who had not left their homes at the time of the Inquiry, included in foregoing Columns.
		Not exceeding 1 acre.	Above 1 and not exceeding 2 acres.	Above 2 and not exceeding 3 acres.	Above 3 and not exceeding 4 acres.	Above 4 and not exceeding 5 acres.	Above 5 and not exceeding 10 acres.	Above 10 and not exceeding 15 acres.	Above 15 and not exceeding 20 acres	Above 20 and not exceeding 25 acres.	Above 25 and not exceeding 30 acres.	Above 30 and not exceeding 40 acres.	Above 40 acres.		In England.	In Scotland.	Elsewhere in Ireland.

APPENDIX IX—STATISTICAL ABSTRACT—CO. CORK.

A.—PREFATORY NOTE.

Special statistics relating to County Cork have been prepared for the Commission by the Commissioner of Valuation (see pp. 296–9), the Registrar-General (see pp. 301–32), and the Department of Agriculture and Technical Instruction (see pp. 333–40), and certain returns have been furnished at the request of the Commission by the Local Government Board and the Congested Districts Board. Other information about County Cork is available in different publications, *e.g.*, the Census Returns, the Annual Agricultural Statistics, the Annual Reports of the Irish Land Commission, the Estates Commissioners, the Congested Districts Board, &c.

All this statistical information has been brought together in the following pages, added to, and collated; and explanatory notes have been added, where required (*e.g.*, pp. 296, 300, 345, 366, and 378), with a view of forming a compact Statistical Abstract of the chief points of interest in County Cork which may prove of assistance to the Commissioners during their sittings in County Cork, and subsequently be helpful to readers of the evidence.

It is important to note under the Act creating the Congested Districts Board (54 and 55 Vic., c. 48, s. 36 (1)), each riding of Cork was treated as a separate county, and that as 20 per cent. of the population of the East Riding did not live in Electoral Divisions in which the average valuation per head was under 30*s.*, no such divisions were scheduled, and that therefore all the divisions scheduled as congested in Co. Cork are in the West Riding.

WALTER CALLAN,
Secretary.

26*th June*, 1907.

B.—GENERAL STATISTICAL INFORMATION, TAKEN FROM THE CENSUS REPORT, 1901, COUNTY CORK BOOK (pp. vi., vii., viii.)

The County and City of Cork cover an area of 1,849,686 statute acres, or 8·9 per cent. of the total area of the country.

The number of persons in the County and City of Cork according to the Census was—in 1881, 495,607; in 1891, 438,432; and according to the recent Census, 404,611 (202,297 Males and 202,314 Females), or 7·7 per cent. less than in 1891.

The number of distinct Families in the County and City at the time of the late enumeration was 76,747, the average number of persons in a family being thus 5·1; and the number of Inhabited Houses was 70,793, showing an average of 5·5 persons to each house. In calculating these averages, the Special Inmates of Public Institutions have been omitted.

The following Statement shows, by County Districts (as constituted under the Local Government (Ireland) Act, 1898), the number of persons in 1891 and 1901; and the increase or decrease during the decade :—

COUNTY DISTRICTS.	Population.		Increase or Decrease between 1891 and 1901.		
	1891.	1901.	Increase.	Decrease.	Rate per cent.
Clonakilty Urban, ...	3,221	3,098	.	123	3·8
Fermoy Urban, ...	6,469	6,126	.	343	5·3

Total of City of Cork, ...	75,345	76,122	777	.	1·0
Total of County and City, ...	438,432	404,611	.	33,821	7·7

* Now Charleville.

APPENDIX IX.

From the foregoing Statement it will be observed that there were increases in Cork City, Middleton Urban and Cork Rural, and decreases in all the other County Districts. The highest percentage of decrease took place in Clonakilty Rural and Middleton Rural, viz., 14·3 and 13·8, respectively; and the lowest in Skibbereen Urban and Kilmallock No. 2 Rural, viz., 1·9 and 2·5, respectively.

Towns having, in 1901, a population of 2,000 and upwards are classified as Civic Areas.

The County contains 15 such Areas, viz., Clonakilty, Cork, Fermoy, Kinsale, Middleton, Queenstown, Skibbereen, Youghal, Bandon, Bantry, Charleville, Macroom, Mallow, Mitchelstown, and Passage West. In 1891 the population of these Areas amounted to 131,627; in 1901 it was 129,137, showing a decrease of 2,490 persons, or 1·9 per cent.; in the rural portions of the County the decrease was 10·2 per cent.

The following Statement shows the Educational status of the Inhabitants of the County and City of Cork in 1891 and 1901, in so far as relates to the degrees of Elementary Education relative to which inquiry was made on the Census Forms:—

Degrees of Elementary Education.	Rate per cent of Total Population.	
	1891.	1901.
Read and Write, ...	65·3	73·1
Read only, ...	6·8	4·4
Illiterate, ...	27·9	22·5
Total, ...	100·0	100·0

From the above it will be seen that whereas, according to the Returns of 1891, only 65·3 per cent. of the Inhabitants, at all ages, could "read and write," in 1901, 73·1 per cent. could do so; that the per-centage of the population who could "read only" in 1891 was 6·8, and in 1901, 4·4; and that the per-centage of the "illiterate" fell from 27·9 in 1891 to 22·5 in 1901.

In 1891 20·0 per cent. of the inhabitants aged five years and upwards were illiterate (18·5 per cent. of the males and 21·4 of the females); in 1901 the per-centage was but 14·2 (13·2 of the males, and 15·1 of the females).

The number of children attending school in the County and City of Cork, according to the Census of 1891 (week ending 30th May), was 76,418, or 48·9 per cent. of persons aged 5 years and under 20 in the County as then constituted; in 1901 the number returned (for week ending 11th May), was 68·145, or 52.9 per cent. of the persons aged 5 and under 20.

In 1891 the number of persons in the County and City of Cork (as then constituted) returned as Sick on the night of the Census, was 3,900, or one in every 112 of the population; in 1901 the number so returned was 3,910, or one in every 103 of the population; of the latter number 1,423 were at their own homes, and 2,487 were in hospital.

The number of persons returned in 1891 as receiving relief under the Poor Law System was 16,078, or one in every 27 of the population; of this number 5,324 were inmates of Workhouses, and 10,754 were in receipt of outdoor relief; in 1901 the number returned was 13,565, or one in every 30 of the population; 5,408 of these being in the Workhouses, and 8,157 on outdoor relief.

According to the Returns of the Registrar-General, the number of marriages registered in the County and City of Cork during the ten years ending 31st March, 1901, was 18,525, equal to an average annual rate of 4·4 per 1,000 of the population. The number registered in the whole of Ireland during the same period, affords an average annual rate of 4·8 per 1,000.

The number of Births registered in the County and City during the ten years was 93,926, affording an average annual rate of 22·3 per 1,000 of the population, the average yearly rate for the whole of Ireland during the same period being 23·0 per 1,000.

The Deaths registered during the decennium amounted to 75,054, being equal to an average annual rate of 17·8 per 1,000; the corresponding rate for the whole of Ireland was 18·2 per 1,000.

The number of Emigrants during the ten years ending 31st March, 1901, who stated that they were from the County or City of Cork, amounted to 77,072 (36,770 males and 40,302 females); the number for the decade ending 31st March, 1891, was 83,533; for that ending 31st March, 1881, 74,209; for that ending with March, 1871, 118,669; and for that ending with March, 1861, 148,009, making a total of 501,492 for the fifty years.

C.—Return showing the Population, Area, Valuation, and Average Valuation per Head of Population in each Poor Law Union in the County of Cork containing Congested Districts.

Supplied by the Congested Districts Board.

APPENDIX IX.

E.—RETURN SHOWING THE RATIO OF POPULATION TO VALUATION IN CERTAIN ELECTORAL DIVISIONS IN COUNTY CORK, AND OTHER PARTICULARS.*

Specially prepared for the Commission.

EXPLANATORY NOTE.

This return (specially prepared by the Commissioner of Valuation), shows the total rateable valuation (1906), the population (1901), and the average valuation per head of population in each Electoral Division.

(1.) Where that average is under 30*s.*

(2.) Where that average is between 30*s.* and 50*s*, but is brought below 30*s.* by the exclusion from the dividend (*i.e.*, the total rateable valuation of the electoral division) of all ratings valued at over £50. In these cases the acreage and valuation of each excluded area is given.

(3.) Where the electoral division though scheduled as congested does not come within either of the above classes.

The total number of electoral divisions in Cork is 322, of which 313 are rural and 9 urban. The total number of electoral divisions comprised in the return is 42, all rural; of these 9 are not scheduled as congested and are distinguished by an asterisk. Some of these were below 30*s.* in 1891, but, being in East Cork, were not scheduled.

The total number of divisions in County Cork, scheduled in 1891 as congested was 33, of which 5 were then not below 30*s.*, in point of average valuation per head of population. Between 1891 and 1901 the average valuation rose about 14 per cent. (owing mainly to the decrease in population). Of the 33 scheduled divisions, 14 are not now below 30*s.* Of these 14 divisions, 3 are not below 30*s.* normally, but are when the total valuation of all ratings above £50 is excluded, and 11 are above 30*s.* even after these exclusions. The names of these divisions are printed in italics.

APPENDIX IX.

F.—STATISTICS RELATING TO THE NUMBER, ACREAGE, VALUATION AND POPULATION OF VARIOUS CLASSES OF HOLDINGS, AND TO THE CHIEF DIVISIONS OF THE LAND IN THE COUNTY AND CITY OF CORK.

Specially prepared for the Commission.

EXPLANATORY NOTE.

The information contained in the Tables I.-IV. has been specially prepared for the Commission by the Registrar-General from the office summaries of the Census of 1901. The importance of the figures and their interpretation were touched upon in a memorandum submitted by the Secretary to the Commission, and printed in the Appendices to the first Report of the Commission, pp. 351 *et seq.* It will suffice to remark here that, though nominally these tables are returns of "holdings," they are really returns of landholders, for, if one man has half-a-dozen farms in the same county, he is returned as having a single holding of their combined valuation. It is obvious that, so far as counties are concerned, these returns, being actually though not nominally returns of landholders, show more clearly the size of the problem requiring treatment than a return of holdings would—*e.g.*, a man has in County Cork six holdings valued at £2, £4, £6, £10, £20, and £40. A return of holdings would in this case apparently suggest that there were at least three holdings needing enlargement; whilst the present returns more clearly indicate the situation by showing only one holding of £82 valuation. As regards the size of the remedial material that might be made available for relieving congestion, these returns might, however, mislead—*e.g.*, in the case taken above the returns would suggest that there was in County Cork one holding of £82 valuation that possibly might be secured for the enlargement of small holdings; whilst in point of fact there are six holdings of varying size scattered over the county.

The interpretation of the figures becomes more complicated when they are examined not for the whole of a county, but for the comparatively small area of an electoral division—the present unit of congestion. In these returns where one man has several holdings in County Cork, but in different electoral divisions, or has one holding which runs into two electoral divisions, the entire is allocated to the division containing the holding or the part of the holding of highest valuation; hence the figures in these returns do not represent the actual state of things in each electoral division, as they may include in such division land situate in other electoral divisions (of County Cork), and may exclude land geographically belonging to the division itself. Thus the area, population, or valuation shown for an electoral division might be larger or smaller than the actual area, population, or valuation of that division. Adjustments could have been made rectifying this, but they would have immensely complicated matters. Moreover, the returns would then have been based in part on holdings rather than on landholders, and this would, for the reason shown above, have exaggerated the size of the problem. Consequently the Commission, have considered the relative advantages of adjusted and unadjusted returns of holdings and landholders, decided that as regards most areas the unadjusted returns of landholders by electoral divisions would be the most useful.

The information contained in Tables V. and VI. has been specially prepared for the Commission by the Department of Agriculture and Technical Instruction for Ireland from the office summaries of the Agricultural Statistics of 1906. Their importance and interpretation were touched upon in the memorandum to which reference has been already made, and it will suffice to remark here that the difference between the number of holdings given in Table V. and the number given in Table I. is accounted for by the following causes:—

(1) Table V is a return of holdings, and Table I. a return of landholders;

(2) Table I. refers to agricultural holdings only, and Table V. includes labourers' cottage holdings and gardens; and

(3) Differences of classification and adjustment.

1.—TABLE showing Total Number of Holdings and Number of each of Eleven Classes, arranged according to Valuation, in the County of Cork.

The following detailed information as regards direct sales is taken from the Report of the Estates Commissioners for 1906 (pp. 28–35.)

In the County Cork (non-congested) 366 holdings, subject to judicial rents fixed or agreed to before the 14th August, 1896 (commonly called First Term Rents), amounting to £11,148 11*s.* 10*d.*, were sold at prices which came within the zones, the average number of years' purchase being 21·2, and the average percentage of reduction in the purchase annuity as compared with the rent being 31·1.

In County Cork (non-congested) one holding, subject to a First Term Rent of £27 6*s.*, was sold at a price outside the zones, the number of years' purchase being 25·6, and the reduction 16·8 per cent., which is less than the minimum zone reduction; and 6 holdings, subject to a rental of £121 3*s.* 4*d.*, were sold at 17·5 years' purchase, the percentage of reduction being 43·1—which is greater than the maximum zone reduction.

In the County Cork (congested) 10 holdings, subject to First Term Rents amounting to £83 8*s.* 6*d.*, were sold at prices which came within the zones; the average number of years purchase being 19·8, and the average percentage of reduction in the purchase annuity as compared with the rent being 35·6. Seven holdings, subject to a rental of £103 8*s.* 6*d.*, were sold at prices which came outside the zones; the average number of years' purchase being 17·8, and the percentage of reduction, 42·1—which is greater than the maximum zone reduction.

As regards holdings subject to rents fixed or agreed to since the 14th August, 1896 (commonly called Second Term Rents) 145, subject to a rental of £3,989 3*s.* 10*d.*, were sold in Cork (non-congested) at a price within the zones, the average number of years' purchase

Fifty-two holdings were sold at a price outside the zones, subject to a rental of £1,061 6*s.* 6*d.*, the number of years' purchase being 20·0, and the percentage of reduction 35·0, *i.e.*, a greater percentage than the maximum zone reduction.

In Cork (congested) 36 holdings, subject to Second Term Rents of £389 12*s.* 4*d.*, were sold, within the zones, for an average of 22·1 years' purchase, the average percentage of reduction being 28·1. One holding was sold at a price outside the zones, subject to a rental of £29 19*s.*, the number of years' purchase being 21·5, and the percentage of reduction being 30·1.

As regards non-judicial rent cases, 343 holdings in Cork (non-congested), subject to a rental of £6,542 18*s.* 7*d.* were sold for an average of 20·6 years' purchase, the average percentage of reduction being 33·0. In Cork (congested) 11 holdings, subject to a rental of £54 10*s.* 6*d.*, were sold for an average of 20·6 years' purchase, the average percentage of reduction being 33·0.

In Cork (non-congested) 30 holdings, subject to a rental of £466 17*s.* 10*d.*, were sold for £9,128, of which £1,318 was paid in cash by the purchaser, and £7,810 was advanced by the Irish Land Commission. In Cork (congested) one holding, subject to a rental of £1, was sold for £25, all of which sum was paid by the purchaser. One demesne was sold in Cork (non-congested) under Section 3, and one parcel was sold to Trustees under Sec-

M.—LOCAL TAXATION IN THE COUNTY (AND CITY OF) CORK.

The following STATEMENTS show (1) the Poor Rates in each Electoral Division in each Union for the financial years ending in 1881 and 1891 ; (2) County Cess in each Barony in the County in 1891—there is no official information available as to County Cess in 1881 ; and (3) fuller details about the new Poor Rate for 1901 and 1905. It must, however, be pointed out that the Rates in 1881 and 1891 cannot be compared with the Rates in 1901 and 1905. Prior to the Local Government (Ireland) Act, 1898, Poor Rate was charged to Electoral Divisions and County Cess to Baronies Now Union charges are levied over the whole Union, District charges on Rural Districts, County charges on the County, separate charges on special areas, and the whole is complicated by the charges made in the Rates by the Local Government Act of 1898.

Before that Act the Poor Rate was paid by the tenant (except in the case of holdings valued at £4 and under, where the landlord paid), but the tenant was entitled to deduct part of the amount paid from his rent, usually half. County Cess was paid and borne by the occupier, except in the case of holdings let after the 1st August, 1870. In these cases, if the holding was valued at over £4, the tenant paid, but was entitled to deduct from his rent part of the amount paid, usually one-half. If the holding was valued at £4 or under, the County Cess was paid by the landlord.

Under the Act a Grant in Aid, called the Agricultural Grant, and amounting to £727,655, is made annually to the local authorities. This Grant is equal to half the combined Poor Rate and County Cess which was certified to be taken to have been raised off agricultural land in what is known as the standard financial year. The balance of the money required for purposes formerly met out of the County Cess and the Poor Rate is now provided by means of the new Poor Rate, County Cess being no longer collected *eo nomine*.

The Act was intended to secure the benefit of the Agricultural Grant in respect of existing tenancies to the landlord as regards the old Poor Rate, and to the tenant as regards the County Cess. In order to effect this it was provided that in the case of tenancies existing at the 1st April, 1899, the tenant should, in general, pay the new Poor Rate, but that the rent should be adjusted in such a way as to secure to landlord and tenant their respective shares of the benefit of the Agricultural Grant. In the case of tenancies created after the 1st April, 1899, the tenant must, in general, pay the Poor Rate, and has no right to deduct anything from his rent. Where a fair rent is fixed after the 1st April, 1899, special provision is made by Section 55 to ensure permanently to the occupier and the landlord their respective benefits from the Agricultural Grant.

APPENDIX IX.

(a) The Enumeration of Emigrants from Irish Ports did not commence till the 1st of May, 1891.

APPENDIX IX.

S.—STATE-AIDED EMIGRATION.

*** *Information was desired by the Commission as to the number of families who, with the assistance of Public Funds, emigrated from each Union in* 1883-4.

It may be as well to explain that under 12 and 13 Vic., c. 104, sec. 26, Boards of Guardians were empowered to apply part of the rates and to borrow money "for the purpose of defraying or assisting to defray the expenses of the emigration of poor persons."

Under the Arrears of Rent (Ireland) Act, 1882 (45 and 46 Vic., c. 47), power was given to borrow from Public Funds on easier terms for the above purposes, and the Treasury might authorise the Commissioners of Public Works to make grants to Boards of Guardians for the same purposes, the total grants not to exceed £100,000, and the sums granted not to exceed £5 for each person. These grants were confined to the nine counties, part of which are at present scheduled as congested, the Unions of Belmullet, Newport, Swinford, Clifden, and Oughterard, being specially mentioned.

Under the Tramways and Public Companies (Ireland) Act, 1883 (46 and 47 Vic., c. 43), the limit of the grant was increased to £200,000, of which one-quarter might be applied for the purpose of migrating "persons or families," and the limit of individual grants was increased to £8.

The total grants made under these sections amounted to £133,172 10*s.* 2*d.* up to 1891, when they were repealed by Section 35 of the Land Act of 1891, which established the Congested Districts Board.

The following Table shows the total number of State-aided Emigrants from Cork in 1883–1884, and the amount of grant to each Union.

Supplied by the Local Government Board.

Union.	Emigration Season, 1883.			Emigration Season, 1884.			Total.	Total Grant.

Mrs. Pomeroy,	Knockcahill, Banteer.

APPENDIX IX.

W.—NOTE ON MIGRATORY LABOURERS.

The special characteristics of the temporary migration of agricultural labourers from the congested districts which distinguish it from apparently similar movements of labour in other counties and from the ordinary examples of the mobility of labour in other trades, have been briefly discussed in the Donegal Statistical Abstract (see Appendix to Second Report of Commission, Cd. 3319, 1907, pp. 314–5). The total number of persons (including females) who had temporarily migrated from Ireland, or who at the time of the collection of the Agricultural Statistics in 1906 had expressed their intention of subsequently migrating, was 15,286. Of this number 73 were resident in County Cork. Of these only 10 were landholders, but of the landless labourers 26 were the sons, and 14 were the daughters of landholders who worked on their parents' farm when at home. The following Table taken from the Annual Report of the Department of Agriculture on Irish Migratory Labourers for 1906 (pp. 28–31), gives further information on the subject.

Poor Law Union.	Number of Migratory Agricultural Labourers not Landholders.	Number of Migratory Agricultural Labourers having Land, and Area of their Holdings.												Total Number of Migratory Agricultural Labourers	Where Employed.			Number of Migratory Agricultural Labourers who had not left their homes at the time of the Inquiry, included in foregoing Columns
		Not exceeding 1 acre.	Above 1 and not exceeding 2 acres.	Above 2 and not exceeding 3 acres.	Above 3 and not exceeding 4 acres.	Above 4 and not exceeding 5 acres.	Above 5 and not exceeding 10 acres. ROYAL COMMISSION ON CONGESTION IN IRELAND.

WARRANT APPOINTING THE COMMISSION.

EDWARD *R. & I.*

EDWARD THE SEVENTH, by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas King, Defender of the Faith, to

Our right trusty and right well-beloved Cousin and Councillor WILLIAM HUMBLE, EARL OF DUDLEY, Knight Grand Cross of Our Royal Victorian Order;

Our right trusty and well-beloved Councillor SIR ANTONY PATRICK MACDONNELL, Knight Grand Commander of Our Most Exalted Order of the Star of India, Knight Commander of Our Royal Victorian Order, Under Secretary to Our Lieutenant-General and General Governor of that part of Our United Kingdom of Great Britain and Ireland called Ireland;

Our right trusty and well-beloved Councillor SIR JOHN CHARLES READY COLOMB, Knight Commander of Our Most Distinguished Order of Saint Michael and Saint George;

Our right trusty and well-beloved Councillor SIR FRANCIS MOWATT, Knight Grand Cross of Our Most Honourable Order of the Bath, Companion of Our Imperial Service Order; and

Our trusty and well-beloved :—

The Most Reverend PATRICK O'DONNELL, Doctor in Divinity;

JOHN ANNAN BRYCE, Esquire;

WALTER INCH KAVANAGH, Esquire;

CONOR O'KELLY, Esquire; and

ANGUS SUTHERLAND, Esquire; Chairman of the Fishery Board for Scotland;

GREETING!

Whereas We have deemed it expedient that a Commission should forthwith issue to inquire into and report upon the operation of the Acts dealing with Congestion in Ireland, the working of the Congested Districts Board, and the Land Commission under these Acts, and the relations of the Board with the Land Commission and the Department of Agriculture and Technical Instruction; what areas (if any) outside the districts now scheduled as congested, require to be dealt with as congested; what lands are most conveniently situated for the relief of congestion; what changes in law or administration are needed for dealing with the problem of congestion as a whole, for facilitating the migration of the surplus population from congested areas to other lands, and generally for bettering the condition of the people inhabiting congested areas.

Now know ye that We, reposing great trust and confidence in your knowledge and ability, have nominated, constituted and appointed, and do by these Presents nominate, constitute and appoint you the said William Humble, Earl of Dudley (Chairman); Sir Antony Patrick MacDonnell; Sir John Charles Ready Colomb; Sir Francis Mowatt; Patrick O'Donnell; John Annan Bryce; Walter Inch Kavanagh; Conor O'Kelly; and Angus Sutherland to be Our Commissioners for the purposes of the said Inquiry.

And for the better effecting the purposes of this Our Commission, We do by these Presents give and grant unto you, or any three or more of you, full power to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission; and also to call for, have access to, and examine all such books, documents, registers and records as may afford you the fullest information on the subject; and to inquire of and concerning the premises by all other lawful ways and means whatsoever.

And We do by these Presents authorize and empower you, or any three or more of you, to visit and personally inspect such places as you may deem it expedient so to inspect for the more effectual carrying out of the purposes aforesaid, and to employ such persons as you may think fit to assist you in conducting any inquiry which you may hold.

And We do by these Presents will and ordain that this Our Commission shall continue in full force and virtue, and that you, Our said Commissioners, or any three or more of you, may from time to time proceed in the execution thereof and of every matter and thing therein contained, although the same be not continued from time to time by adjournment.

And We do further ordain that you, or any three or more of you, have liberty to report your proceedings under this Our Commission from time to time, if you shall judge it expedient so to do.

And Our further will and pleasure is that you do, with as little delay as possible, report to Us under your hands and seals, or under the hands and seals of any three or more of you, your opinion upon the matters herein submitted for your consideration.

Given at Our Court at *St. James's*, the 20th day of July, 1906, in the sixth year of Our Reign.

By His Majesty's Command.

H. J. GLADSTONE

Appointment of Secretary.

DUBLIN CASTLE,
July 24, 1906.

WALTER ERNEST EVERARD CALLAN, Esquire, B.L., The Castle, Dublin, has been appointed to be Secretary of the Royal Commission appointed to inquire into and report upon the operation of the Acts dealing with Congestion in Ireland.

ROYAL COMMISSION ON CONGESTION IN IRELAND.

NINTH REPORT.

TO THE KING'S MOST EXCELLENT MAJESTY.

MAY IT PLEASE YOUR MAJESTY,

We, the Commissioners appointed by Your Majesty on the 20th July, 1906,

> "To inquire into and report upon the operation of the Acts dealing with Congestion in Ireland, the working of the Congested Districts Board, and the Land Commission under these Acts, and the relations of the Board with the Land Commission and the Department of Agriculture and Technical Instruction; what areas (if any) outside the districts now scheduled as congested, require to be dealt with as congested; what lands are most conveniently situated for the relief of congestion; what changes in law or administration are needed for dealing with the problem of congestion as a whole, for facilitating the migration of the surplus population from congested areas to other lands, and generally for bettering the condition of the people inhabiting congested areas,"

Availing ourselves of Your Majesty's permission to report our proceedings from time to time, desire to submit to Your Majesty, as an Appendix to this ninth preliminary Report, minutes of the evidence taken in the County of Mayo during the months of August and September, and statements and returns in writing that have been furnished to us in connection therewith.

We think that the immediate publication of these documents is desirable.

All of which we humbly submit for Your Majesty's most gracious consideration.

DUDLEY, *Chairman.*
A. P. MACDONNELL.
JOHN C. R. COLOMB.
FRANCIS MOWATT.
✠ PATRICK O'DONNELL.
JOHN ANNAN BRYCE.
WALTER KAVANAGH.
CONOR O'KELLY.
ANGUS SUTHERLAND.

WALTER CALLAN,
Secretary.

DUBLIN. Dated this 25th day of November, 1907.

ROYAL COMMISSION ON CONGESTION IN IRELAND.

APPENDIX

TO THE

NINTH REPORT.

MINUTES OF EVIDENCE

(TAKEN IN CO. MAYO, 21ST AUGUST TO 3RD SEPTEMBER, 1907),

AND

DOCUMENTS RELATING THERETO.

Presented to both Houses of Parliament by Command of His Majesty.

DIGEST OF EVIDENCE.

M'NULTY, Mr. JOHN.

See pp. 1-3.

Acreage of Holdings in Balla Rural District.

The area of Balla Rural District was 8,936 acres, of which about 4,400 acres were in the occupation of 201 tenants of under £5 valuation, 46740.—4,522 acres was grazing land, 46740-4.—Held by 37 graziers, 46745, 46755.—Lime stone and clay were found in it, 46757.—Some was moorland, some good land, though sticky, 46758.—Very little was mountain land, 46747-8.—Witness was unable to state the exact proportion of grass land, bog, and rough grazing, but the land was chiefly grazing land, 46749-50.—Witness described as waste land all the land in the occupation of graziers, or land not held by tenants under the Act of 1881; it was only occupied by bullocks, and did not relieve congestion; the former tenants had emigrated or been evicted, 46766, 46791-4.

Holdings in Croaghmoyle Electoral Division. Parish of Islandeady.

The area of Croaghmoyle was 7,150 acres, of which only 654 acres were in the occupation of small farmers, 46767.—Forty-one occupiers were under £15 valuation, 46772.—Their valuation was £551 8*s.*, 46777-9.—Only four occupiers were over £15 valuation; their valuation was £131 10*s.*—It was a very poor division; a congested area, 46771-5.

Holdings on Ballinafad.

The area of the electoral division of Ballinafad was 7,150 acres, of which 3,420 acres were under grazing, 46760.—All land in this division over £15 valuation was untenanted, or perhaps a small area tenanted, 46763, 46764.

Uneconomic Holdings in Ballina Union.

The number of uneconomic holdings in Ballina Union was 2,242, 46813-6.—The valuation of these was £4, 46817.—The number valued between £4 and £8 was 1,593, 46817.—£8 was not a standard, 46818.—The valuation of £15 was put on different areas, 46765.—Valuation varies from £1 to 5*s.* or 2*s.* 6*d.* per acre, 46765.

Landlords in Balla.

The Earl of Arran held a valuation of £781 in Ballina Union, 46811.—This included demesne, 46812.—Several landlords in Balla division, 46751.—Sir Henry L. Blosse owned 117 acres, at a rateable valuation of £1 12*s.*, 46762.—And twenty-nine acres valued at £7, in the township of Ballinagrane, 46768.

Stock of Tenant Farmers.

The tenant farmers with uneconomic holdings were obliged to sell their stock very young, at ages varying from four to twelve months, 46795-6.—Stock was sold to graziers and larger tenant farmers, and at fairs and markets, 46798-46800.—Markets for stock would not be injured by taking up grass lands, but probably improved, 46801-2, 46804.

Taking up Grass Lands.

Grass lands should be used to enlarge small holdings, 46789.—The large grazing ranches near Croaghmoyle would relieve a good deal of distress, 46790.—The purchase of land was of immediate importance; for this compulsory powers were indispensable to the Estates Commissioners, 46830, 46847, 46849.

Allotment of Grass Lands.

Grass lands, when acquired compulsorily, should be used to enlarge small holdings, 46821.—And to make new small holdings for small farmers; middle-aged men, in the first place, 46822-6.—Or for farmers' sons of from twenty-one to twenty-five, as this might check emigration, 46740.—Witness was unable to state whether land sufficient to satisfy both small holders and their sons was available, 46828.—If not, the surplus population must emigrate, 46829.—But if land remained after satisfying small holders, it should be given to uneconomic holders from other districts, 46803, 46841-3.—Preference being given to adjacent districts, 46837, 46840.—Sons of tenants should not be considered till all uneconomic holders, irrespective of place of residence, were satisfied, 46842.—But, if land sufficient could be acquired, the sons of farmers should be considered, 46834-7.—The uneconomic holders in that district should have first claim, 46832-4.—The reception of congests from other districts would probably be favourable, 46844.

Migratory Labourers.

The tenants of uneconomic holdings were unable to live on proceeds of their land; they, or their sons, migrated to England or Scotland every year, to obtain the necessaries of life, 46740.—Migration from Balla and Croaghmoyle, 46740, 46780.—Migratory labourers went to England in the spring, some immediately after tilling their own land, and remained away for four or five months; females also went, 46787-8.—Enforced migration was due to the uneconomic nature of the holdings, 46740.—The condition of these harvest men in England was bad; they were obliged to sleep in out-buildings, 46780.—Witness had seen this at Chapeltown, near Sheffield, 46784.—The pay was better in England, and allowed the necessaries of life to be bought, 46785-6.

MELVIN, Mr. MATTHEW J.

See pp. 3-9.

Valuation of Holdings.

The population of Ballina Union was 20,148, 46851.—The area 1,496 acres; the number of holdings valued at or under £4 was 2,242; from £4 to £8 was 1,593; from £8 to £15, 715; from £15 to £20, 219, and over £20, 332; the total valuation of the Union, including the urban area of Ballina, was £45,000, exclusive of fisheries, 46852.—Near Crossmolina the land was one large ranch; one holding was 654 acres, valued at £300; another, near Ballina, 524 acres, valuation £318; another of 170 acres, at £100; a farm of 300 acres, at £144; and there were also farms of 30, 50, 62, 65, 69, and 163 acres, 47057.—The valuation of grazing ranches in Ballina and Crossmolina was all under £1 an acre, 47063.—Some was good land, some inferior, 47064.—Griffith's valuation was used, 47065.—Rent and valuation were nearly equal, 47065.

Land Held by Graziers and Shopkeepers.

Sixty-four graziers held land in Ballina Union, to the amount of 3,816, on the eleven months' system; witness was unable to say whether these figures referred to valuation or acreage, 46854-5.—And twenty-five landlords owned land, mainly grazing, to the value of £5,693, including demesne; the figures concerning landlords and graziers were mutually exclusive, 46855-8.—Some land was held by shopkeepers; 654 acres belonged to a shopkeeper in Belmullet, 47059.

Deterioration of Grazing Land Remedied by Mixed Farming.

Grazing land had deteriorated, 47064, 47066.—If the system of mixed farming were employed, the land would be better, and support more people, 47066-7, 47069, 47072-3.—At any rate, if this were combined with a system of small holdings, 47069-71.—If the Belgium system were adopted Ireland could support eight million persons, 47071.

MELVIN, Mr. MATTHEW J.—*continued.*

REDUCTION OF POPULATION REMEDIED BY DIVISION OF GRASS LANDS.

Population of Ballina had fallen from 24,960, in 1881, to 20,148, in 1901, 46859-60.—Only remedy for this was the dividing of grazing ranches, for the enlargement of holdings, 46859-62.—Uneconomic holders in congested districts should have the first claim on distributed grass lands, 46862-6.—Witness would forward this, but would not resist the giving of grass lands to farmers' sons, if uneconomic holdings were first made economic, 46867-8, 46879, 46900-2, 46918.—Unwise to create new tenancies unless this meant vacated holdings, 46865.—Uneconomic tenants in other parts of the country, and not adjacent to grass lands, should be migrated, 46870.—But witness would not advise bringing of congests to Mayo from Galway, 46873.—Or Leitrim, 46875.—These should be migrated to Roscommon; witness would not object if uneconomic tenants of Mayo first supplied, 46879.

JEALOUSY OF MIGRANTS.

If uneconomic tenants from other districts were migrated into Mayo there would be jealousy, 46880, 46886, 46888.—This would wear off, 46827-8, 46889.—And would yield to representations of influential men, 46899.—There was a prepossession in every locality in favour of the people of the district, 46897.—But there is no more objection to migrants from a different county than to migrants from a remote part of the same county, 46915-6, 46921-3.—Who soon were on good terms with their neighbours; example, migrants to Lacken, 46924-9.—This question unlikely to arise in Mayo, because there was not grass land enough in county to supply its own congested districts, 46873, 46881, 46892-6.—But, in witness's opinion, public authority would be required to arrange distribution of grass lands, 46891, 46904.—Because there was mathematical order in which land should be distributed to sons of tenants and congests from other districts, 46904-7, 46919.

LANDLORDS UNWILLING TO SELL.

Public authority with powers of compulsory purchase also needed, because landlords unwilling to sell, unless compelled, 46946.—Witness had no practical experience of negotiations, but knew by "experience," not hearsay, 46947-51—Landlords demanded twenty-six years' purchase, though they were content before 1903 to take eighteen years; Cranagh Farm an example; it consisted of 111 Irish acres, mostly grazing, given up in 1905; landlord refused it to tenants wishing to enlarge their small holdings, 46951-3.—Of which there was a large number on that and surrounding estate, 46981.

SALE OF TENANTS' INTEREST BY AUCTION.

Landlord refused to sell in first instance, but afterwards got an auctioneer, and proceeded to sell to the highest bidders, 46981.—Divided the estate into tenancies of five to fifteen acres, and put up the "chattel interest" of it by auction, 46952-3.—Tenants' interest was called chattel interest, 46953.—Public opinion prevented sale by auction, 46953, 47002.—But it was sold, by private arrangement, at ten or twelve years' purchase; this was of witness's own knowledge, 46953-5, 47005.—This and one other the only instances of auction of chattel right in the union, 47004.

TENANTS' INTEREST SOLD AT TEN YEARS' PURCHASE.

Ten or twelve years' purchase, a low price, was equivalent to £1 8*s.* per acre, exclusive of taxes; land would be saleable at twenty-three years' purchase, and bonus would make it equal to thirty-five years' purchase, 46956-8.—Tenant right sold by tenant commanded a higher price; this land, though of average quality, was not dear at ten or twelve years, 46958-61.—This ten years' purchase was in the nature of a fine, 46963.—Rent of the land in question was £1 2*s.* per acre, 46962, 46999.—This rent was the basis on which the fine and future instalments were calculated, 47001.—The rent was lower than £1 2*s.* at the time of auction, but afterwards raised to £1 8*s.*, 47002.—The high price and sale at auction showed the determination of landlords to obtain the extreme value of land, 46963, 46991.—Price made at auction was, as a rule, excessive, 46998.—Because of land hunger of tenants, 46994-6.—And he would give any price, or borrow at any rate, to obtain a holding, 46995-7.—Witness objected to sale by auction of tenant-right, because the small holder, a poor man, would not give ten years' purchase, 46982.—Though a rich man would, 46982.—This frustrated the Act of 1903, 46964, 46988, 46991.—Which Act was passed to relieve congestion, 46979.—If landlords found it possible to obtain ten or twelve years' purchase above the proper price of land, auctions would become general, small holders would be unable to enlarge their holdings, and congestion would become stereotyped, 46982-8.—The graziers would still have the land, 46989, 47007.—Public opinion so hostile to auctions that police protection required, 46978.

REFUSAL TO SELL TO CONGESTED DISTRICTS BOARD.

Landlord of Cranagh Farm refused to sell to Congested Districts Board or Estates Commissioners, 46991.—This not of witness's own knowledge, 46993.—Tenants willing to give the same price as the Congested Districts Board, 46966.—Witness was not aware of negotiations between the landlord and Congested Districts Board for the purchase of this land; the Chief Secretary had said in Parliament that negotiations had been in progress, 46967-8.—There was no prospect of these negotiations succeeding, 46975-7.—Witness knew of no instance of a member of the Board being in Ballina Union, though ten districts in the union were scheduled as congested, 46858.—Witness in favour of compulsory powers of purchase, 47008.—There was hardly any voluntary sale in Ballina Union, except of land in Chancery, 47009.—It was necessary to define compulsory powers, 47010.—Prices might be fixed by the Congested Districts Board or the Estates Commissioners, 47013.—At about the same price as voluntary sale, 47013-4, 47037.—Price of voluntary sale, a fair price, 47016.

HOLDING OF WITNESS.

Witness himself had a farm of thirty-one acres—sixteen acres on one estate and fifteen on another, 47050-1.—With a residence on one of them, 47018-20, 47026.—And, in addition, twelve acres adjacent, which was grazing and meadow land, but sometimes tilled, 47022, 47028.—All this, with the exception of the residential land, was untenanted land, according to witness's definition, and might be taken by Government to enlarge small holdings, 47021, 47030.—Of which there are some adjacent, 47031.—Witness would suffer by this arrangement for a time, 47033.—But might as well suffer as his neighbours, 47030, 47032.—Acquisition of witness's holding by Government would be just, if it left him with an economic holding, 47024.—Standard of economic holding depends on the quality of the land and the nearness of markets; ten or twelve acres near Dublin or Belfast would be economic, 46909.—But not less than twenty in Mayo—probably between twenty and thirty acres in Mayo, 46910.—A holding that cannot be worked with a horse is not economic, 46911-12.—Witness could sell his land by auction, but wants compulsory powers; land was in his family for years, 47034.—Witness does not object to selling chattel interest by auction, but to selling grazing land by auction, 47035.

PRICE OF LAND FIXED BY THE STATE.

It was as reasonable for the Government to fix selling price of land as rent of land, 46971.—Though the rent would be subject to readjustment at the end of fifteen years, 46972.—But the question was logically the same, because no man has an absolute property in land, 46973.—This was an old theory, 46974.—Witness thought it for the good of the State, that his land should be taken for the same price he could get at auction, or by private bargain, 47037, 47043.—Or at a less price if he had a grazing ranch, 47041.—This a practical question, 47039.—A hard question, 47038.—Estates Commissioners were competent to fix the price of land compulsorily taken, at the same price as that of a voluntary sale, 47049.—Witness thought

MELVIN, Mr. MATTHEW J.—*continued.*

railways did not give higher price for land compulsorily acquired, 47055.—Witness had had experience of Killala Railway; in a few cases had known prices of compulsory purchase higher than voluntary sale, 47057.

Migratory Labourers.

Labourers in Attymas West and Attymas East, Kilgarvan, Sallymount, and Faugheen went to England annually, as harvest men, 46873, 46943.—1,500 labourers migrate, 1,400 in ten parishes, 46873, 46944.—Migration not greater in the poorer parishes, 46944.—Labourers migrate because of poverty; a proof of this was, they were unable to pay rates, 46944.—Three rate-collectors appointed since the passing of the Local Government Act, and all unable to collect rates, 46944.—When in England these labourers had to sleep in fields, 46945.

Poor Relief.

A district on the slopes of Nephin Mountain rated at £1,200, paid in 1905-6 £115 8*s.* 1*d.* in outdoor relief, 46928-9, 46938.—The same amount was being paid in 1907, 46930.—1905-6 was not an exceptionally bad year, 46938.—This was provisional relief, 46939.—Was given to holders of land, irrespective of valuation, 46939-40.—But holders in the district were poor, chiefly of £2 and £3 valuation; there was not ten men of £15 valuation in the division, 46941.

The "Thirteenth Section."

No special arrangement was made for Mayo in 1905-6; the Thirteenth Section was not put into force; witness was a member of the County Council and of the Board of Guardians for seven years previous to 1907, 46932.—Witness remembered the Thirteenth Section being put into force in three unions of the county—Belmullet, Swinford, and Westport, and under that Section they were allowed to levy a threepenny rate, 46933-4.—The Government contribution was 75 per cent., but the cost over the whole county was £1,700, 46936.—Witness considered this a degrading section, 46934.

CORCORAN, Mr. JOHN.

See pp. 9-15.

Holdings in Killala.

There were 909 holdings in Killala Union under £4 valuation; 534 between £4 and £8; 331 between £8 and £10; 78 between £10 and £15; and 146 over £20, 47078.—There were within the Union of Killala 6,728 acres of land in the hands of landlords, let under the eleven months system; all the land round Killala was waste, 47080, 47260.—There was no population but an occasional herd's man, and a few persons living in the town, 47080, 47261.—The land was not all good; but some was superior, some medium, and some rotten land, 47083, 47087.—The valuation was about 10*s.* per acre, 47085-6.

Landlords in Killala.

2,959 acres were held in the union by Miss S. Pringle, and was superior land, though her 228 acres at Carrowmore, near Ballycastle, and value at £36, was not superior, 47078, 47081-2.—Other landlords were Miss A. G. K. Gore, who held 483 acres, Mrs. B. W. Bourke, who held 1,080; Mr. J. V. Knox, 338; Mrs. P. Knox-Gore, 340; Mr. J. M'Cormick, 197; Mr. G. O. M. Ormsby, 266; Sir R. Palmer, Mrs. Saunders-Knox-Gore, the Earl of Arran, 47078, 47029.—These figures were taken from the return of Mr. Ginnell, and that of the Clerk to the Union, and witness did not think them misleading, 47077, 47079, 47084.—Part of Killala Union is greatly congested, 47140.—But only two divisions are scheduled as congested, of which Lacken North is one; the whole Union should, in the opinion of witness and the Board of Guardians, be scheduled as congested, 47280, 47284, 47290.

Tyrawley.

The Killala District Council embraced the greater part of the Barony of Tyrawley; Ballycastle was the most important centre; the population was about 9,000; the area 165 square miles; the valuation £20,437; more than half the tenant farmers were under £5 valuation; these men had taken up bog, mountain, or marshy bottom lands, and, after reclaiming them, were compelled to pay increased rents, 47087.—This land was acquired thirty years ago, before the Act of 1881, 47089.—The holdings were much improved, and might support tenants in a good year, but in bad times they applied to the Union and the Government, 47089.

CORCORAN, Mr. JOHN—*continued.*

The Thirteenth Section of the Act.

There were then 500 families in Killala Union, 47113.—And, if application were made to Government, the district was asked to put the Thirteenth Section in force; under this section the Government paid £75, and the Union and County Council £25 out of every £100 expended, 47089.—This a fairly liberal arrangement, 47091, 47101.—But the money was not expended to the best advantage, 47109.—And was expended in the employment of men, women, and children, at low wages of 10*d.* or 1*s.* a day, on heavy work, 47089-90.—The system was degrading and demoralising, 47089, 47095.—It was the last shift, 47090.—And only accepted in cases of real necessity, 47101.—If avoidable, should never be employed, 47090.—The people continued to beg from year to year, 47091, 47100, 47107.—Though the Government might improve their position, 47094.—As it had improved the large holdings, and benefited important persons, 47111.—Work should be provided, other than relief-work, 47099, 47102.—No country but Ireland had to apply to Government for relief, 47092.—The money spent on relief works should be applied to drainage, opening up of railways, or some industry, 47111, 47278.

Responsibility of Local Authorities for Unwise Expenditure.

The local authority determined the expenditure of the money, subject to its being used to provide work, 47105-6.—The impression left by the witness on the Commission was that local authorities were to blame for unwise expenditure, 47109.—Witness was of opinion that the high salaries of officials absorbed most of the money, 47109.—The County Council unanimously objected to the working of Section Thirteen, 47110.—Only relief for distress, since industries are non-existent, was division grazing lands for the enlargement of small holdings, 47112-3, 47133, 47136.

Witness's Holdings.

Witness agreed with Mr. Melvin's evidence—agreed on the questions of shopkeepers owning grass lands, 47114-5.—Witness held a twenty-acre field, situated on the Madden Estate, on the eleven months' system, 47116, 47121, 47126, 47145.—Which he had held for twenty years as accommodation land, 47145.—And also a non-residential farm of eighty acres, at Kilfian, on which were two houses made into one, 47118-9, 47117, 47149.—These he would be willing to relinquish if required by the State for the enlargement of small holdings, 47121, 47141, 47146.—Witness had, in fact, offered in Judge Ross's Court to relinquish it, 47134, 47141.—Though he understood tenants of long standing who wished to retain their land, had the preference, 47146.—Witness would be willing to relinquish his holding, because he would prefer to attend to his shop, and believed he would be "fairly handled," 47122.—This expression was meaningless, as applied to grass lands, since he would simply relinquish his tenancy, and no money would pass, 47146, 47148-9.—But he thought an acre, or grass for a cow, should be retained by him, if the land were distributed, 47149-51.

'Fair Price of Land."

Expression "fairly handled" might apply to the non-residential farm, in which he had a tenant-right, 47157.—For this he should expect a "fair price," 47153.—Witness could not indicate by a fair price, but the buyer would know, 47154.—Witness's farms varied as to profits—some years good; some years not so good, 47157, 47171-2.—The profits might be estimated from his books, which he did not keep accurately, 47156, 47158.—If the Estates Commissioners

CORCORAN, Mr. JOHN—*continued.*

should offer him a sum of money producing a less income than he received from the farms he would be satisfied, 47160.—Considering the affair a speculation, 47160.—Because he would not complain of a price fixed by Act of Parliament, 47161-2.—Even if he did not consider the price "fair," 47169.—Witness would estimate his profits from the farm on a ten years' average, 47173.—And would be content with a price producing this income, less twenty or twenty-five per cent., which might be considered as representing risk and wages of management, 47174-6.—He believed the Estates Commissioners would give a price representing the value of the land, though they would not be guided by him, 47164-5.—The value of the farm to him was the amount of money it brought in, 46167-8.—The farm was a secondary source of income, 47179.—And higgling about the farm might injure the shop, 47180.

Witness would ask more if the Farm were his Sole Livelihood.

But if witness depended entirely upon the farm he would not be content with a price returning twenty or twenty-five per cent. less than his income from the farm, 47181.—Witness was of opinion that it was unfair to dispossess tenants residing on, and living out of, their land, 47182.—But land held on the eleven months' system should be acquired by Government, for the relief of small holders, 47188.—And the eleven months man should be eliminated, 47190.

Non-Residential Holders to be More Leniently Dealt with than Eleven Months Men.

The non-residential man was in a different category, having a bigger interest in the land, 47193.—As much as the landlord, 47170.—But, if the division of the large ranches did not provide sufficient land for the congests, the non-residential holdings, in addition, should be compulsorily acquired, 47194, 47201-2.—The non-residential holder was less wealthy than the landlord, 47194, 47198.—And less able to survive compulsory deprivation, 47198.—Witness thought that the processes of acquiring grazing lands and non-residential holdings should not proceed side by side, because the two classes were distinct, 47196.—But, if the ranches in Killala Union were parcelled out, there would be land enough for enlarging of small holdings, or provision of new holdings for congests in Kilcummin, Rathlacken, and along the coast to Balderrig, and also for sons of tenants, who now emigrated, 47204, 47205.—There was no industry to retain them in Ireland, 47204.—Nearly all farmers in the union had some friend in America who assisted him with money, without this they could not pay their way; witness himself cashed £700 or £800 every Christmas for his customers, and the post office cashed large sums, enabling farmers to pay their rates, taxes, and other debts, 47024.—Witness did not say "Mayo for Mayo," but would speak first on behalf of his own county, though anxious for the welfare of all Ireland, 47206-8.—Not "First for myself, next for the town, next for the union," 47209.

Conditions of Life in Lacken.

No engineering works are done in Lacken, but £50 was given as relief, 47282.—The people are working well, but £50 is a small sum, 47284.—And the expenditure is limited to that part of the union, 47284.—There were eighty or ninety houses in Rafftay, 47285.—Lacken has a good harbour, and a fairly good pier; its inhabitants are half farmers and half fishermen; the County Council endeavours to put things in repair, 47286.—Houses are occasionally improved, and cattle and pigs removed, 47282.—There were sometimes ten or twelve persons living in the same house; outbuildings were necessary; Father Conway was doing his best to make the relief scheme workable, 47290.—Properties had been purchased at Belderig and Derry (at Mrs. M'Donagh's); there are no grants, but the property is maintained by the local authority, which builds houses, engages engineers, and makes roads into the village, 47288.—Witness would like to see these operations extended, 47289.—There was no Parish Committee at Belderrig, 47291.—The number of officials in Killala Union is fifteen, 47292.

CORCORAN, Mr. JOHN—*continued.*

Character of the Western Peasantry.

The peasantry of the West of Ireland were not too lazy to work, if they had the facilities of farmers in other parts of Ireland—good land, large buildings, and low rents—there would be no distress, even now; the gift of more land would rehabilitate the peasant of the West, 47209.

Price of Land.—Number of Years' Purchase Demanded.

But landlords are unwilling to sell land to tenants; few landlords in Killala Union have sold to tenants, the largest landlords hold out for exorbitant prices, 47209-10.—They acquired their land after Oliver Cromwell's war in Ireland, and now ask twenty-four to twenty-six years' purchase for second judicial tenancies, together with a bonus of three to five years; witness would not recommend anyone to give more than eighteen years' purchase for second judicial tenancies, in view of the climatic changes in Ireland, and the probability of the importation of Canadian and Argentine cattle, 47210.—Sir Roger Palmer's tenants made offers he would not accept, other landlords demanded 24½ years' purchase; this witness considered exorbitant, 47212.—Taking into account that before the passing of the Act of 1903, they were willing to sell at eighteen or twenty years' purchase, under the Ashbourne Act, 47217, 47216.—And now refuse good offers from tenants, 47216.—Mr. Pratt, before the 1903 Act was passed, offered to sell his land for eighteen years' purchase, and after 1903 Act came into operation he sold it at 24¼ years' purchase, this was a case in point, 47219-20.—Witness, acquainted with agrarian history, recognised the difference in position of landlords before and after the Act of 1903, 47217-8.—Witness is not aware whether landlords were solvent or not, but understood that some, being insolvent, still refused to sell, 47218.—Under the Act of 1903, though the same annuity is paid for 68½ years, instead of 49, which is a great difference, 47223-4.—Witness considered that the price of land had risen since 1903, whether that was the object of the Act or no, landlords were now looking for a greater number of years' purchase, instead of meeting their tenants half-way, 47225-6; tenants in witness's district had made fairly good offers, which were refused, 47225-6.—Witness would not consider landlords demanded exorbitant prices for land, if sum demanded, if invested at three and a-half per cent. would not exceed previous income from land; witness had based his opinion on number of years' purchase, 47229.

Department of Agriculture conferred no benefits on Killala.—Use of Spraying Machines.

The Union of Killala had derived no benefits from the Department of Agriculture and Technical Instruction, the suggestion of a County Committee are ignored by them, 47229, 47236.—The County Committee asked some years ago for the supply of spraying machines to the congested or poor districts of the Union; this the Committee refused, though they had ample funds for the purpose, 47229.—Notice was given to the Department in 1907 of the appearance of potato blight, and though in answer to a question in Parliament by Mr. Flynn, the Vice-President replied that means were being taken to combat it, no action was taken in the Union, 47229.—Mr. Russell stated that thousands of leaflets had been sent out, but, to witness's knowledge, no leaflets were received in Killala, 47229.—It was stated also that large posters were affixed to police barracks, and that men had been sent out to give instructions in spraying, and to repair machines; also that machines would be sold at 27*s.* 6*d.* (cost price), and sulphate of copper at 36 per cent. (cost price); no machines were received in Killala, 47229, 47277.—Though witness believed they had been asked for immediately the blight appeared; the Union had passed a resolution to apply, 47267-70.—An official reply was sent by the Department, witness could not say whether it was a promise to send spraying material, but, if so, the material would now be useless, 47271-3.—When it was pointed out to witness that a great quantity of spraying material was sent to Belmullet, he replied that an official from the Department required guarantees before supplying the material, 47229, 47274.—Which

CORCORAN, Mr. JOHN—*continued.*

few people were able to pay, 47274.—The people understood the use of the spraying machines, 47229.—And every farmer in the Union used them, 47235.—Though farmers of under £4 valuation were unable to obtain machines, 47235.—And in districts where the people are very poor, the absence of spraying was a great loss to them, 47229.

Spraying Machines supplied by Shopkeepers.

Shopkeepers in the Union lent machines on hire, and others sold machines and materials, 47230.—The machines were lent out at a shilling a day, or a shilling for a small field of potatoes, 47231-2.—It might be possible to let them at a shilling for two days; local shopkeepers have sold sulphate of copper at 35*s.* per ton, as cheaply as the Department, 47230, 47277.—Witness had bought it from the United Alkali Company, 47230.—Shopkeepers had to wait a long time for their money, 47230, 47277.—Witness did not say that the Department should compete with shopkeepers, but that, considering their boasted philanthropy, they should do something for the poor, 47234.—It was better that the machines should be locally supplied, 47237.—The Department imported people from England and Scotland, who considered the English rather than Ireland, 47237.—While the local people, who knew the district, 47237.—And paid a penny rate, 47234, 47237.—Obtained no results for their money and suggestions, 47229, 47234, 47236, 47250, 47278.—Witness had never seen an official of the Department in the district, 47249, 47277.

Refusal to Strike a Rate.

The Union might refuse to strike a rate, but those who receive benefits in their own districts would oppose this, 47239.—And the majority of the Council considered that they had had good value for their penny, 47240-1.—Some years ago the Council had refused to strike a rate, and an influential deputation of persons who were receiving benefits, had begged them to revoke it, 47242.

Districts in Mayo benefited by the Department.

Witness considered that the part of Mayo about Westport received the principal benefit, where they received a grant for training or convent schools.—Witness was aware that Ballaghadereen and Claremorris received grants, 47243-7.—Ballaghadereen was not in the administrative county, 47247.

Premium Bulls and Boars in Killala Union.

Clegg Royson was not a premium bull, but the property of Dr. Macaulay, 47256.—There was a premium bull at Drumroe, and one at Ballycastle, 47258-9.—Mullavany, where there was a premium bull, was not in Killala; there were nine nominations about Killala, 47257.—Mr. Thomas Dillon had a premium boar at Rafftay—it was easy enough to give a boar, but a poor man could not get a boar without giving £2, 47264.—Witness did not consider he was inconsistent in making these statements, and saying also that the Department had done nothing for the Killala neighbourhood, 47265.—Nor did he wish to withdraw his statement about the Department, 47267.—Which many persons would confirm, 47265.

Egg Station.

Mrs. Dillon had an egg station, but witness considered it useless, 47266.

High Salaries in the Department.

All the Department's activities were equally useless, and the funds were squandered in high official salaries, 47278.—There were several important fishing stations in the Union, but from want of proper harbours and piers, and neglect of ancient substitutes for piers, fishermen could only go to sea in fine weather; the fishermen's boats (many of them canvas curraghs) were unsuitable. and when the fishermen got a good haul, they had to sell it locally, and could not send such fish as turbot and salmon to the proper markets, for lack of railway facilities, and therefore only obtained a half or a third of the price they would command in London or Dublin, 47278, 47286.

CORCORAN, Mr. JOHN—*continued.*

A Coast Railway Needed.

A coast railway would serve the whole Union of Killala, and would develop and improve the country, producing better prices, more prosperous fairs and markets, and allowing the mineral and flag quarries to be worked to advantage, 47278.—Witness was in favour of the Blacksod Railway scheme—if the Blacksod, Collooney, and Belmullet scheme could be carried out soon, the peasantry suffering from the failure of the potato crop would obtain employment and keep themselves and their families till better times.—Witness wished the Government to establish the All Red line to Canada, 47279.

Land held by Shopkeepers as an Investment.

Shopkeepers acquired land as an investment, because there were so few suitable investments in Ireland, 47117.—If the country were more prosperous shopkeepers would not need to hold land, 47121.—In small, backward country towns, shopkeepers were entirely occupied with their business, but this depends on their business methods, 47122.—They buy land instead of gambling on the Stock Exchange, 47117.—If the county were more prosperous they would not necessarily buy the tenants' holdings, but would have more money to invest, and do more business, instead of farming, and could employ their surplus wealth in some other form of investment, 47117.

KELLY, Rev. JOHN.

See pp. 15-9.

Congested Districts Board did Good.—Proposed New Members.

Agreed generally with preceding witnesses, 47294.—The Congested Districts Board was doing good, more than the Department of Agriculture and Technical Instruction, but it would be more useful if two or three new members were added to it, appointed or nominated by the County Councils of counties at present unrepresented on the Board, 47294.—Donegal was already represented by Dr. O'Donnell, and Mayo, by Father Denis O'Hara—other counties might complain of not being represented, 47295.—Witness would not necessarily limit the number to three or four, 47296.—Men with local knowledge were useful, 47296.

Increase of Board's Powers.

The Congested Districts Board should have charge of the purchase of land in Connaught, and in the congested counties of Donegal, Kerry and Cork, unless on any estate the tenants were prepared to purchase direct, or through the Estates Commissioners, and should have discretionary power to schedule as congested, any electoral division, or part of a division, in the congested counties, 47296.—Present definition of congestion was arbitrary and unjust, as the presence of three or four large demenses in a poor division would prevent the division from being scheduled as congested, 47296.—The Congested Districts Board should have more money for the purchase of land; for grants to rival banks, to parish schemes, and such like, 47297.—Compulsory powers were needed in some cases, where landlords refuse to sell at all, or refuse to sell at fair prices, 47308.

Migration.

The most urgent duty of the Board was to relieve congestion by migrating uneconomic tenants to grass lands, 47297.—This could not be done where no grass lands existed, but there is available grass land in Mayo, and where no grass land exists, the uneconomic tenant should be migrated to another county, 47298, 47303.—To the nearest available land, 47300 47303.—Though in Mayo, the congests of Mayo should have the first claim, 47301.—The matter should be considered as part of a broad national policy, 47302, 47305.—For if migration were confined within county boundaries, it would be impossible in counties without grass lands, 47305.—And admitting sons of tenants to new tenancies would exclude migration in many counties, while migration is the best way for congestion—

KELLY, Rev. JOHN—*continued.*

sons of tenants should have land only after congested persons were satisfied, and by this means some deserving young men might be saved from emigration, 47306.—Public men, both clergy and representative men, and the general public, would be willing to assist a public authority, such as the Congested Districts Board, in migrating uneconomic tenants, 47304, 47307.—There would be a general disposition to act reasonably, 47304.—Though some selfish persons might be unwilling to assist, 47307.—And the majority would be strong enough to get their view adopted, 47308.—Without any great conflict, 47307-8.

"Fair Price" was Difficult to Fix.

It was not easy to agree on a fair standard of price, 47309.—But a landlord compelled to sell should not be left worse off than before, 47310.—Though he might reasonably be offered somewhat less than his net income, owing to the greater security of his income after sale, than when it was dependent on land, 47311.—Which is uncertain, owing to the possible effect on the value of grass land, of possible importation of Canadian cattle, 47312.—There were hypothetical difficulties, but likely to arise, 47312.—And since the purchaser chose his time for buying, 47313.—A limit must be set to the consideration of future contingencies, 47314.—And the value of land is most fairly estimated by considering the returns from it on a five, ten, or fifteen years' average, 47314.—Private interests must not be injured, even for the public good, 47314.

Landlords unwilling to Sell at a Fair Price.

Witness believed that landlords would refuse to sell at a fair price, for to his own knowledge landlords had refused, in answer to a deputation of tenants, refused to consider the question, one refusing even to reply, or to acknowledge the request, 47315.—Power of compulsory purchase were more needed in the case of grass lands than of tenanted land, 47317-8.

Higher Prices demanded for Grass Land than for Untenanted Land.

The price asked for grass lands by landlords would be higher; one landlord, a reasonable man, demanded twenty-seven years' purchase, plus the bonus, of a deputation of tenants, accompanied by witness, though he had previously offered it at eighteen years' purchase, and nothing had occurred in the interval to enhance the value of the land, 47319.—Witness would only resort to compulsion when the landlord, offered by a Government Department, the Estates Commissioners, or the Congested Districts Board, a price that would leave him no worse off than at present, should refuse to consider the bargain, 47319.

Little Land sold in Mayo.

Comparatively little land had been sold in Mayo, owing to the high prices asked by the landlords, together with the possibility that Canadian cattle would be imported, and the prevalent storms, which in July and August were destructive to crops, more so, even, than the potato blight, 47319.

Selection of Migrants and position of Tenants Remaining.

Witness considered that the migrants selected from a district should be the active, young, strong, and energetic men, 47320.—With promising families, those likely to do well, and make a good living, 47319-21, 47323.—Because old men do not like to be removed from their surroundings, 47319.—This would not leave the congested districts in a worse position than before, 47324.—Those left behind would only be unfit in the matter of age, 47325.—And would do better when they had more land, 47325.—The family might be weak at the time of migration, but likely to grow up and do well, the migrating tenant would be succeeded by his son, or his daughter's husband, 47326-7.—It would be wise to migrate five or six people from the same district, that they might be less lonely in their new homes, since their associations would remain the same, it would make little difference whether they came from the same or adjoining townlands, 47321-2.

KELLY, Rev. JOHN—*continued.*

Substantial Men as Migrants.

Migration was carried out at a cost to the State, which should reap equivalent, or at any rate some advantage, and in migrating tenants, must consider the quantity of land he leaves to be divided, but in Mayo there were no large farmers who were likely to be removed, and the plan was impracticable in Mayo, 47332-3.—However, the removal of substantial farmers is the best policy, and had been kept in view by the Board when arranging migration, 47331, 47332-3.

Inducements to Migration.

A substantial farmer would expect large compensation for removal, 47336.—Which would seldom be in money, 47337.—But in the obtaining of a better holding, 47335.—It was wise to offer a prosperous man considerable inducements to migrate, 47336.—The migrating tenant would relinquish the tenant-right of the holding he vacates, 47340.—And acquire the tenant-right, as well as the landlord right, of the new holding, 47341.—And would be in a good position, if the money demanded as payment for his new house and fences, were not unreasonably high, and did not unduly increase the annuity he paid for the new holding, 47341-3.—He could do as he chose about accepting the terms, 47344.—And his successor in his original holding, should pay him a sum agreed upon by the Congested Districts Board, or a similar body, as compensation, 47336-8.—This sum, the migrant might use to buy stock, 47338.

Loans to Congests who had received additional Land.

The congest, who received part of the migrant's land, should pay a sum (to be fixed by the Congseted Districts Board, 47345), for the tenant right of the land added to his holding, 47345-6.—Which sum should go to the State, to recoup it for the expense of migrating the original owner of the land, 47346.—This would much decrease the expenses, 47336.—The congested tenant, if unable to pay compensatoin to his predecessor, and a sum for the tenant-right of his newly-acquired land, should be able to obtain a loan at a low rate of interest, or to have his annuity increased, to cover losses largely, 47339, 47346.

Government should undertake Arterial Drainage and encourage Tenants to Drain Holdings.

A system of drainage was the most urgent need of the district, after the relief of congestion, arterial drainage should be first considered, and the Congested Districts Board, or a similar body, should have power, when purchasing lands, to have them drained, 47346.—And to drain waste lands, 47356.—If the Board were to widen and deepen rivers, and provide arterial drainage, it would be possible for tenants to drain their own lands into the rivers, and they should be advised, or exhorted to do so, 47346.—There being no power at present to compel them to do so, 47350.—There was no more urgent need in Ireland than drainage, and no more profitable manner of spending money, 47347.—For the land was only producing half its possible return, for want of drainage, 47346.—And the land was in some cases lying under water at the time when seed should have been sown, and consequently produced no crop, 47346.

Necessity of a Central Board of Drainage.

A drainage scheme would be better undertaken by a Central Board, 47355-6.—And the details should be delegated to the County Councils, 47355.—Or a Board might, in its own county, carry out the scheme under the central authority, 47353.—Local bodies should operate in their own districts, 47355.—And would carry out the work efficiently, 47353.—But are not suitable for making a scheme, since adjoining counties might not agree as to the scheme, 47354.

Maintenance of Drainage Works.

The drainage works should be maintained (1) by a cess or levy on the district; (2) the money necessary to keep the rivers open should be provided by an assessment on holders of land benefited by drainage.

KELLY, Rev. JOHN—*continued.*

in proportion to their valuation, in perpetuity, 47348-9.—Any scheme for arterial drainage must also depend on the contributions of the local authority, which should have ample legal powers enabling them to undertake the work, 47351-2.

TREE-PLANTING ON WASTE LANDS.

The Congested Districts Board had also done good by tree-planting—the country was deficient in timber, and existing timber was constantly felled, leaving the country increasingly bare, 47356.—If the Congested Districts Board had power to plant waste hillsides, it would provide employment and improve the district, 47356.—Where there was much land, not even used for grazing, except a small number of miserable sheep, not worth a 1*s.* per acre, but capable of being made profitable by planting, 47358-9—Tree-planting on a large scale must be undertaken by Government, 47384.

TREE-PLANTING BY LANDHOLDERS.

Proprietors of lands should be encouraged by the Congested Districts Board to plant trees round their houses, for the shelter of cattle, 47359.—The majority of landholders would consent to do this, 47360.—And (despite the experience of the nuns of Foxford, who had distributed 12,000 trees, and found that the people refused to plant belts of trees, but insisted on planting in rows, for the purpose of saving land), witness believed that a majority might be induced by the influence of public men and public bodies, to plant belts of trees instead of rows, if they had more than a small quantity of land, 47361.—Witness was not aware that a belt of trees less than seventy yards wide was useless as a shelter belt, 47362.—Trees grew splendidly at Dr. Pratt's place, and even trees not planted in belts, 47364.—Even single trees would grow, 47365.—As on witness's own land, 47366.

REASONS WHY COUNTY COUNCIL NOT SUCCESSFUL IN TREE-PLANTING.

The Congested Districts Board was the most suitable body for encouraging tree-planting, the County Council Committee, of which witness was a member, was not succeeding in this work, 47366.—The Parish Committees might do some good, if they were provided with funds for the purpose, 47367.—But it was all a question of obtaining the requisite funds, 47369, 47374.—The Agricultural Committee of the County Council could only undertake tree-planting at the expense of more important work, 47370.—Since they could only raise a rate of ½*d.* in the £, for agricultural instruction, and 1*d.* for technical instruction, being limited to 1*d.* in the £ for the two, and having no power (to witness's knowledge), to raise a ½*d.* rate for tree-planting, 47376-8.—At any rate, the sum available was so small as to be inconsiderable, 47379.—The County Committee, moreover, operated over the whole country, whereas it was essential that efforts to encourage tree-planting should be concentrated in smaller areas, 47369, 47373.—The Parish Committee would have more knowledge and show more interest in the matter, than the County Committee, 47373.

INSTRUCTION IN TREE-PLANTING AND GRANTS OF TREES.

The Congested Districts Board might buy trees by the gross and sell them cheaply, thus encouraging planting, 47380-1.—And should give instruction in planting, 47381.—Since the people had little knowledge of how to plant trees, 47369.—Instruction is now given for the County Committee by Mr. Gordon, who is doing good work in instruction as to tree-planting, given to those in his district who apply for it, and making second visits to inspect results, 47369.—Parish Committees might encourage planting by offering a grant, 47375, 47385-6.—Tree-planting might be done by the Congested Districts Board, before handing over land to tenants, but this would probably be dearer than if the tenant did the planting himself, 47383.—If a certain proportion of trees were granted to them, they would comply with necessary conditions, such as fencing the belts of trees, 47382, 47387.—And would prevent trespassing, 47388.

KELLY, Rev. JOHN—*continued.*

LOANS FOR IMPROVEMENTS WOULD PREVENT MIGRATION.

If the tenants could obtain loans from the Congested Districts Board for the improvement of their holdings, they would be able to live without going to England as harvest-men, which was an uneconomic proceeding in the long run, as they left their land and crops untended, except by their wives, and by children who ought to be at school; if they could get loans on the security of their holdings, the repayment of which could be spread out over many years, they could do valuable reclamation work, which would more than repay them for the loss of the higher direct earnings in England, 47388.

INDUSTRIES NON-EXISTENT.

If anything could be done to establish industries, it would be an advantage to the district, which now had none, 47388-9.

LACK OF TRANSIT FACILITIES INJURE THE CATTLE TRADE.

Transit facilities were insufficient in Ballina Union, there was no railway nearer to Belmullet than Ballina—the inhabitants hope for a branch line to Belmullet, 47389.—This would enable farmers to obtain a better price for their cattle, 47389.—Witness (who had lived in Sligo) would be surprised to hear that cattle prices in Belmullet compared favourably with those in Sligo, 47390.—And he was sure, from hearsay knowledge, that people in his district would get prices for their produce equal to those obtained in Ballina, which was distant forty English miles, 47391.—If the Midland Great Western people said that this was probably or actually true, it was because they were personally interested, 47392.—And if their opponents did not deny the statement, it was because they did not think it necessary, for it is absurd to state that cattle can be driven forty miles from Belmullet to Ballina, without suffering deterioration, 47393.—Cattle were not less injured by being driven forty miles than by forty miles rail, 47394.—And people who bought cattle at Belmullet took them to Meath by rail, rather than road, 47396.—It was agreed that pigs were deteriorated by travelling by road, 47393-5.

CONGESTION IN ADRIGOOL.—VALUATION OF HOLDINGS.

Adrigool, where witness resided, was a congested neighbourhood, particularly in the three divisions situate in the Castlebar and Westport Unions, in these divisions the majority of the holdings were under £5 valuation, a few were between £5 and £10, and not more than twelve or thirteen holdings were over £15 valuation. The land was wet land and moorland, or bare and rocky, all poor, but capable of reclamation, if encouragement and capital were to be had, 47396.—There were grass lands in the Crossmolina South divisions (to which these congests might be removed) of a valuation of £1,049, and amounting to 2,000 acres, excluding demesne, which were held by landlords and graziers, 47396-7.—And two of these had valuations of £302 and £242 respectively, 47397.—And in North Crossmolina, there were seven persons owning 2,563 acres, of a gross value of £890, 47397.—These lands should be bought by the State and distributed to congests, at a reasonable price, 47397.

SAUNDERS-KNOX-GORE, Colonel W. A. G.

See pp. 20-6.

CONGESTED DISTRICTS BOARD.—PROPOSED ALTERATIONS IN ITS CONSTITUTION AND POWERS.

Witness proposed that by a change in the constitution of the Congested Districts Board, powers should be given to it, as to the Estates Commissioners, to act from day to day, 47398.—To prevent the delay, which (witness was informed) now arose from waiting from meetings, 47399.—Witness did not consider the difficulty would be well met by the appointment of paid Commissioners, since Ireland was overdone with paid officials, 47400-1.—And thought the work could be done by committees of the Board, 47400.—Paid officials might be used as members of the Board, 47402.

SAUNDERS-KNOX-GORE, Colonel W. A. G.—*continued.*

—Witness would be satisfied if the Board continued to meet at intervals, paying officials to carry out its instructions in the intervals; these paid officials to have larger powers than the present officers of the Board, 47403.—The Board should be maintained as an independent body, apart from the Estates Commissioners, 47403.—The Board should be more representative of classes and districts than at present, 47566-7. —There being too few persons on it at present, and very few from Connaught—the Board should have power to buy land outside congested districts, for the purposes of settling poor tenants, also from non-congested districts, 47566.—As at present land was purchased for the benefit of persons from congested districts, while the equally poor in non-congested districts could not be assisted, 47569, 47570.—This should only apply to small tenants on the fringe of congested areas, 47571.—Congested areas should be scheduled by townlands, rather than by any other unit, 47566.—A resident agricultural instructor should be appointed in every district, with control of a fair-sized farm, 47567.

Sporting Rights.

The Congested Districts Board or Estates Commissioners should take precautions to preserve sporting rights on estates sold to them, and to apply the income from these to the relief of annuities payable by tenants on such estates, 47567.—No money was now advanced by Government in respect of sporting rights, 47568.

Turbary Bog.

The Estates Commissioners or Congested Districts Board should take upon themselves the functions of striping and mapping turbary bog, upon estates which have been sold direct to the tenants, and witness also suggested that a fair price should be paid for turbary, estimated upon its value for fuel, 47569.

Compulsory Purchase unnecessary.

There was a large quantity of grass land in Mayo, which owners were willing to sell, either to the Estates Commissioners or to the Congested Districts Board, simultaneously with their tenanted lands, 47403, 47420.—At a fair price, and therefore compulsory powers were unnecessary, and were only demanded in order to enable purchasers to obtain lands at prices unfair to the owners, 47403-4.—Compulsory powers were not needed in dealing with unreasonable landlords refusing to sell land necessary to be acquired, as equally good land might be obtained from other owners, 47408, 47410.—The unreasonable landlord would probably sell if he could obtain a fair price, 47405, 47418-9.—And in exceptional cases, where the landlord is obstinately unreasonable, compulsory powers might be resorted to, 47407, 47419.—As a last resort, 47416.—If the necessity is clearly shown, 47407, 47415.—And where compulsory powers were used, the owner should be treated in the manner adopted by railways, 47406, 47413, 47411.—And offered compensation on a liberal scale, 47412-3.

Undesirability of distributing Grass Lands.

Witness did not think the division of grass lands would benefit the country and the small proprietors, 47420, 47432, 47435.—It would destroy the great grazing industry, 47420.—Which was comparatively unaffected by the changeable climate, 47430, 47439.—And was a great advantage to the smaller tenant, in providing a market for his stores, 47420.—There was not at present too large a quantity of land in Ireland under grass, 47438.—Though some land would not stand continuous grazing, 47436.—And it was desirable that small holdings should be enlarged, 47437.—But if the land would pay better under tillage than grass, the owners would till it, knowing their own business best, 47438, 47440.—Some of the grass land was unsuitable for tillage, 47420, 47431.—Though this was only a small proportion, 47433-4.—And some of the remainder might not pay for breaking up, 47433.—It was easier for a large grazier to succeed than for a small one, 47426-7.—And witness could not say that a man with a forty-acre holding, who failed at grazing, would

SAUNDERS-KNOX-GORE, Colonel W. A. G.—*continued.*

make a profit at mixed farming, 47428-9.—As some land was suitable, and some unsuitable for tillage, 47431.—The system for giving agricultural instruction to farmers was not good, but of late it had been undertaken by the County Councils and the Congested Districts Board, 47441.

Attitude of Witness.

Witness was not an agricultural expert, and would give no opinion as to whether the present system was the best possible, 47443-6.—He knew little about mixed farming in Ulster, 47447.—The Belgian system might be unsuited to the Irish climate—however, if the breaking up of grass land were approved, owners in Mayo would sell grazing and tenanted lands at a fair price, 47420.

Fair Price of Land.

A "fair price" was such a sum as, when invested in securities at 3½ per cent., will bring in to the seller his net income from the land, 47421-47448.—Meaning the net income after deducting agency expenses, and, in the case of grazing land, also taxes, 47420-3.—The net income should be calculated over a term of fifteen or twenty years—this income could be best ascertained by reference to the books of the property, 47449.

Landlords willing to offer Books for Inspection.

Witness considered that the landlords would be glad to offer their books for inspection in the case of a *bona fide* offer of a "fair price," 47450, 47453-4, 47457-8.—That is, if the authority had the power to give a "fair price," 47455.—Witness had not known a case of books being refused in view of a fair offer, 47452.—It would not be sufficient that the Estates Commissioners or Congested Districts Board should approach the owner, an offer being presumed, 47456. —The private affairs of landlords should not be made public, 47456.

Tenanted and Untenanted Land Sold Simultaneously.

Witness, in his statement that landlords would produce their books in view of a fair offer, and be willing to sell land at a fair price, was contemplating the simultaneous sale of tenanted and untenanted land, 47403, 47458, 47461.—And if the proposed sale was of tenanted land alone, his answer was the same, 47459-60, 47462-4.—This was not said on the authority of the Landlords' Convention, but witness's opinion as to landlords of his acquaintance, 47464.—And in his opinion, when landlords refused to sell, it was on account of the insufficiency of the offer, 47464. —Witness considered if untenanted land were sold separately it should command a higher price, since a dual interest, both as owner and occupier, should be paid for, 47464.—A "fair price" is difficult to fix, which would work well under the varying circumstances of different estates and districts; Mr. Doran's method was fair in principle, but in practice has been unfair to the landlords, 47464.

Mr. Doran's method of estimating Price of Grass Land.

Mr. Doran's principle was to estimate the fair rent of an area of grass land, and then to give the landlord 27 years' purchase on this estimate, 47464, 47489-90.—The 27 years was not a fixed term but an average, 47490.—And Doran suggested no fixed term in case of compulsion, 47492.—This was unfair to landlords, since the estimated fair rent might be insufficient, and was substantially below the net letting value of grass land, 47464.

Mr. Doran's estimate of Value of Tenanted Land.

Though the Congested Districts Board had done good, Mr. Doran had not given sufficient weight to the reasons for compensating the landlord upon his net income instead of upon his estimated fair rent; judging by Mr. Doran's evidence, it would appear that the average price paid since 1903 for first term and yearly tenancies was 18½ years' purchase, and for second term tenancies 21 years' purchase, whereas

SAUNDERS-KNOX-GORE, Colonel W. A. G.—*continued.*

these figures covered the arrears of debt due to the landlord at the date of the sale, 47499.—This was under the voluntary system, 47500.—Mr. Doran gave three periods: prior to 1896, from 1896 to 1903, and since 1903, and in each period there was an increase on the average price paid, 47501-2.

Rent as Evidence of Value of Grass Lands.

If for fifteen or twenty years a particular rent had been paid for a grass farm, this was evidence of its letting value, 47488, 47519.—And afforded evidence that the landlord should be compensated on the basis of net income, rather than on a theoretical income, prophesied by the Estates Commissioners, 47488.

Compensation of Owners relinquishing Grazing Lands.

Owners, on giving up their grazing lands which were needed for congests, acted virtually under compulsion, and should receive the full value of their property, and in addition 10 or 20 per cent. as compensation, 47464.—This compensation, though not actually legal, was now customary, in respect of owners selling under compulsion, 47464-5.—And though witness did not actually ask for it, he pointed out that Irish landlords were asked to take less than was customary elsewhere, 47468, 47474.—Under the Lands Clauses Act this compensation was 10 per cent., and in the case of railways 20 per cent., 47466.—And though in this case there was no severance, compensation was necessary as the sale was compulsory, 47467.—Though formally the compulsion only amounted to exigency, 47464.

Irish Land a good security.

Irish land was not so bad a security that to part with it without compensation, while retaining the same income, was a benefit, 47478, 47492.—On the contrary, it was a good security, as was shown by the regular payment of rents, 47470-2.—On most estates in Mayo, tenanted and untenanted land, a year's rent had been paid within the year, and this for the last twenty-one years, 47492.—Witness knew little of English rents, and did not state (in answer to questions) whether he would consider an estate in the West of Ireland an equivalent to one in England bringing in the same income, 47472-3.

Questions relevant to the Valuation of Grass Land.

He saw the point of the questioners in suggesting that the weather was uncertain in that locality, and that renewed agrarian trouble might injure landholders, 47474A-5.—But witness saw no reason why the landlord should not therefore receive his net income, with full security for the future, 47475, 47487.—Nor should speculative considerations, such as the possibility of the importation of Canadian cattle, causing injury to grazing lands, be taken into account when considering the price to be given for grass land, 47477, 47481, 47487.—The fall in gilt-edged securities may continue, and the capital value of landed property be depreciated, though the income remains the same; and again the price of land may rise, in consequence possibly of the adoption of fair trade, 47481.—Rents have been paid regularly, and though they may be reduced, securities also may decline in value, 47484.—Witness could not say why Irish Land Stock was depreciated, it was Government Stock, 47480.—And had nothing to do with the value of Irish land; the ultimate security of Irish Land Stock is the State, 47485-6.—These considerations would not affect the sale of stocks and shares, 47478.

Rents of small Holdings not paid from produce of the Holding.

Witness, though taking payment of rent as an indication of the value of land, could not state that rents were always paid from the proceeds of the holding itself, in the case of small holdings, 47496.—Sometimes that was impossible, 47498.—As in the case of uneconomic holders who went to England as harvestmen, 47494, 47497.—But in the majority of cases it was so paid, 47498.—And witness knew nothing of payment by means of money from America, 49494.—If this were so, it was possible that the security for payment of rent in the future was not based upon the value of the land, 47499.—But the demand for grass land in Mayo was improving, and the grass rents had been maintained in Mayo for many years, 47488.—Yet Mayo was not rack-rented, since the reduction of rents in the country averaged less than any but two or three counties, 47499.

Father O'Hara's method of valuation.

Father O'Hara had suggested that a landlord in Connaught should receive 20 per cent. bonus upon the price of his estate, or a sum which when invested at 4 per cent. should bring him in his net income.—If these suggestions were carried out together, the great majority of Mayo owners would be willing to sell their tenanted and untenanted lands together, except their demesne and purely home farms; witness believed this, as the 4 per cent. with the bonus would be nearly equal to the 3½ per cent. in the other case, 47488.—It was evident from the prices realised at the sale of small holdings that the tenants' interest in these was worth from ten to twenty years' purchase; the value of the tenants' interest makes the rent secure, and the Treasury acquired the security of both landlord's and tenant's interest when advancing purchase money, 47499.

Valuation of Grass Lands on the basis of Poor Law Valuation.

It had been suggested that the poor law valuation plus one-third thereof, should be taken as a minimum basis of compensation in the case of grass lands, 47528.—But this would be a false basis, as the valuation was completed in 1857, since when prices had risen and many improvements had been made by landlords, 47528.—The prices of produce and cattle were enhanced since the passing of the Act of 1881, 47530.—This the witness had from a return issued by the Land Commission, 47529.—Ranging from 1886 to 1905—but the Commission had a report stating that prior to 1880, prices were higher than in 1905, 47530, 47533, 47533A.—Witness was of opinion that the cost of labour had not increased since 1880, 47531.—For though the wages of labouring men had increased, 47533.—Much labour was done on the farms by the tenants, which cost them nothing, 47532.

Valuation of Grass Lands on Mr. Stuart's Method.

With regard to the estimation of value of grass farms, witness referred to the evidence of Mr. Stuart, Chief Inspector of the Estates Commissioners; Mr. Stuart, in answer to question 17571, suggested the offer of twenty-seven years' purchase on the gross fair rent of grazing lands, 47533A.—This was dangerous for the landlord, since he must depend on the judgment of one or two men as to what is a gross fair rent; witness considered £2,500, £2,000, or any lesser sum, an absurd estimate of gross fair rental in a case where a rental of £3,000 had been paid for a number of years, 47533A.

Actual Case (No. I.).

In a specific case, the rental was (roughly) £3,000 for 3,188 acres, 47533A.—Grass land, 47554.—And the estimated offer was £49,671—this invested at 3½ per cent., and added to half the bonus, would yield an income of £1,855, as compared with a gross income of £3,000, and a net income of £2,503, formerly received—the loss being £648 on net income, 47533A, 47550.—And the offer really amounting to 16½ years' purchase on gross rental, and 21½ on net rental; the landlord who refused such an offer was not unreasonable, 47534.—The income of £3,000 was for several years; how many witness could not say for certain, 47540-1.—Mr. Commissioner Bailey stated that a Western landlord refusing 27½ years' purchase, had referred to the offer as a bad joke; but the 27½ years' purchase was on the estimated rent as fixed by the inspector of the Estates Commissioners, not upon the actual net rental, 47536.

SAUNDERS-KNOX-GORE, Colonel W. A. G.—*continued.*

ANOTHER CASE.

In another case, the landlord was offered £68,000 for his estate, of which sum £62,350 was for permanent tenanted holdings; this offer amounted to 16⅓ years' purchase of the rents on a three years' average, and considering that arrears of rent were included in the sale, and that these amounted to £1,900, the number of years' purchase was reduced by half a year; the rents were mixed, first term, second term, and non-judicial: the full particulars can be obtained from the Commissioners, 47533A.—Witness had seen the papers in reference to these cases, 47534.—These landlords should have received a sum, which invested at 3½ per cent. would not result in a loss, 47551.

REASONABLE COMPENSATION FOR LANDLORDS.

Witness could not compare prices given by the Commissioners for grass lands, and ascertain their effect upon a landlord's income, but if their prices resembled the cases given above, the loss to owners must be appalling.—In Volume II., question 17630, Mr. Stuart suggested that the annuity was at least fifteen per cent. below the average fair rent, and if this were so, the landlord was asked to make an improvident bargain, and to involve himself in serious loss, 47553.—Witness did not recognise that to be relieved of mortgaged land would be a benefit, and leave the net income of the owner unaffected; he had no information as to this matter, 47535-6.—And considered the question of mortgage to be one between a man and his creditors, 47556-7.—Witness estimated that the landlord would receive half the bonus, because he was informed that in small estates, the bonus was absorbed by the expenses of the sale, 47508-10, 47509.—While in large estates the expenses amounted to half the bonus, 47508-10, 47537.

STATE SHOULD BEAR LOSS ON LAND WITH WHICH IT DEALS.

If the estates above mentioned were bought to improve the congested holdings, the difference between the market price, at which it is bought, and the price asked of tenants, should fall on the State, 47538, 47560-1.—The Commissioners might be right in exercising circumspection as to price in buying estates, and it was necessary that small holdings should be enlarged, but the loss, if any, should not fall on any particular class, 47539.—For the landlords as taxpayers, already pay their share, 47542.—And no class should be injured in promotion of the common good, 47543-6.—The shopkeepers would be benefited by the resetting of the land, but though some classes might benefit, no class should suffer, 47547-8.—If this was a new principle in the government of Ireland, they were always having new principles, 47549.

POSSIBLE LOSSES OF LANDLORDS ON SALE, AND QUESTION OF ENHANCED BONUS.

Statements by members of Commission, 47503, 47507.—Witness estimated that, on a certain rent and taking the first term at 18½ years, and second term at twenty-one years, allowing half the bonus to clear costs, the loss of the landlord would be £27 10s. on every £100 of income, 47508.—Witness had had little experience in sale transactions, 47509.—The larger the sale, the more cheaply it could be done, for with a small estate, the expenses absorbed all the bonus, while in a large one, they amounted to about half the bonus, 47510.—If the problem of congestion were chiefly confined to Connaught, there was reason for the suggestion that an enhanced bonus should be made to landlords in the province, 47510.—Witness withdrew the expression that Connaught landlords were "exposed to attack," by which he meant that they were asked to sell grass lands at a fair price, 47511.—If the enhanced bonus were not given, then the Estates Commissioners and Congested Districts Board should be directed to go elsewhere in Ireland for some of the land required to satisfy emigrants from Connaught, 47510.—Mr. Doran and Sir A. MacDonnell favoured this plan, 47511.

FIXING OF PRICE OF LAND BY PURCHASER UNSATISFACTORY.

It was unsatisfactory that the purchaser of land should fix the price, and this was in practice, the result of prior dealings, 47511.—The purchaser in this case was generally the Estates Commissioners, 47512.

SAUNDERS-KNOX-GORE, Colonel W. A. G.—*continued.*

INTERVENTION OF THE STATE IN BARGAINS BETWEEN LANDLORD AND TENANT UNAFFECTED BY THE POSITION OF THE STATE AS ADVANCING MONEY.

The owners objected to the intervention of a third party, when they had agreed with their tenants on a price, either for a tenanted holding or for a parcel of grazing land; these bargains were arrested on the ground that they are disadvantageous to the tenant, 47557.—But it was impossible by making a good bargain for the tenant to injure the landlord, 47414, 47557.—Though the question of price was a question between landlord and tenant, in which the State has no concern, 47559.—And the State is only concerned with a question of its own security for money advanced, 47558, 47559.—It should not intervene, because it should be prepared to bear any loss arising from transaction in land for the benefit of congests, 47560.—And the tenant is capable of holding his own in transactions with his landlord, 47562.—And is often as clever as his landlord, 47563.—Though the effect of bad bargains made by the State would be the impoverishment of the whole community, and therefore the State should be prudent about securities, yet witness imagined the system of zones was a sufficient safeguard, 47565.

EXAMPLE OF CASE REQUIRING REVISION.

Referred to the case in County Galway, where an estate was offered under the Ashbourne Act, and the Land Commissioners' Inspectors refused to consider the estate security for eight or nine years' purchase, yet after the Act, the landlord proposed to sell at a price within the zones, representing 24½ years' purchase, and asked whether there should be no revision of a sale of that nature, witness said that it was an extraordinary case, 47565.—And no doubt there was something to be said for the State having a voice in the bargain which was only made possible by its providing the security, 47566.

PROPOSED TRIBUNAL TO FIX THE SELLING PRICE OF LAND.

Witness advocated the formation of a tribunal to fix the value of a landlord's estate, and considered that a tribunal composed of judges of the High Court would be suitable, since the Court should be composed of men, the most impartial and independent in the country, and should hear both sides and fix the price on this evidence, 47513.—The judges were qualified, not by special knowledge, but by judicial minds, 47517-8, 47522.—Though the assessment of land value is a technical subject, the fact of rents having been paid for fifteen or twenty years is evidence of its value, 47519.—And the judges would hear evidence on the matter which would make their want of acquaintance with land values of no moment, 47523.—Witness had no opinion of expert advice on land questions, 47524.—He was not aware that a suit in the Superior Court would be more expensive than before the Estates Commissioners, 47526.—Witness would consider this Court superfluous, if the common basis of net income were recognised as a basis in selling land, 47515.—But in case this were not made an absolute basis, the judges might act as a Court of Appeal, 47520.

Documents put in by Colonel Saunders-Knox-Gore.

O'HARA, Right Rev. Monsignor.

See p. 27.

WITNESS'S SCHEME FOR MIGRATION WITHIN CROSSMOLINA PARISH.

Witness wished to call attention to a scheme for relief of congestion in Ballina Union; there were ten divisions in Ballina Union, scheduled as congested, and of these four were practically in the parish of

O'HARA, Right Rev. Monsignor—*continued.*

Crossmolina, of which witness was parish priest; in these four divisions there were 320 holdings of the value of £5 and under, all of which was miserably bad land, 47572-3, 47576.—While in the uncongested electoral divisions, to the east, and running from north to south, together with a portion of the Deal division which was scheduled, there were nearly 5,540 acres exclusively in grass, formerly occupied by small farmers, 47572.—This was good land, but some of it was deteriorating, having been in grass for fifty or sixty years, and would be more useful if tilled, 47574.—And would be typically good for small holdings, 47574.—If distributed among the uneconomic holders from the scheduled divisions, would provide twenty-seven acres each, to 200 migrants, or eighteen acres each to 300 migrants, or, if only 4,000 acres of this land could be acquired by the Congested Districts Board, or the Estates Commissioners, it would afford twenty acres each to 200 migrants, 47572.

SIZE OF NEW HOLDINGS.

Witness suggested twenty acres, because a family could live on this amount, which was a reasonable amount for a holding, 47574.—But a man of experience, like Mr. Doran, might make other arrangements, 47573.—Witness suggested that the land should be distributed to migrants from the same parish, 47573, 47575.—Who would require all this land, and more, if it were obtainable, 47576.—The land vacated by them might be used to relieve the congestion of the small holders remaining, 47573.

MAUDE, Captain ANTHONY.

See pp. 27-9.

ALLEGED REFUSAL OF LORD ARRAN TO SELL HIS ESTATE.

Witness wished to make a statement relating to previous evidence, given by Mr. Corcoran, as to the refusal of landlords to sell their estates, and wished to refute this, on behalf of Lord Arran, who was a large landowner, and was willing to sell lands, including those on his own hands, with the exception of demesne, 47577.—Witness understood Mr. Corcoran to state that Lord Arran had refused to sell, 47579.—But witness himself was negotiating a sale of the estate in North Mayo some years ago, 47579-80.—Which fell through, 47579.—Because the tenants refused to buy unless the estate were handed over to the Estates Commissioners, 47580, 47582, 47585, 47589.—Lord Arran was willing to sell, he had taken an active part in passing the Land Purchase Act of 1903, 47577, 47583.—And asked for the land such a price as, invested at 3½ per cent., would bring in his present income, 47577, 47625, 47627.—For convenience of estimating this, he was willing to allow inspection of his rentals for the last fifteen or eighteen years, in so far as they showed gross rental and estate outgoings, 47577.—Witness was meeting deputations from various parts of the estate, three years ago, and, until the tenants suddenly refused to buy except under these conditions, he thought the terms of sale had been actually arranged, 47580, 47589.—Though only one townland was actually sold, 47581, 47590.—Lord Arran refused to hand over the estate to the Estates Commissioners, 47580.—But witness, on his behalf, proposed that if the tenants could previously agree with him about the price, he would ask Lord Arran to relinquish the estate to the Commissioners, 47580, 47599.—Though Lord Arran and witness felt themselves able to negotiate the sale of both tenanted and untenanted land direct to the tenants, 47589.—They were willing to hand over the untenanted lands to the Estates Commissioners, 47588.—And if the Commissioners to-day would give a sum which, if invested at 3½ per cent., would give Lord Arran his present income, witness would accept it, on behalf of Lord Arran, 47594.—Witness had been approached by only a few tenants, with a view to re-opening negotiations, within the last eight or ten months, 47591-2.—And had replied that he required the names of those tenants who wished to buy, 47593, 47597.—Because it was not worth while surveying a large estate, unless the bulk of the tenants were willing to come to terms, 47593.—This reply was made to Mr. Purdue, of Mullaghafarry, near Killala, 47598.

MAUDE, Captain ANTHONY—*continued.*

WISH OF TENANTS TO HAVE PRICE OF LAND FIXED BY THE ESTATES COMMISSIONERS.

The tenants, on their side, suggested that the fixing of the price should be left to the Estates Commissioners, and stated their willingness to abide by a price so fixed, 47586.—Witness did not consider this a reasonable attitude, 47587.—Though he was willing to leave them to fix the price of the untenanted land, 47588, 47600, 47601, 47603, 47613.—Because the amount of untenanted land was small, 47602.—Only 640 acres of good land, 47602, 47610.—And unimportant in comparison with the large estate, 47604, 47614.—So that as Lord Arran was anxious to sell, and did not wish to stand in the way of benefits to his tenants, 47616.—Nor think it worth while fighting about £1,000, or so, 47602, 47609.—He was willing to sell it at any price fixed by the Estates Commissioners, 47599, 47613.—He did not think their price equivalent to the value of the land, 47601.—Though naturally he was anxious to obtain the best price possible, 47615.—The full value, 47611-12.—One of the objects of the Act of 1903 was the distribution of grass lands, 47584.—And another was the restoration of the evicted tenants, 47596.—Which was one of the conditions of a general settlement of the Irish Land Question, 47596.—Witness was not aware that Lord Arran, during the last few days, had consistently voted against the Evicted Tenants Bill, but could say on behalf of Lord Arran, that the Estates Commissioners could reinstate evicted tenants, split up grazing lands, or anything else, provided Lord Arran obtained his terms, 47598.

NO DIFFICULTY WOULD HAVE ARISEN IF ESTATES COMMISSIONERS HAD ADOPTED THE "FAIR PRICE."

The difficulty with regard to the sale of Lord Arran's Estate would never have arisen if the Estates Commissioners had been in the habit of giving for estates such a sum as, invested at 3½ per cent., would represent the net income of the landlord, and if this were their custom, no compulsory sales would be necessary, 47606.—And there would be a general transfer of land, as much as the Estates Commissioners or Congested Districts Board wished for, though the landlords should retain their demesnes, 47607-8.

WITNESS'S EXPERIENCE IN SALE OF LAND.

Witness had great experience of selling land, having sold over £1,000,000 of property in all parts of Ireland since the passing of the Act of 1903, 47594, 47606.—And in some cases, in demanding a price from the tenants, put forward a standard of net income of the landlord, 47618.—Witness had sold land to the Congested Districts Board, 47617.—Witness had sold a good deal of land in Donegal, on the terms for which he would have sold the Arran and Templemore Estates, 47619-20.—Witness thought he had not sold land in Donegal before the Act of 1903, but possibly had sold part of the Connolly Estate before then, 47620A.

ADVANTAGE OF LAND PASSING TO TENANTS THROUGH THE ESTATES COMMISSIONERS.

Witness thought the Congested Districts Board had done much good, and made enormous improvements on the estates they had bought, 47621.—There would be no objection, from a landlord's point of view, to the application of remedial processes to land by the Estates Commissioners or other public bodies before the tenants should become tenant purchasers, 47622-3.—And he would approve, if the Congested Districts Board could arrange, after the landlord had agreed with his tenants as to the price of land, to take over the land and improve it, 47624.

OFFER TO TENANTS ON BEHALF OF LORD ARRAN.

In negotiating about Lord Arran's land, witness said he would give a reduction of 4*s.* in the £, 47628.—But he did not think he asked a certain number of years' purchase, 47625.—Witness had many interviews, and could not say positively that he stated to tenants that he must obtain a certain number of years' purchase, so that Lord Arran should retain his net income, 47625-6.—But he positively did say that the terms on which Lord Arran would sell would be such as would preserve for him his present income, 47628.

MAUDE, Captain ANTHONY—*continued.*

MR. PRATT'S CASE.

Mr. Pratt, in 1899, offered to sell his land at 18 years' purchase, at a time when Land Stock was at 112, and Mr. Pratt's land had not been reduced for a second statutory term, 47629, 47630.—But when again approached by his tenants, in October, 1903, his rents had been reduced on a second stautory term, and if he had obtained 27 years' purchase he would still be getting less than if he had sold in 1899 at 18 years' purchase, 47630.

REFUSAL OF ESTATES COMMISSIONERS TO DEAL WITH LAND.

The Estates Commissioners would now refuse to take over an estate, even if the landlord and tenants had agreed upon terms, 47630.—If the Congested Districts Board would take over estates, their sale would be simplified, 47631.

KEAVENEY, Rev. PATRICK.

See p. 29.

COMMENTS ON EVIDENCE RELATING TO LORD ARRAN'S ESTATES.

Witness wished to make a statement referring to Mr. Maude's evidence, and to deny that any deputation of tenants waited on Mr. Maude or Lord Arran, or that the affair of selling the Arran Estate had ever progressed so far, 47632.—The tenants had heard that Lord Arran was prepared to sell his estate, and a meeting of tenants was called at the Board-room, Ballina, of which the clergy of the district were notified, and which the witness attended, at the tenants' request, 47633.—Delegates were appointed to ascertain the views of tenants, and the meeting was adjourned for a fortnight, and at the third and last meeting, terms were formulated, 47634.—Mr. Maude was not waited upon by a deputation, but attended the meetings like a tenant, 47633.—The third meeting resolved that the district of Shraheen should not be bought direct by the tenants, as it would be useless to them, being cut out into "rundale," two ridges wide, 47634.—There was some rundale at Shraheen and also at Ballycastle, 47635.—It was also resolved that the congested portion of Lord Arran's estate should be purchased through the Congested Districts Board, and the non-congested part through the Estates Commissioners, 47634.—But it was not proposed to hand over the estate as a whole to the Estates Commissioners, or to have offers made by tenants, and the price run up as at an auction, as Mr. Maude demanded, 47634-5.—An auction consisted in buyers bidding against one another, and witness thought that in the sale of land, as of other commodities, the seller should be asked what he will accept, 47637.—Witness heard to-day, for the first time, that the standard of the net income was acceptable, 47637-8.

O'MALLEY, Mr. JOHN.

See pp. 30-5.

CONGESTION IN KILMORE, AND ACTION OF THE CONGESTED DISTRICTS BOARD.

The parish of Kilmore was in Belmullet Union, in the electoral divisions of Brighamstown, North and South, and was entirely in the peninsula of Erris, 47639-42.—The population of the parish was 2,876, and the valuation £3,440; of this, nineteen persons held 10,028 acres, with a valuation of £1,531 9*s.*, about 50 per cent. of the value of the two divisions, 47643, 47671A.—These were almost all non-residential holdings, the best grass land in Mullett, 47643.—There were many small uneconomic holdings, 47644, 47650.—In Fallmore, 47646.—At Ardmore Point, and elsewhere, 47644-5.—And contiguous to them, grazing ranches, which were all tilled before the Famine, and until recently; long after 1846 the population of Mullett was double what it was now, 47648-9.—The Congested Districts Board had bought some islands, 47652.—And the island of Inniskea was sold to them by Mr. Walsh, 47657-8, 47661, 47661A.—This purchase had benefited the islanders, but they were only a few, 47668, 47670.—It was not wise for the Board to purchase this small amount of land, 47663, 47666.—It would have been well to acquire the grass land on the same property, 47668.—There was, in the peninsular, enough grass land to make most of the small holdings economic, 47671A.

O'MALLEY, Mr. JOHN—*contniued.*

PROPOSED COMPULSORY PURCHASE OF ERRIS.

Erris should be considered as a whole, and bought *en bloc*, by the Board, 47670-3, 47675, 47742, 47746, 47761.—Which should receive compulsory powers, 47670, 47742.

REFUSAL OF LANDLORDS TO SELL GRASS LAND.

The landlords refused to sell grass land, 47729, 47734.—For instance, Mr. Charles M'Kyne, 47736.—And Mr. Walsh, who refused to sell his non-residential grazing land near Aughlian, 47664-5, 47735-6.—This witness knew from hearsay, but could also give proofs of, 47737-40.—Landlords refused to sell because their estates were encumbered, and they would not be entitled to bonuses, 47739.—The tenants held meetings, and sent deputations, offering to buy land, 47732.—Most of the tenants in the neighbourhood approached their landlords, 47653.—But there were no direct sales from landlords to tenants for the last twenty years, 47655-6.—And if landlords did not refuse to sell, they asked fabulous prices, 47730.—Twenty-four or twenty-six years' purchase, when tenants could not afford more than twelve or fourteen, 47739.—Prices that the Board would not pay, nor the Estates Commissioners either, 47730.

DELAY IN PURCHASE OF GRASS LAND.

Witness disapproved of buying small patches of grass land, 47741-2.—As there was no hope for Erris till the whole of the waste land was acquired, 47675.—And the present plans would take a century, 47670, 47743.—And in the meantime, the young people, unable to live on the small holdings, were emigrating, or going to England as migratory labourers, 47675.—While in non-congested areas where land was unincumbered, five times as many purchases had taken place, 47744.

DRAINAGE, AND MIGRATORY LABOUR.

The whole of Erris when bought, should be drained, 47673-4, 47746, 47748.—More drainage was required in Ballycastle than the remainder of the district, 47746.—There was enough labour to drain the whole barony, 47749.—The young labourers, who usually migrated, would work here for less than they earned in England, 47750, 47760.—For one and sixpence a day, 47751-2, 47760.—Migratory labourers earned the rent for the household and to pay for the Indian meal, which formed much of their diet, 47754, 47758.—They were away in May, June, July, and August, 47755.—And when at home they could not weed the land, 47754.—Or do drainage work, because the land was flooded, 47756.—Witness was not aware that drainage work was always done between September and April, 47757.—Witness's father's farm was not well drained, 47726.—It consisted of twenty acres in a river valley, at the river level, and consequently had no proper outlet, 47724-28.

TEMPORARY TENANCIES UNDER THE BOARD.

Witness considered that the small holders would be willing to accept temporary tenancies from the Congested Districts Board, for four or five years, becoming peasant proprietors when the remedial processes were finished, 47759.—For he would see his farm improving, and be paid for the work, 47766-8.—A charge being made on the holding to cover part of the expenditure, 47769.—But nothing less than immediate purchase of the grass lands by the Board would satisfy tenants, 47761, 47763-5.—For they were disgusted at the delay which had occurred already, four years having passed out of 68½, 47761-2.—And reductions of 8*s.* an acre having been made in non-congested areas, 47763.

PARISH GRANTS.

The total amount paid in Mayo in Parish Grants, to March, 1905, was £21,857 4*s.* 3*d.*, of which Swinford Union received £10,806 5*s.* 4*d.*, 47770, 47773-5.—

O'MALLEY, Mr. JOHN—*continued.*

Ballina Union, £1,428 4*s.* 6*d.*; Belmullet Union, £1,820 9*s.*; Ballinrobe, £597 7*s.* 6*d.*; Castlebar, £895 12*s.* 6*d.*; Killala, £80 6*s.* 6*d.*; Claremorris, £3,261 10*s.* 7*d.*; Westport, £2,758 1*s.* 1*d.*, 47775.—This money was obtained from Imperial taxes, 47771, 47788.—And it was a grevance that Belmullet, the poorest Union in Mayo, should not get its fair share, 47788.—Belmullet had a grant of £450 for a bridge, 47777, 47779.—And a small grant for lace making, 47779.—And a grant from the Board of Agriculture, 47777.—But no grant could make up for the apparent disproportion, 47780.—Swinford, having no sea-board, had no grants for piers or fisheries, 47772.—There had been no expenditure at Porturlin, Portacloy, or Inver, except small sums, 47781-3.—A parish grant was refused to Belmullet ten years previously, on account of some difference between the chairman and the people, 47784.—And other parishes had been refused on like grounds, 47798.—Witness had no doubt that all the parishes had applied, 47796.—And that some had been refused, 47793.—Among others, Bangor, 47794, 47798.—He did not think it superfluous to apply for a grant, 47786.—Or that the Parish Committee should do work in a proper manner, 47787.—Nor did he see any reason why Erris could not have a parish committee and its share of grants, nor could he say where was the fault that Kilmore should not have its fair share, 47789.—Unless it arose from other localities making more applications, 47790.—Witness lived in Belmullet, but was not sure whether there was a Parish Committee there, 47779-81.—His interest was merely in the relative sums spent in different Unions, and his opinion was that the money should be equally divided between the different districts, 47802.

FISHERIES—LACK OF TRANSIT FACILITIES.

Erris should have a source of livelihood in fishing, but, owing to want of transit facilities, it had no market for fish, 47676-7.—The fisheries might be a gold mine; eight to eleven tons of fish had been caught at one time by Scotch fishermen in the locality, but fish had rotted on the shore, at Belderig, to the value of £100 a day, because there was no means for conveying it the forty miles to Ballina, 47677.—There was a boat service to Sligo, but fish could not be sent to Dublin in saleable condition, as the boat did not run in connection with the train, 47679.—At Mr. O'Kelly's request, an extra trip was added; but even then the fish were spoiled when it reached England; it was usually sent to Blackburne, 47680.—When a Mr. Murgatroyd came from Scotland, 47682.—He benefited by the extra service, which entailed the Sligo boat running three times a week, instead of twice, 47685, 47687, 47688-9.—And exceptional arrangements were made on several occasions to suit him, 47705.—He had the fish iced and sent every other day in time for the train, 47686, 47688, 47701.—The vessel, which plied between Belmullet and Dublin, 47691.—Called at Belderig, Porturlin, Portacloy, and Ballycastle, 47694, 47704.—On every trip, weather permitting, according to Murgatroyd's contract, 47698.—But if the weather was bad, it was not possible to call at these stations, and the fish was left, 47698.—If there was a gale, the fish usually taken from Belderig by Murgatroyd, to Sligo, was sent by cart to Killala, and thence, if possible, to Dublin, 47699, 47702.—Without being iced, for there was no ice on shore, 47703.—Murgatroyd iced the fish on board the steamship "Tartar"; he obtained the ice in Dublin, 47690-1.—The extra trip was now discontinued, and, the fishing being over, the boat now only called at Ballycastle and Portacloy on the journey up, unless it carried merchandise, 47695-6.

THE BLACKSOD RAILWAY.

It was proposed that the contemplated Blacksod railway should touch the deep water at Broadhaven Bay, which would be an advantage to the fishing of the whole North coast, if it provided a permanent service, 47709.—It was held that a greater number of people would be served by a railway on the North coast than by one on the Mulranny route, 47712, 47715.—The fishing at Broadhaven was better than at Blacksod, 47713.—And the population in that district had increased, 47715.—Witness did not think that a North coast railway would divert trade, 47716.

O'MALLEY, Mr. JOHN—*continued.*

—He would give no opinion as to the best route, for the people of Belmullet had resolved not to confuse the question by advocacy of any particular route, but to leave the route to be fixed by Government, 47710, 47719.—Though he believed the "All Red" route to be the best of the two, 47716.—There was no hope for Belmullet fisheries without a railway, as it was now forty-two English miles from a railway station, 47718.—The people of the district were not prepared to pay for a railway, 47721.—And he believed that there was no question of a tax, the Midland Railway having discussed the matter, 47720.

SCANLAN, Mr. FELIM.

See pp. 35-42.

WITNESS'S HOLDING.

Witness was a tenant farmer, born in Erris, and having a holding between Belmullet and Ballina, at Glencastle, 47803-6.—His holding was valued at £4 5*s.*, 47807, 47904.—The acreage was about fourteen acres of reclaimed cut-away bog, and in addition a few acres of mountain land, 47808-9, 47905.—A good deal of the reclaimed fourteen acres was impossible to till, being too poor; some of it gravel land, which had no soil over it, and would only grow grass in spots, which was not fit for cattle, and was poor feeding for a goat; witness allowed cattle to run on it, 47811-15.—This land amounted to an acre or an acre and a half, and there was another portion of the holding which was tolerable for grazing, but impossible to till, as the surface soil had been torn away by a river, 47817-19.—The remainder, eight or nine acres out of the fourteen, or perhaps ten, could be tilled and meadowed, 47819-20.—His rent was £5, 47906.—Witness had inherited the farm from generations of ancestry, 47923.—Witness would till more land if he had help, 47907.—He considered the meadowland as tillage, because it was necessary to manure it, 47908.—For this purpose he used manure from the farm, and also half a ton or more each year of artificial manure, though it was expensive in the West of Ireland, 47909-10.—Witness was not an exception in this matter, other holders of £4 and £5 valuation using artificial manure; a ton of it was used to-day compared with a hundred-weight thirty years ago, 47911.—Witness worked his holding on a mixed system, treating grass as a rotation crop, 47909, 47921.—Which he forced, and cut for the stock in summer, 47920.—The holding was too small, consequently witness, though sober and industrious, had in eighteen years lost rather than gained on the farm, having lost capital invested in it, 47921-2.

STOCK AND ADDITIONAL HIRED GRAZING.

Witness kept nine or ten cattle on the average, 47916-7.—Some milch cows, some two-year-olds, and a few calves, 47920.—He sold his young stock at two or three years old, never so young as six months, 48008.—He sold them to local men or strangers, and was not interested to enquire where the strangers came from, 48013.—Farmers generally sold stock because they were in want of money, rather than because the particular time of sale was the most profitable to them, 48020-1.—To sell at two years old was the most profitable plan, 48022.—His own stock would be more profitable, if he had a few acres of good land upon which to fatten them before sale, 48017-8.—For his grass land would not maintain them without the addition of cut grass, 47920.—He could not keep cattle at all unless he were able to hire extra grass land, 47916-8, 48024-6.—Or would be obliged to sell them much younger, 47126.—It would always be possible to obtain grass land from larger holders, who could not fully stock their farms, 47126.

ACTION OF CONGESTED DISTRICTS BOARD WITH REGARD TO THE CAREY ESTATE—NEED FOR COMPULSORY POWERS.

Witness knew little of the purchase of land by the Congested Districts Board, except with regard to small patches, 47863A.—The land they had acquired in Erris was in the Union of Auglian, with which witness had small acquaintance, 47864.—Part of the

SCANLAN, Mr. FELIM—*continued.*

Carey Estate, recently bought by the Board, was in Rathmill, six miles from Belmullet, to the south; it was near Lisshall, and was called Duyork, 47821, 47823-5.—And was thickly populated, 47821.—The other part was within a quarter of a mile of Belmullet, on the road to Glencastle, 47821-2.—And consists of a patch of grazing land, and one small holding, 47821, 47826.—The Board acquired the land, and enlarged the holding of this tenant by the addition of grazing land, 47821-2, 47827.—And the rest of the land they divided into two tenancies, for which purpose they must build two houses, 47829-30.—Witness did not know where the new tenants were to come from, 47831-4.—If the Board had bought the adjoining townland of Anticollaun, 47821, 47834.—Which was on the Stuart Estate, 47834.—And within half a mile of the grazing land, 47835.—And situated on the road which runs through the grass land, 47821, 47835.—They could have provided for the congests of Anticollaun, with no expense to them, 47821, 47924-5.—Which would have been a great benefit to the tenants, 47821.—And would have saved the expense of building two cottages, 47838, 47844.—Which would amount to £200 or more, 47821.—The only cost of the whole scheme being the purchasing price of the grass land, 47923-4, 47835.—It was more economical to enlarge holdings without disturbing the people, 47838.—And improvements that must be paid for by an annuity system were of little benefit, 47838.—To do this, the Board must have bought the townland of Anticollaun, 47841.—Which would have required compulsory powers, 47821, 47843.

Distribution of Grass Land a Remedy for Distress and Migratory Labour.

The acquisition and distribution of grass land by the Congested Districts Board, or some such body, invested with compulsory powers, was the only chance of improvement in the neighbourhood of Erris, 47821, 47843, 47926.—Most of the prevalent distress was due to the smallness of the holdings, for, no matter how industrious the tenant, he could not live on a few acres, 47882.—But was obliged to resort to relief works, 47882.—There were in Belmullet 1,800 holdings of £4 valuation and under, which were too small to allow of modern farming methods, and rotation of crops (in which witness included grass crops), 47861, 47928-30.—Consequently, the land became impoverished and foul with weeds, having been constantly under tillage from time immemorial, 47861.—Even an addition of two acres to a holding might much improve it, 47861.—And if the forty acres of grass land on the Carey Estate had been distributed, it would have benefited the congested tenants of Anticollaun, 47859.—Even one acre, if prime land, would improve a holding, 47883.—Many tenants on the Carey Estate were migratory labourers, who would prefer to remain in Ireland, and an addition of five or six acres of good land would go far to keep at home, at any rate, some of these migrants, who were now compelled to migrate, in order to assist their families, 47846-55.

"Economic Holding," "Rundale," Mountain Land, etc.

Witness described as an economic holding, a farm on which a man could live and bring up his family in some measure of respectability, without begging of Government or other persons, 47936.—A holding of £5 might or might not be economic, and to reduce the rent by 50 per cent. might be a great benefit to the tenant, 47937-8.—A farm which could not be worked with horse labour might be economic, if it were sufficiently large, or the annuity sufficiently low, 47933.—Though the difficulty of working these farms was great, for, owing to the situation of the holding, and the character of the soil, the labourers had to carry manure and produce in creels, 47861-2, 47866-7, 47933.—And the land had to be broken with pick and shovel, while the farmer with a level farm could do four times as much work with a plough, 47861.—This should be considered in fixing fair rents or purchase annuities for mountain farms, 47934.—A man might have as much as twenty-eight acres of "rundale" in different patches, and yet be extremely poor, since stock fed on rundale required watching, 47963.

SCANLAN, Mr. FELIM—*continued.*

Drainage, Reclaiming and Liming.

The Congested Districts Board should assist in reclaiming, draining and liming mountain land adjacent to small holdings, thereby much increasing the value of the holdings, 47821, 47968.—The use of lime on a properly drained soil was beneficial, 47869.—And witness suggested that the Congested Districts Board should build a lime-kiln at a small cost, and continue quarrying and burning the lime, which was plentiful in Erris, selling it to the tenant farmers at a small or nominal price, 47869-70.—Or, failing that, should approach the landlord of the Atkinson estate (who now forbade the quarrying of lime at Glencastle), and purchase the right to do so, 47869-70.—The land generally was deficient in lime, except where it had been treated with sea-manure, and consequently diseases such as "Finger-and-toe" were prevalent, and turnip and other crops could not be grown, 47871-2.

Afforestation and Tree-Planting as Relief Work.

The Government should undertake the afforestation of large mountain tracts in the West; this plan would benefit Erris, 47889.—Witness would suggest planting, twenty, thirty, or 100 acres of mountain land in 1,000, 47893.—Informed that no profitable return could be expected from planting less than 1,000 acres in a block, 47894-6.—Witness thought that very little interference with grazing would accrue from reasonable planting, either to inhabitants, stock, or grazing, but no objection would be made to planting thousand-acre blocks, 47897, 47903.—There was little good grazing on the mountains, 47897-8.—Shelter belts would be less desirable than planting on a large scale—afforestation would provide work in times of distress, which would be better than the ordinary forms of relief works, 47888.—Relief works are resorted to by the smallest holders, but where there are several grown men in one family it is possible for some to remain at home, and some work on relief works; this is seldom done by the larger holders, 47885-7.

Substitutes for Potatoes—Grain Growing, Mills, etc.

Witness thought that the building of a cornmill by Government would encourage the cultivation of grain, 47875.—The present year was likely to be a bad one for potatoes, as, despite extensive spraying operations, the potato was attacked by a new disease (Ball Bán or White Spot), which attacked the stalk, and was more injurious even than blight, owing to the wet weather, 47872-5.—If the potato crop continued to be insufficient, the people must look for a substitute, 47875.—Many now subsisted on Indian meal, without milk, 47861-47876.—And if there were a possibility of getting it ground, farmers would try to grow Indian corn, which would be a good food for man and beast, 47876.—Witness considered grain a better substitute for potatoes than parsnips or other root crops, 47877.—And believed that was possible for the small holder to grow spring wheat, in selected spots, in Belmullet, 47875, 47939, 47942.—Witness had been in America, where spring and winter wheat was grown, 47914-5, 47941.—And thought the Belmullet climate not unsuitable, on account of its prevalent sea-breezes, 47878, 47942.—The wind did sometimes injure the grain crops, but risks must be taken, 47878. Witness did not remember the existence of cornmills in Belmullet in former times, 47880.—Father O'Hara had opposed this scheme when witness had suggested it four years previously to six members of the Congested Districts Board, 47875, 47939.—Father O'Hara had, at the time, convinced witness of the unwisdom of building a mill, stating that mills which ten or fifteen years before were working satisfactorily were at that time useless, but since then things had changed again, and Indian corn had risen four or five shillings, 47876.—The cultivation of small patches of grain would not keep a mill going, but in time it was hoped that two or three thousand farmers would each grow from half an acre to an acre or more of wheat, oats, barley, rye, etc., which would keep a mill working—no one now grew wheat, owing to lack of means for grinding it, but witness

SCANLAN, Mr. FELIM—*continued.*

believed this was the only reason, and would himself grow wheat if a mill were erected, 47943-47.—Witness considered the cost of building a mill to be a question for an expert, 47881.

TEMPORARY TENANCIES—ADVANTAGES AND DISADVANTAGES.

Witness believed that tenants would strongly object to remaining tenants of the Congested Districts Board for a term of four or five years, while their holdings were being improved; he himself would object strongly, 47952.—For he believed that the tenant would eventually be obliged to repay large sums of money, 47953, 47962, 47965, 47995, 47997.—This would saddle the tenant with a responsibility he might find it hard to support, for if £30 or £40 were spent on improvements, the repayment might handicap the tenant for life, 47965, 47990.—Witness had heard of the Dillon estate, and, rather than have the same method tried in Erris, would prefer that the tenant should have immediate ownership, and improve his land himself, 47954-6, 47962, 47972, 47979.—Improvements in Erris would take a considerable time, as it needed reconstruction from end to end, 47949, 47957-8.—Witness thought a few years would be sufficient, 47950.—And strongly objected to the Board holding land for more than five or six years, 47974.—With plenty of labour, two years would be enough for drainage and large improvements, 47974-6.—Witness knew of no place where sufficient labour for drainage works had been lacking, 47976-7.—If it was perfectly clear to witness that the reconstruction of the barony of Erris would take three, four, or five years, witness would not complain of their holding land for three years, 47978.—In the case of large arterial drainage schemes, the Government should appoint engineers and hire labour, and this could be done when the land was occupied, 47964, 47981.—There were very necessary works, such as arterial drainage, main fences, main roads, and reconstruction of holdings, which must be done, 47988.—And which a tenant cannot undertake for himself, 47967-8.—Also the Government must reclaim mountain land, where the local farmers were unaccustomed to and uninformed about reclamation, 47968.—And the sale of "rundale" direct to tenants, without restriping, was impossible, 47927, 47983-4.—But where the tenant was himself able to undertake the improvements, possession was an incentive to industry, 47956, 47963, 47987.—And possession should be given as soon as possible, 47979.—Witness considered that schemes of arterial drainage, etc., should not be charged to the improved area, 47982.—But they are expensive, and the Congested Districts Board must not hamper its efforts in other directions by incurring undue expense; they must recoup themselves to some extent, and if immediate possession were given to the holder, the Board must increase his annuity, 47996.—The value of the land would be augmented, 47997.

TEMPORARY TENANCIES ADVANTAGEOUS TO THE TENANT.

The alternative plan would be for the Board to retain possession of the land for a term of years, collecting the rents (old or reduced), and spend them on the property, 47991-6.—This would be a more favourable plan for the tenant, who could have no increased annuity to pay in the future, 47996, 48001, 48008.—This plan the witness preferred to an increased annuity, 48000, 48004-6.

PARISH IMPROVEMENTS IN ERRIS.

Witness wished to state that the Congested Districts Board could point to no irregularity in the administration of the Parish Improvement Scheme in Erris, for nine or ten years a grant of £100 was received by Belmullet, of which a small part sometimes remained unexpended, owing to applications being withdrawn; this money should be granted to other applicants, and the fact of its being unexpended was no argument that the £100 was more than was needed, for £300 could, with advantage, be expended in the district, 47968, 47970.

HEGARTY, Rev. J. J.

See pp. 42-52.

AREA, POPULATION, VALUATION, ETC., OF ERRIS.

The Union had an area of 179,245 acres, 48027.—There were 2,297 holdings in Erris, of which 1,862 were under £4, 272 between £4 and £8, 76 between £8 and £10, 25 between £15 and £20, and 62 over £20, 48034.—The population was 13,835, and the poor law valuation per head 15*s.* 10*d.*, and if the valuation (£1,378) of grazing lands in Erris were deducted, the valuation per head of the population was only 13*s.* 9*d.*, 48027.—Which was the lowest valuation in Ireland for a whole Union, though individual electoral districts might be lower; the land was extremely poor, but there was sufficient land in Erris to give 15½ acres to every person; the coast line of the barony of Erris was 336 miles, and the whole barony was larger by forty-six square miles than County Louth, and by 10,000 acres than County Carlow; the population was agricultural, or along the sea-board a mixed fishing and farming population; there were 512 houses in Erris with only one room, 1,086 with two, and 91 with three rooms, 41 with four and 100 with five rooms, 48028.—Witness considered that valuation and population were a test of poverty, the people having to live on the land, 48029.—If a revaluation were to take place some land would have increased in value, having been reclaimed since Griffith's valuation, and some, having gone out of cultivation, would now be of less value, 48031.—However, valuation was the readiest, and in many cases, the only possible test to apply, 48033-4.—Since 1878 there had been seven acute seasons of distress in Erris, in which relief works had been established by Government to enable the people to live, 48034-5.

PRICE OF LAND BEFORE, AND SINCE, ACT OF 1903.

Before 1903, only a few small properties were purchased, there were then two cases of property purchased by one landlord from another, the first was valued at £120, and bought for £450 at four years' purchase, 48036, 48039.—The second at 9½ years' purchase, was bought through the Landed Estates Court, witness could not say whether 9½ years' purchase of the valuation or the rent, 48036, 48039.—The Congested Districts Board also bought two properties in witness's parish, one at ten and the other at 10¼ years' purchase on the rental, 48036, 48040.—There were other properties offered for sale, but not sold (witness was informed), because the Commissioners did not consider them sufficient security for an advance of ten years' purchase money, 48036, 48041, 48044, 48049.—This was a property near Bangor, known as the Blacker property, and afterwards bought it at 19½ years' purchase, 48042, 48045.—Directly by the tenants, with the game reserved, 48045.—At the same rents, which were all first term rents, 48046-7, 48058-9.—The Board had recently bought two other properties, for the cheapest of which they had given 17 years' purchase; witness had approached all the landlords who owned land in the parish, 48060.—Most of them had been approached constantly by tenants, 48111.—Most stated that they were willing to sell, some did not state a price; a few asked to have a price offered, 48060.—Prices could not be arranged when the landlord did not specify price, 48061.

RISE OF LAND PRICES EXPLAINED.

This was bad business from the point of view of the State, 48048.—He could not account for the rise in land by a rise in farm produce, which had, in fact, fallen in price, 48052.—Land Stock at that time was not up to 114, and the difference was not thus explainable, 48050.—Witness considered that the intrinsic value of land had fallen since 1903, and could only think that the advance in price was the result of the change in the new Act of 1903 with regard to annuities; the present Act provided for 10*s.* sinking fund as against £1 5*s.* previously, 48051.—Comparing the difference between ten years under the old Act and ten years under the new, ten nine-sixteenth years under the old Act was the same as thirteen under the present; it produced an identical initial annuity, excluding bonus, assuming that Land Stock was at par, and the payment was in cash, 48053-4, 48056.—But if Land Stock was at thirteen per cent. premium there would be an addition, 48055.—And

HEGARTY, Rev. J. J.—*continued.*

looked at from the point of view of the tenant, who pays the annuity, the property was worth ten years' purchase, 48506.

Mr. Carter's Land.

One landlord, Mr. Carter, asked 26 years' purchase, 48060, 48070, 48077-8, 48081, 48115, 48117.—The same price he was asking for lands in Westmeath—this landlord would have been as well off as at present, if he had obtained 18 years' purchase, 48067, 48075, 48080.—And invested the money at 3¾ per cent., 48076.—He was solvent, 48090.—But the land was fully mortgaged, 48069, 48075, 48088.—To the extent of £40,000, 46068.—If it had not been mortgaged it would not have been sold at the price, 48071.—A mortgaged estate could be sold cheaper than one unmortgaged, 48070.—Witness, in estimating that 18 years' purchase would compensate the landlord, had allowed liberally for the expenses of sale, 48075, 48085.—And for paying off all mortgages out of purchase money, 48091.—These calculations had not been based on absolutely authoritative evidence, 48093.—Witness, however, was certain the landlord's books would not prove that 26 years' purchase would be required, if he was to retain his net income after the sale, 48092.—If the books should show this, witness would say, as he had in all cases of purchase, that the price given should produce for the landlord his net income, 48094.—Witness had seen it stated that landlords were willing to settle on this basis, 48086.—But this was not his experience of them, 48087.—And Mr. Carter's terms show that he would not be satisfied with it, 48084.—26 years' purchase, with the addition of the bonus of £3 12*s.*, is equal to 29 years' purchase, 48082.—And he would get cash instead of depreciated stock, 48083.—Witness and the tenants accompanying him did not actually make an offer to Mr. Carter, as there was no chance of coming to an agreement, 48095, 48117.—But replied that he would be fortunate if he obtained 20 years' purchase, 48079, 48116.—Mr. Carter gave the same terms to the District Council, 48116.—Witness was not aware whether Mr. Carter afterwards approached the Congested Districts Board, but all replies given by landlords were sent on to the Board, and witness believed that the Board asked every landlord to send on the usual application, 48119-20-1.—The Board wrote, stating they had received this letter from the District Council, which was sent to every landlord in Erris, 48122.—The rent on the estate was a first term rental, and if it were properly revised to the equivalent of 18 years' purchase, it would stand at 21 years' purchase, and would repay him, 48071.—Most of the rents in Erris were still standing as first term rents, 48072.—And were unrevised, because tenants were too poor to take the case into Court, 48073-4.—Witness did not consider it good policy to enforce a system by which any class, whether landlords or tenants, should suffer, 48096.—Therefore, if the land were required for re-settlement the landlord must receive his net income, 48097.—And the State should bear any loss, 48098.—The State, by establishing the bonus, had adopted the responsibility of supplying any deficiency, 48104.—But in the case of the Carter Estate there would be no loss, 48100.

"Fair Price" of Land.

Witness would not expect a landlord to sell if he were to suffer by the sale, 48062-3.—But the landlords, though expecting to benefit by the prices offered, held out for higher prices, 48065-6.—Why should the landlord get more than at present? 48101.—If the landlord's net income were likely to decrease in the immediate future, that should be taken into account by the State, in making good any deficiency in the price he obtained for land, 48103.—The landlord should receive his net income on second term rents, or their equivalent, 48106.—This should be calculated by deducting from the gross rental all legitimate outgoings in connection with the working of the property, 48107.—This deduction varied according to the nature of the property, and in Erris was sometimes 50 per cent., 48108.—But 20 per cent. certainly should be deducted, 48109.—Landlords' books should be open to inspection by representatives of purchasing tenants, 48110.

HEGARTY, Rev. J. J.—*continued.*

Sales Direct from Landlord to Tenant.

Negotiations between landlords and tenants had not resulted in sales, because the landlords, besides asking exorbitant prices, were not willing to sell to the Estates Commissioners or the Congested Districts Board, wished to make bargains direct with tenants, 48812.—Irrespective of the advice of the Board or Commissioners, and of the interests of the locality, 48813.—Between landlord and tenant, there was no free market in land, 48171.

The O'Hara Estate.

Mr. Carter and Mr. O'Hara were two typical landlords, 48114.—Mr. O'Hara stated that he would make no greater reduction that 4*s.* in the £—24½ years' purchase on first term and non-judicial rents; the valuation per head on that estate was 7*s.* 4½*d.*; subsequently tenants went into Court and got reductions varying from 4*s.* to 5*s.*, and averaging 4*s.* 6*d.*, 48122.

The O'Donnel and William Burn's Estates.

The tenants on the Burn's estate had judicial tenancies, 48122, 48124.—Were asked, fifteen years previously, to give permission to have their land striped, with a view to its sale to them; they consented, and some of them are not yet restored to their tenancies, but are paying, in many cases, their old rents on new holdings, and were "con-acre" tenants, 48122.—Or tenants who had no interest in the property, so that the landlord could sell the tenant's interest as well as the landlord's interest, 48123.—The principal mortgagee was trying to sell the land, stating that it was more valuable, because the tenants were not judicial but con-acre tenants, 48122.—The tenants ceased to be judicial tenants on the understanding that it should be to their interests, and at a request on behalf of Judge Ross's Court, 48125.—The O'Donnel estate had been offered to the Congested Districts Board and to the Land Commission, and had been valued and revalued, but no sale resulted, as the Land Judge asked more than its value; in bad years these tenants were the first to need relief, 48127.—Witness considered this a hardship inflicted by the Court, 48126.

Proposed Changes in Land Stock.

Witness considered that, owing to the discount at which Land Stock was issued, the transfer of land was too costly to the State; £100 cash paid on behalf of tenants, now cost £136 11*s.* 8*d.*, which was more than the price of a perpetuity at 3 per cent.; taking Land Stock at 82, there was a discount of 18 in the stock thus issued; the discount was £21 19*s.* and the bonus of 12 per cent. £14 12*s.* 8*d.*; witness suggested that the interest on Land Stock should be increased to 3 per cent., thus enhancing the value of the Stock, 48142-3.—(Leaving the sinking fund at 10*s.*), and that landlords should get two-thirds of their purchase money in Land Stock, 48128.—This alteration would affect the farmer's annuity to the extent of 5*s.* in the £100, 48130.—Farmers would not then give so many years' purchase, 48131.—A four per cent, annuity would disincline farmers to purchase, twenty-five years' purchase would represent the gross rental, 48132.—Witness considered that prices were lower under previous Acts, because they had a four per cent. payment, 48131.—There would have been more land sold in Erris if the Act of 1903 had not come into force; landlords then willing to sell at fourteen or fifteen years' purchase, now asked 23, 48133.—If a bonus of three to five years' purchase were added to the Ashbourne Act, and the Act of 1903 not enforced, it would increase sales immensely, 48134, 48136.—Especially in the poorer districts where the landlords expected to make their fortunes by sales, 48135.—If a bonus had been added to the Ashbourne Act, there would have been no need in congested districts for the Act of 1903, 48137-8.—Sales were taking place until the last, under the old Acts, 48139-40.—Witness knew it was stated by Government that further inducements must be offered to persuade solvent landlords to sell, 48142.

HEGARTY, Rev. J. J.—*continued.*

Improvements—Drainage, Striping, etc.

The state of agriculture in Erris was backward, much of the land being in rundale, which required striping, fencing, and some reclamation; while this was progressing, the people would be gaining agricultural knowledge, 48144, 48149.—This could not be done by the tenant, nor could arterial drainage, 48149-50.—Which was necessary before other drainage could be begun, and must be completed before the land was handed over to tenants, when one unreasonable person might prevent a drainage scheme, which was to the advantage of himself as well as his neighbours; those remedial processes should be done so as to be a model to farmers, 48151.—While the land was retained by the Board for a term of years, three or five, according to the work to be done, 48148, 48155.—Witness knew of a plot of this kind, which had cost the Board a good deal, 48151.—It had been sold, but the annuity was not increased, so as to recoup the expenditure, 48152-3.—Tenants objected to increased annuities, but witness considered it desirable that improvements should be made, and an addition made to the annuity, for these improvements, if wisely done, paid for themselves, 48154-5.—There would still remain the improvement of houses, 48150.—And much that the tenant could do for himself, for the land, being poor, would require labour to keep it in condition, and the tenant and his son, though capable of earning more elsewhere, would be best employed in improving or reclaiming their lands, 48156-9.—For this gave them constant interest and employment, 48163.—And it was improving to a family to work for its conjoint ends, 48158-9, 48162.

Maintenance of Drainage, and Deterioration of Holdings.

The maintenance of arterial drainage should be the care of the people benefited, 48164.—The Congested Districts Board should have power to enforce this, 48165.—If a tenant allowed his farm to deteriorate, and was obliged to sell it, the Congested Districts Board should have no power of pre-emption, for the tenant was sufficiently punished by his ill-success, 48166-7.—The Board should keep an agricultural instructor in each neighbourhood, to encourage maintenance of the improvements, 48172.—But should not have special powers in case of waste and neglect by tenants, for landlords were not dispossessed, except in extreme cases, 48173.

Consolidation and Sub-division of Holdings.

Other tenants should be allowed to buy holdings relinquished by unsuccessful farmers, unless the adjoining holdings were very large, 48168.—The purchasing owner should have a free market, 48169.—Witness had not considered the question, but thought the tenant purchaser should have a free market, 48170.—Freer than at present, 48171.—Consolidation of holdings (if too small) was a great benefit, 48175.—But might be a great evil, 48175.—It would be well that the State should pay the full market price for a holding relinquished through the improvidence of its owner, or other reasons, and hand it over to a new tenant, 48176, 48180.—Thus preventing unwise consolidation or sub-divison, 48176-9.—As was done in Germany, 48176.—Sub-division of holdings was an evil in the case of small holdings, 48174, 48179.—There was an unfortunate tendency to sub-divide, in small holders, 48194.—In holdings above £10 valuation this was not apparent, 48195.—The tendency was greater in the case of holdings inherited than of holdings purchased, 48027.—Witness expected, when he had more experience of purchased holdings, to find that the spirit of ownership would counteract the tendency to sub-divide, 48028-9.—And the payment of the annuity to the State further discouraged subdivision, 48209.—So that even in 68½ years, when nothing remained to pay, the owner would still be disinclined to sub-divide, 48210.—If the land were not to be indefinitely sub-divided, the sons of farmers must take to some other occupation, 48194.—They would either buy a business or a holding or emigrate, 48195, 48201.—An economic holding was one which could support the owner and his wife and family until the family grew up, 48201.—A holding not capable of supporting a wife and young family was uneconomic, 48200.—But not if it would not support indefinitely, an indefinitely large family, 48199.—Just as a business was economic, even though it would not support the whole grown-up family of the owner, 48197.—Witness did not contemplate the entire family living permanently on the soil, 48196.—In every county some of the grown sons adopted other callings, 48198, 48203.—Just as shopkeepers' sons did, 48202, 48206.—If there were lands available for agriculture, they should get them, rather than turn to employments for which they were unsuited, 48205.

HEGARTY, Rev. J. J.—*continued.*

Distribution of Grass Lands.

There was a considerable amount of grass land available for the relief of congestion, which should be split up and given to the local holders; about 200 new holdings could be made from the grass lands in Erris, as a basis of £5 to £7 a holding, 48184.—This would still leave a number of uneconomic holders in Erris—even if no land were given to the fishermen, 48187-8.—Who would not migrate in any circumstances, 48186.

Migratory Labourers.

The new farms of £5 to £7 would give employment enough, without resorting to migratory labour, if it was mixed land, 48191.—Most of the holdings included bog, 48192.—If the holding were half bog, it would provide sufficient employment, 48193.—But if all clay, a £10 holding would be necessary, 48193.—As a consequence of improvement some persons formerly migratory labourers had become permanent residents, but witness could not say definitely that this was due to the action of the Board in increasing holdings, 48190.—The tenantry had been considerably improved, 48189.—It was absolutely necessary that migratory labourers should return once a year to their homes, 48161.—And boys acquired bad habits, or lost their health, after working for three, four, or five years in England or Scotland; it was unusual that they turned out respectable men, 48161.—Though for a time they might earn considerable wages, 48160.

Live Stock.

Since the live stock schemes passed from the Congested Districts Board Erris had suffered considerably, 48180.—The horse-breeding scheme was unsuccessful, the class of hackneys sent not being suitable to Erris. 48145-7.—So that horses in Erris were worse than before, 48144.—And in the case of shorthorns, the Department supplied animals too highly bred, highly fed, and high-priced for bog lands, whereas an animal from one-third to one-tenth the price would be more suitable, it being better to raise the price of 1,000 calves by 5*s.* than 100 by £1 a head, 48180.—Farmers said they had suffered to the extent of £1 a calf for the change, 48184.—The calves were too tender and unsuited to the country, 48181-2.—There was only one cross-bred bull in witness's parish, which had been there six months, whereas there used to be four or five, 48184.—The 76 cross-bred bulls in Mayo were not in Erris, 48183.—The Congested District Board had supplied hardy cross-bred animals, and a good number of them, 48180.

Evidence of The O'Conor Don.

Witness wished, with reference to The O'Conor Don's statement, that Geesala population was sea-supported, to say it was the one seaboard population of Erris which did not fish; also, though he had said Erris was not congested, it was one of the most congested districts in Ireland, 48239.—The O'Conor Don had a small property in the Mullett which might have been sold, 48240.

Facilities for Fisheries in Erris.

There was a large fishing population in Erris, probably twice the number of persons mentioned in Mr. Green's return; about 300 currachs were not returned at all, not being registered with the Coastguards; there were about 100 yawls in Erris, 48210.—Their tonnage was about 2 tons, and they were the largest boats used in Erris, 48212-3.—No large boats

HEGARTY, Rev. J. J.—*continued.*

of the Zulu type existed in Erris, and it would be desirable to have some larger boats in which the fishermen could follow the fish out to sea, 48210.—And get larger hauls, like the Scotch boat, which in these waters had made a fortune in two seasons, 48229.—The canvas boats could be run up on the strand in bad weather, when the boats could not land at piers, 48227.—The harbour and pier accommodation was poor; in the rough weather there was no shelter, 48210.—And the piers were very small; the piers built by the Board at Porturlin, Portacloy, and Inver were too small for even yawls to approach in rough weather, 48217.—Some more piers should be built, 48210.—The Congested Districts Board had brought the fishing industry in Erris to its present relatively developed position. Within witness's memory it had been only one-third as important, 48214.—It had supplied loans for the purchase of boats and gear, and made piers and slips in a few cases, 48215.—There were seven or eight fishing stations, where the Board used to buy and cure fish, and where now merchants bought fish in good seasons, 48210.—With the exception of Broadhaven the harbours were exposed to northerly winds, 48218.—Broadhaven was near enough for large boats, both from witness's parish and Belmullet, and, unlike Porturlin and Portacloy, would not need a large expenditure to fit it for large boats, 48219-20.—There was as good fish at Broadhaven as elsewhere, 48228.—It would be better to create a fishing industry in Broadhaven than to create along the coast a number of persons, half fishermen and half farmers, 48221.—The industry admitted of development; all the year round there were some fish to be had; the supply of mackerel was very good; there was no market for herrings, 48227.—The lobster and crab industry was considerable, and was not confined to Erris, but owing to want of transit, the market was bad, 48232-4.—The long line fishing for cod and ling had been practically abandoned; witness thought the fish were less numerous and the appliances unsuitable, 48227, 48236.—But the cod and ling stations were still in workable condition, 48235.—Witness did not consider that mackerel and herring had displaced the larger fish, 48230-1.

Fishing Instructors.

The Congested Districts Board used to supply experienced fishermen from other parts of Ireland and from Scotland, to teach long line fishing, who resided in the district during the fishing year, and went out with the crews; at one time there were six of these instructors, 48223-4.—They were withdrawn when the long line fishing failed, owing to temporary disappearance of the fish, 48225.

Railway Facilities and Fisheries.

Railway accommodation was necessary for improvement of fisheries, 48210, 48222.—A coast railway would be better than one coming from Mullaranny for the general population, and the only convenient route for the fishing population, 48237.—It would be advantageous to link Erris with Sligo and that district, 48238.—And if the All Red Route came into existence, it would benefit the agricultural population of Erris to supply the large boats with provisions, 48238.

Industry.

The crochet industry, as established by the Congested Districts Board had been very successful, 48240.

Unsatisfactory Action of the County Committee in Erris.

Erris had been neglected by the Department, both from an industrial and agricultural point of view, 48240, 48289.—It was practically unrepresented on the County Committee, since the five members did not attend on account of the cost of travelling to Castlebar and hotel expenses there, which, at £2 10*s.* a head, would amount to £150 a year—an unreasonable sum to spend in obtaining a possible grant of £100; they would also lose three days each every time they attended a meeting, of which there were twelve per annum, 48240, 48282.—This was due not alone to the want of transit facilities, but to the system of work of the Department, which entailed too many meetings, on account of constant reference of the business to Dublin, 48241.—With a consequent

HEGARTY, Rev. J. J.—*continued.*

waste of time and money, 48241.—The Sub-Committee wasted its time, having no voice in the framing of the scheme, or the distribution of money, 48242.—It was unable to obtain information, and had passed frequent resolutions calling upon Mr. Carolan to furnish witness with details and information of the expenditure of the Department during its operations in Erris, 48242, 48245.—This Mr. Carolan refused point blank, giving as a reason the purpose for which witness required the information (to use in evidence before this Commission), 48243-4, 48247.—This was a gross dereliction of duty, 48245.—Witness had not with him a copy of Carolan's letter, 48246.—Witness had attended the first meeting of the Sub-Committee, hoping to prevent its establishment; he had heard of no result of any subsequent meetings of the Sub-Committee, nor of any advice taken from it, 48287.—It had no income, 48288.—An agricultural scheme should be framed by persons knowing the congested district, 48241.—The scheme of the Committee, 48240, 48248.—Was unsuitable for Erris, which received no share of the £290 voted for shows, nor the £205 for horticulture, since it was not a district for fruit-growing; it had some help from the £300 for butter-making and £10 grant for planting ten shelter belts of trees; witness adduced this as evidence of the unsatisfactory working of the County Committee in Erris, 48248.—The district did better under the Congested Districts Board, 48249.—One Committee for the whole county was unsatisfactory; the active voting members of the Committee all came from uncongested districts or from uncongested portions of congested districts, 48280-4.—For example, Mr. Corcoran, of Killala, 48285.—There was only one scheduled district in Killala, though there might be as much congestion in Killala as in Claremorris or Swinford, 48206.

Scheme of Witness for Agricultural Instruction.

Witness proposed that the improvement of agriculture in Erris should be undertaken by the Parish Committees, 48249.—Erris required special treatment, 48265.—Witness's plan was the formation of a central body, consisting of two members from each Parish Committee, 48249, 48266.—With the addition of the County Councillors eligible under the rules of the Parish Committee; the County Council would continue to levy the rates, as at present, and would hand over the rates for the congested districts to this Central Body to administer, 48252-3.—Instead of to the County Committee as at present, 48252.—The income of the Central Body would consist of the proceeds of the penny rate (£45 in Erris), 48251, 48254.—And of the grant for the special fund for congested districts, which could easily be adjusted, 48250, 48252.—The Parish Committee would provide no funds, 48268.—And the surplus which would be needed must be obtained from the provision for special treatment of congested districts, 48268.—The Central Body would provide each Parish Committee with £100, together with the grant from the Board for agricultural purposes, 48249, 48269-70.—There were four parishes in Erris besides Belmullet, 48275.—All with Parish Committees, Bangor and Kilmore having two each, 48276.—The differences in extent and population could be adjusted by the local Committee, 48271.—The Parish Committee would select twenty farmers, subject to the report of the local expert as to their capacity and industry, 48257.—Each of these men would become a kind of unpaid instructor to the district, 48274.—The same men, if suitable, should be selected for five consecutive years, 48249, 48272.—And their holdings would, under the advice of the instructor, become models for the neighbourhood, 48248, 48272-3.—Each of the twenty men selected would be expected to raise crops, and contribute a certain amount of money to the working of his own plot, 48255-6.—And would receive as a subsidy £5 in seed and manure, etc., and something on the advice of the instructor for the special labour, 48249.—This would be a sufficient inducement to follow the instruction of the Parish Committee, given through the local expert instructor, 48249.—The work of the present agricultural instructors was wasted, 48262, 48278.—As they had no definite work, but only gave advice when asked; under the new system, each would report on the twenty holdings in his district, stating what improvements were needed, and what they would cost, 48249.

HEGARTY, Rev. J. J.—*continued.*

ADVANTAGES OF SCHEME.

By this plan, the scheme for Erris would be framed in Erris, 48249.—And the agricultural instruction would be under a body that knew local wants, 48263. —The Committee members would obtain information as to the best methods, when they met on the Central Body in Erris, and would report this in their own parishes, and get the new plans tried by the agricultural expert, on the land of the most intelligent men of the parish, 48263, 48267.—Witness would rely rather on associated local effort for improvement of the neighbourhood than on a system maintained by paid officials, 48277-8.—He would have one paid official, but not, as at present, also a paid supervisor, and a secretary with a nominal salary, 48277.

RELATION TO EXISTING AUTHORITIES.

The schemes could be worked either directly by the Department or, preferably, through the County Committee, 48250.—The Parish Councils would remain under the Congested Districts Board, but, conjointly with the present Committee work, would carry on this agricultural instruction, 48259-61.

BINGHAM, Mr. DENIS G.

See pp. 52-6

WITNESS'S LAND; PRICES OFFERED FOR IT, ETC.

Witness owned 13,606 acres in the barony of Erris, 48291.—The greater part was tenanted, 48291, 48374. —He had some grass land in his own hands, which was profitable, 48291.—And was willing to sell his land, tenanted or untenanted, at a price which would give him the same income as at present (less estate outgoings), if invested in reasonable securities, 48292, 48302.—He had been in negotiation for selling his land, most of which was in Judge Ross's Court, and had been offered twelve years' purchase, 48388, 48390.—By an agent of the Court, 48388.— But the offer being insufficient, the matter dropped, 48387-8.—If he had taken twelve years' purchase, and invested the purchase money at 3½ per cent., he would have lost from 20 to 30 per cent. at least, 48391.—Roughly, a loss of 25 per cent., 48398.—He could not tell the exact loss, but it would be much more than 25 per cent., 48402.—The offer made to witness was about four years short of what would return his net income, 48399.—The bonus would be three years, 48397.—The bonus would one and a half years, 48403.—The bonus would much of it disappear in costs, 48401.—The actual offer of twelve years, with bonus, came to fifteen years, 48397.—Witness did not think sixteen years would return his net income, 48400.—If he accepted twelve years, he would lose 50 per cent., 48405.—These calculations allowed 10 per cent. for outgoings, 48391, 48405.— He would prefer to sell his whole estate and buy back the demesne, 48404.

DISTRIBUTION OF GRAZING LANDS AN INJURY TO SMALL HOLDERS.

The division of grazing lands into small holdings would probably be unwise; grazing was the chief industry of Erris; even the small tenants found grazing paid better than tillage; great numbers of store beasts were grown on the mountain and moor land, 48292.—If the large farms were sold the small tenant would suffer, 48303, 48308, 48347.

TRADE IN CATTLE.

This was because he depended on selling his cattle to persons with larger holdings, 48292, 48293, 48305, 48307, 48332.—Witness himself bought them as yearlings, 48293, 48295.—Many farmers sold young calves, 48304, 48337, 48341, 48342.—The larger holders, like witness, kept them till they were three year olds, 48292-3.—And then sold them to farmers who kept them till they were ready for stall-feeding, when they were again sold, 48292-3, 48309.—Some of the small holders had, as well as the mountain land, strips of better pasture, which much improved cattle, 48292.—And could keep their stock till two years old, as did witness, 48297-8.—Cattle did better on a large range of grass, 48299.—When maturing it was necessary to them, 48360-3.—Small holders hired grazing from witness and others, 48297, 48299.—If the small owners had their holdings enlarged, it would answer the same purpose, if they treated their land wisely, 48300.—But small owners would tend to over-stock their land, 48301, 48304, 48357-9.—If they had more land they would purchase more cattle, 48304-5, 48332, 48341.—And there would be an increased number of producers, 48345.—These men would have no market for their cattle if all the grass farms were cut up, 48305, 48332.—Even if some of them were distributed, there would be less competition to buy the small holder's cattle, 48293, 48355-6.—The division of grass lands would increase the production of cattle, and decrease the power of maturing them, 48345.—There would be an increase in supply and no more buyers so that the stock would have to be sold as young as before, 48346.—The buyers from Meath and Queen's County did not buy very young cattle, 48334.—But if a tenant had a farm of a reasonable size he could keep his stock till two years old and sell them to these Meath dealers, 48339.—The cattle are sold in September or October, for winter feeding, as was now the custom, 48334.—By the more prosperous farmers, 48335, 48337. —And this might not dislocate the trade, 48334.

TRANSIT FACILITIES AFFECTING CATTLE TRADE.

The want of competition depended on the lack of railway facilities, 48357.—If there were a railway to take fat cattle to market and bring in feeding stuffs, 48309-10.—Stall-feeding might pay, 48316-7.—The cattle might be fattened earlier, 48324, 28326.—Under the present system stall-feeding would not pay the witness, 48309.—Since there was only a small market in Belmullet, 48310.—And it was not usual to ship fat beasts to Sligo, 48311-2.—Though store cattle were walked to Ballina, sent by rail to Dublin, and thence shipped to Liverpool to the sellers' agents, 48314.—It would entail more buildings, 48318.—And growing more grass and roots, 48319.—And more labour, 48320.—Which would be easily obtainable and cheap, 48320-8.—The present system of cattle-farming, which was peculiar to Ireland, 48324.—Was a waste of time, and might be simplified by better transit facilities, which would open a better market, and raise prices, 48324-6.—But sending cattle to distant markets would entail greater expense in carriage, and introduce competition with other districts, 48327. —The land in Erris was less suitable for fattening than lands in the east of Ireland, 48322.—Fat cattle were injured by railways journeys, 48328.—But at present they had also a long journey by road, 48328.— Witness was not sure that under an artificial system of fattening, he would keep his stock a year less, he now kept them about fifteen months, 48329.—He had not himself tried to fatten cattle, 48324.—Cattle might be killed and the meat sent away by boat, but witness did not know how it was to be done, meat that he had sent to London had gone bad in transit, 48364.—The meat could be insured, but witness did not think the export of meat would pay Erris farmers under present conditions, 48365.

EVIDENCE OF MR. DORAN AND MR. FINUCANE.

Witness did not agree with Mr. Doran that the land now in the hands of graziers would carry more cattle if it were divided among small farmers, 48350. —He understood that Mr. Doran contemplated something like the Belgian system, 48378.—There would be more tillage under that system, and less room for beasts, 48351.—And there would be no competition to buy cattle, and therefore lower prices, 48356. —Also referring to Mr. Doran's evidence, witness believed his plan of fixing the price of land was fair, and Mr. Finucane's method of making the landlord fix the price was unreasonable and unjust, 48365.—Witness based this statement on Mr. Finucane's evidence before the Commission, 48368.

TWO-FOLD INTEREST OF OWNERS.

Witness thought it advisable, if the State adopted the policy of acquiring grass lands, that the owner's two-fold interest in the land should be recognised, and compensation given accordingly; tenant-rights in Erris were saleable at a high price, as much as twenty-two years' purchase, 48365.

BINGHAM, Mr. DENIS G.—*continued.*

Turbary and Kelp Industries, etc., and Transit Facilities.

It was unfortunate that in the West of Ireland all classes were dependent upon the land, and all ameliorative efforts were concentrated upon the land; in Erris there were thousands of acres of turbary bog, and now fuel was getting scarce, it was strange no Government had taken up the matter; the deep black turf of the neighbourhood was only second to the best coal, and it was untouched for miles around; roads should be made into the bogs, good drainage carried out, and facilities for sale of turbary introduced, 48370.—Germany was able to send peat-moss litter to Dublin, 48371.—The industry of kelp-raising had declined of late years; it was said, owing to a "ring" of buyers which had reduced prices and been disastrous to the dwellers on the coast, 48370, 48382.—At one time, 300 or 400 tons of kelp were made on the coast of Erris in the year, 48379.—And seven years previously the price was £6 a ton, while now it was £2 10s. to £3 a ton, 48381.—Kelp was used to make iodine, which could now be more cheaply obtained from saltpetre, etc., 48383.—If some industries suitable to the district were financed the people would be able to live in comfort; work would be available for the young people, and agitation would cease, 48370.—Witness, questioned as to whether his own tenants were driven to agitation by his practice of charging them one-third profit on the kelp they gathered, replied that this was only charged for kelp gathered on lands in his own hands, and not in the occupation of tenants, 48377.—He meant to allude to agrarian agitation, 48373.—Which he thought would cease if landlords and tenants came to terms about land purchase, 48374.—There were large quantities of drift weed and growing sea-weed along the coast, which would be a valuable manure for inland tillage if there were means of transit; the land on the coast was surfeited with weed manure, 48385.

Liming and Transit Facilities.

There was no limestone in the turbary, and bog was with difficulty reclaimed without lime, lime was abundant in Tyrawley, and could be imported if there were a railway, and large areas of cut-away bog and unproductive land made profitable, 48385.—There would be no improvement in Erris unless a railway were made to open up trade between Erris and other localities; the Government, if it financed a railway, would do more to assist the people than had been done before by all its predecessors; the barony was forty-two miles from the nearest important town; a railway thither would increase the value of cattle by twenty per cent., 48386.

Sandhills.

Witness thought it undesirable to sell land in the Mullett which largely consisted of sandhills, 48409.—To the tenantry, who would not preserve the grass which had been preserved by graziers, to keep the sand from blowing and the land from deterioration, 48410.—For the last ten years this had been neglected, though the preservation of grass was to the interest of tenants, and some means should be found of preventing it, 48411.—And preserving the land to the men who had improved it, 48410.

Labour Employed by Witness.

Witness employed eighteen men as labourers, 48396, 48406.—And if he were deprived of his living these men would lose their employment, 45394.—Some of them were his own tenants, and some tenants of adjoining landlords, 48407, 48409.

Case of negotiations with Estates Commissioners.

Witness knew of case in which an arrangement was made between the landlord of an evicted tenant and the Estates Commissioners, that the tenant should be re-instated at sixteen years' purchase, with one year's rent; this was inconvenient to the landlord, since he wished to sell the whole estate, in which this was one holding out of forty; he agreed, and when preliminary arrangements were made, the Commissioners brought the negotiations to an end on the plea that the holding was uneconomic, though their own inspector had agreed to the price, 48386.

BINGHAM, Mr. DENIS G.—*continued.*

GALLAGHER, Mr. JOHN.

See pp. 56-8.

The Congested Districts Board and its Tenants.

Witness believed that improvements were better done by the Congested Districts Board than by the tenant, 48413.—But the Board should hold the land for a limited term, 48416.—The land should be transferred as quickly as possible, to set the Board free for further purchases in the district, 48419.—It was exasperating for tenants paying full rents to see the tenants of the Board for a number of years practically paying no rents, owing to the reductions made, but deriving an income from game and fishing rights, 48416.—Which was bought from them by Mr. O'Brien for a lump sum, paid to each tenant yearly, 48417-8.—This occurred in a townland called the O'Hara Dease Estate, once worthless, and transformed by the Board into the most comfortable townland in the whole district, 48413.—Witness believed, but did not know absolutely that this was bought at 10¼ years' purchase, 48414.—The rents had never been regularly paid, which might account for the small price, 48414-5.

Game Rights.

Witness considered, in the event of a transfer of property, that the game rights should be vested in the tenant, 48428.—It was now jointly preserved by the landlord and tenant, 48428.—The landlord never had full game rights, 48431.—Witness was aware that if the tenant exercised game rights, it would, by the Land Act of 1881, enable the landlord to take the tenant-right of his holding; but in another section the tenant was protected against trespass, 48432.—By the law of the land, the game might belong to the landlord, but by the law of nature, it was the tenants, 48431.—In the event of a sale, the landlords' right might be held, 48428.—Disputes about game caused endless troubles, 48428.—Much damage was done by persons in search of game and fishing, throwing down fences, 48428, 48433.—And if the tenants were peasant proprietors the land would be more valuable to them if no one else had rights over it, 48428, 48433.—The question of game entered into bargains between landlord and tenants, 48435.—And if the game passed to the tenant, he paid for it, 48436.—The terms varied, 48437.—Witness thought that if the landlord were deprived of game rights, the State should pay him, 48434.—Not the tenant, 48430.—The law should be so amended that the tenant could not be left without game rights, 48438-9.—Commissioner O'Brien had refused to sanction the sale of the Dillon Estate, because the tenant was not to have the rights, and had said that when a man became a tenant purchaser, no one should be allowed to come on to his land, 48438.—The matter could be arranged, by vesting the game rights in a public authority, 48840.—Or a committee of the tenants, 48841.—It was not so important to make a profit to the tenants as to prevent people coming over their land, which would be a matter of agreement, 48442-3.

Lime.

Witness was glad to hear from Mr. Scanlan that there was lime in the district; there was also excellent limestone in the eastern part of Erris, along the Owenmore river, three miles east of Bangor; witness had recommended that funds to the credit of congested districts should be spent in testing these quarries; this had been adopted by the County Committee, but was not sanctioned by the Department of Agriculture, 48419.—Witness thought it strange that a unanimous suggestion of the County Committee should be disregarded, and hoped that the Commissioners would make it incumbent on any authority remodelling estates, and re-distributing holdings, to make provision for obtaining lime, 48419-20, 48422.—Witness

GALLAGHER, Mr. JOHN—*continued.*

had approached the Congested Districts Board on the matter, but believed that they had replied that the matter was transferred to the Department of Agriculture; in every case, the reports of the Agricultural Instruction in Ireland had dwelt on the necessity for lime, 48422.

Mr. Bingham's Evidence on Distribution of Grass Lands and Cattle Prices.

Witness disagreed with Mr. Bingham's statement, that multiplication of the number of tenants would lower the price of store-cattle; if every acre of Erris were occupied (as it ought to be) by tenants on economic holdings, the price of cattle would be unaffected, for the cattle reared in Erris was a negligible proportion of the whole supply, 48423.—The same process would, no doubt, go on all over Ireland, but if it had tended to affect the price of cattle, that effect would be already observable, 48423.—The same thing would not be likely to happen throughout Ireland, but even so, every grass holding sub-divided and sub-let would carry not only more cattle, but more inhabitants; this was supported by figures collected by witness, as to the population, and number of cattle on his own townland, compared to townlands under grazing, 48424.

Division of Grass Lands and Migration.

If the grass lands were distributed, the thing should be put on a broad basis, and people should be restored to the lands from which they had been driven to wet and barren districts; witness had heard that people from Erris would be unwilling to migrate to Roscommon; this was untrue; he himself was willing to go; people from Erris went much further afield; those who were not too old, or specially incapable, would go, if there were a definite migration scheme to put before them, 48425.

Agricultural Banks.

Witness, in his own experience, as Secretary of an Agricultural Bank, knew them to be a great benefit, but he thought they should be put on a sounder basis, by being attached to a system of land purchase, 48425.—They were now really governed by the Irish Organisation Society, which was subsidised by the Department of Agriculture, 48425.—The business was now carried on in a school-house, by a Secretary with a nominal salary (witness himself did not draw his salary); if the Bank were directly subsidised by the Congested Districts Board, and a house hired, and Secretary paid by that body, depositors would have more confidence, 48427.—The Board might advance money for people to repay their annuities, 48427-8.

M'HALE, Mr. JOHN.

See pp. 59-64.

Acreage, Population, Valuation of Westport Union.

Westport Union contained 347,819 acres; the population was 34,672; poor law valuation, £45,069; in twenty years the population decreased by 3,593; in fifty years the number of houses by 8,012; this was chiefly due to the Marquis of Sligo, Sir Richard Annesley O'Donel, and the Earl of Lucan; their tenants, though the majority owed nothing, were replaced by English and Scotch settlers; great distress prevailed amongst the evicted tenants during Famine and after, 48444.

Land held by a few Graziers.

Hence arose land monopoly; sixty-six graziers held 98,790 acres, and thirteen landlords held in fee 52,145 acres for grazing alone; all these graziers were non-residential; there were 4,089 occupiers, whose valuation ranged from £1 5*s.* to £8; about 52,000 acres were held by graziers on the eleven months system; according to statement made by Assistant Clerk of the Union in 1902, the valuation within its area was about £1 per head; were the land rightly distributed each person would receive ten acres; one grazier alone, Mr. Houston Boswell, an Englishman, occupied 24,763 acres within the Union; this land, at

M'HALE, Mr. JOHN—*continued.*

the Killeries, was partly arable, and a great deal was mountain and bog; Mr. Boswell bought bullocks and grazed them here; he lived in London, and only came to Ireland occasionally to visit his stock; he had held most of the land about thirty years as tenant of Lord Sligo, probably under lease, 48444-55.

General Poverty.

The average at Carrowbawn was ten and a half acres amongst twenty-three tenants, and the average valuation was £2 12*s.*; at Carnalurgan the average was nine acres amongst eight tenants, and the average valuation was £1 6*s.*; the same system prevailed on the Sligo Estate, *e.g.*, at Lettermaghera, Shramore electoral division (Westport Union), where forty families existed on a valuation of £60—an average of £1 10*s.* per family—the system was rundale: one man valued at 14*s.*, had patches of land in sixteen places; Lord Sligo held most of the cattle-ranch of nearly 12,000 acres, 48455-60.

Migratory Labour.

There were, in all, in Westport Union, 4,089 occupiers rated at or under £8; these, out of 5,322 families, *i.e.*, about 20,000 persons, had holdings below subsistence point; they were consequently dependent on relatives in America, or on annual migrations to England and Scotland, where they worked as labourers; cheap trains and boats were run for this purpose, 48448.

Emigration.

The flower of the population emigrated to America; since 1851 probably over 30,000 families had left the union, 48448.

Stoney Estate.

About seven years ago the Congested Districts Board bought the Stoney Estate at a reasonable price, 16½ years' purchase; six or seven years later this, including 2,000 acres of mountain land, had been re-sold to Mr. Stoney at a nominal price; this caused distress to tenants, as the Board had allowed them to graze their cattle there at a nominal price; the tenants were very poor, and had fully availed themselves of this privilege, 48461.—The quality of the mountain was bad, but sometimes, for months, mountain grazing was as good as arable for fattening purposes, and it seemed as though the position of this land, running parallel to the tenants' holdings all the way, might have permanently accommodated the people if allowed for three months of the year; the mountain was now used as a game preserve, but Mr. Stoney let some of the tenants graze cattle there, 48461-77, 48496-7, 48536-9.

Sale of Rossyvera Arable Farm.

When the Board sold the 2,000 acres of mountain, it bought from Mr. Stoney an arable farm of 200 acres, called Rossyvera; the Board agreed to pay an enormous price; witness admitted it was usual for the Board to sell a mountain for £600, in order to get arable land for about £7,300; Rossyvera might not have been paid for at once, but if not, was now in course of being paid for; the Board might or might not have it on their hands now; operations had been begun on it immediately; but these had been suspended after twelve months, as the title to the farm had been disputed by Mr. Stoney, in the interests of his brother, Colonel Stoney; the farm was now being used for grazing by the people of the district; the land was good and would greatly benefit the people if secured to them, but it need not have been bought so high; opinions differed as to whether the Board had done wisely in the transaction with Mr. Stoney, 48479-93, 48498-9.

Suspicious Circumstances in Connection with Sale.

The transaction appeared to have been made in Mr. Stoney's interest; Mr. Stoney might have made the re-selling of the mountain a condition of the Board's getting Rossyvera, but witness thought this could not have been enforced; Mr. Jones, the head landlord, had said he would be glad to sell the farm, and he regarded Mr. Stoney simply as a middleman;

M'HALE, Mr. JOHN—*continued.*

it was a suspicious circumstance that a former steward of Mr. Stoney's should have been appointed Assistant Land Commissioner for the Board; witness believed he made a report and measured the place, and though this had been done with his chief's (Mr. Doran's) consent, that he had greatly favoured Mr. Stoney; witness admitted that this was only an impression, 48488, 48501-14, 48526.

Enlargement of Holdings Needed.

Small owners would be chiefly benefited by adding good land to their holdings; a number should be migrated to better lands within the Union. There was enough grass land to supply both local needs and the wants of many outside the Union, 48527-32.—Part of the land was good, part intersected with rivers; much was rough mountain land, only needing a little reclamation, 48533-4.

Newport Workhouse.

Newport Workhouse, a modern building, erected at cost of £13,000, was bought at public auction by the Congested Districts Board for about £600; Newport and Wesport Unions had been amalgamated, owing to the high rates prevailing, and the building had consequently become useless, 48539.—The people thought it might now be used for some reproductive purpose, *e.g.*, a bacon or woollen factory, 48554.—It was near a quay, a railway, and a powerful waterfall; there was a large enough population for mill purposes, although the fever hospital and such like buildings were being pulled down to improve farms and utilise the stone. It was a matter of opinion whether this factory scheme would pay, 48558.—There was little or no private enterprise in Ireland, but the Board had the plan under consideration, 48559-73.

Work of Congested Districts Board.

The Congested Districts Board had done little for Westport Union beyond purchasing a few hundred acres; these were bought too high, and it was doubtful whether the tenants would ever be able to meet the instalments, 48461.

Suggestions for Re-constituting Board.

The Board should be made more representative, and some of its members should be elected from public bodies, *e.g.*, County, District, or Urban Councils, with compulsory powers for acquiring land for the relief of congestion. The members lived chiefly in Dublin, and did not sufficiently know the country's needs; the County Council would know them; each county should have at least three or four members to represent the people accurately; there were three electoral divisions in Achill Island, Achill, Duagh, and Slievemore; of these Mr. Lavelle, now in Dundrum Asylum, was the principal representative on the Rural District Council; even two representatives on the Congested Districts Board would be an improvement, admitting that more might hinder consecutive knowledge and discussion; the Chairman of each County Council should nominate the members, with power to replace them should they fail to secure advantages for their own localities; counties like Donegal and Mayo, which were represented on the Board, were better looked after than other counties, 48617-37.

Fishing Industry.

The fishing industry along the western coast was neglected for want of proper pier and harbour accommodation; the piers at Lecanavey, Mulranny, etc., were useless, because not built far enough out to sea; extra piers at Achill, Dooega, Rossnewrevagh and other places, and the utilisation of Mulroy as a harbour for fishing boats, would probably encourage and improve the industry; witness did not think the Government had taken any action in regard to Mulroy Harbour, 48580, 48582-4.—A siding might be made near Mulroy Pier by the Midland Great Western Company; at present fish had to be carted as many as four or six miles to Achill Sound Station; in order to develop the industry round Achill, boats were needed for deep-sea fishing; a loan might be advanced at a limited rate of interest and repayment to buy these, also gear and carts; the people were a

M'HALE, Mr. JOHN—*continued.*

fine, hardy race, and, granted facilities, would make a good fishery; the safest place of anchorage would be Roigh Harbour, 48581, 48585-9.

Railway and the Fishery.

A railway was necessary for the development of a fishery, but that to Achill Sound had not succeeded well in this respect, owing to the people migrating when the mackerel fishing ceased. The people were poor, and the coast fishing was not good, 48592-7.

Lobster Fishing Industry.

There was a plentiful supply of lobsters, but it was not thoroughly fished; it was a "small boat" business, requiring no capital, and witness thought the railway had increased the industry; the lobster fishing was not as good at Achill as at the Island of Inniskea, and the Achill people were not so well trained; if they had instruction they would be more energetic, 48603-16.

Act of 1903 compared with Ashbourne Act.

The Act of 1903 had done no good to tenants in the Union, owing to the exorbitant prices demanded by landlords, whereas before, when the Ashbourne Act was in force, prices had been comparatively reasonable; Colonel C. H. Knox, Creagh, Ballinrobe, had then offered to sell a part of his estate to his tenants at eighteen years' purchase; Mrs. M. A. T. O'Donel had offered to sell at sixteen, and the late Victor C. Kennedy at thirteen years' purchase; Mr. M'Donald, of Dublin, had bought the Symes Estate at twelve years' purchase, but none of these offers had been accepted by tenants; Lord Sligo had offered to sell at eighteen years' purchase; the Congested Districts Board, after selling the estate, had offered to buy at sixteen years' purchase, and the sale had fallen through; it was unlikely that Lord Sligo, under the new Act, would now sell at less than 24½ years' purchase, 48637-45.

Compulsory Purchase.

The only method of settling the Land Question in the West of Ireland was by compulsory purchase, and by an Act of Parliament forcing a landlord to sell at a reasonable price; his net income, after deducting the usual outgoings, might be taken as regulating the price he should receive, 48645-7.

Prices of Agricultural Produce.

Agricultural produce had greatly fallen in price within the last few years; the potato crop had lately been entirely lost; cattle rearing might pay the tenant farmer; but the average holding in the Union was worth so little, because of its smallness, that a man could not live on it even rent free; the average valuation was about £2 or £2 10*s.* a holding, and there were holdings on the Stoney property rated as low as 14*s.* 6*d.*, 48639, 48648-52.

WALSH, Mr. JOHN.

See pp. 65-7.

Westport Union—Population, Valuation, and Acreage; General Poverty.

Westport Union, although called congested, was really very sparsely populated; the Land Acts had produced no great improvement in the condition of the agricultural population, as the landlords had already cleared the tillers of the soil off all the good land; the Union had a population of 37,381, and a valuation of £43,961, being at the rate of a little over £1 per head; its superficial area equal 347,819 acres, making nearly ten acres per head; of a total of 5,322 rated occupiers, 3,041 were under £4 valuation, and 1,048 more were rated from £4 to £8; of the remaining 1,233 occupiers, 500 were barely removed by one degree of poverty above the others; out of 5,322 families there were 4,089, *i.e.*, about 20,000 persons, who were only kept from starvation by the earnings of relatives in America, or by annual migrations to England and Scotland, 48656, 48677, 48682.

WALSH, Mr. JOHN—*continued.*

Migration and Emigration.

Special cheap trains and boats were run to assist the annual migration of men to work on farms and in mines and iron-works, 48682.—The total emigration from this county since 1851—the emigrants being almost exclusively young people from fifteen to thirty-five—had been 164,589; and from this Union alone the emigration had exceeded 30,000 in fifty-six years, 48682.

Deterioration of Land owing to Depopulation.

The result of this depopulation was to deprive tillage-plots of the care of almost all the male agriculturists; rotation of crops was neglected and land becoming more and more incapable of proper cultivation; potatoes, their staple crop, only yielded an average of 2·83 ton per acre in 1900, as against 6·05 tons in England; potato famines had only been averted the last few years by the invention of the Bordelaise spraying-mixture, which involved an addition to the cost of cultivation that in many cases absorbed the reductions of rent obtained by small holders in the Land Courts, 48684.

Land held by Graziers.

In 1901, cereals and green crops were only cultivated on 93,681 acres in a county of 1,327,000 acres, while 644,463 acres were devoted to cattle; only 15,000 of the 347,000 acres in Westport Union were used to raise food for the people; 150,935 acres, chiefly evicted land, were monopolised by graziers, 48684.

Land held by Landlords.

It was important to note the amount of land held by landlords in the district—Marquis of Sligo, 27,402 acres; Earl of Lucan, 382; Sir Roger Palmer, 218; W. C. Kennedy (London), 3,439; R. V. Stoney, 4,223; Thomas O'Donel, 2,495; Mrs. Cline, 288; Bellingham, 8,955; Pat O'Dowd, 305; Mary Pike, 1,533; Agnes M'Donnell, 1,530; F. C. Garvey, 284; Gibbings, 1,091, 48685.—Witness admitted that these lands were partly untenanted, containing rough mountain and bog; there was not much bog in Union as a whole; there was more rough than arable land; but there was much good land about Newport to Westport, 48686-90.

Scheduled areas of good Land.

The following good land was scheduled:—Robert Gibbons, Westport, 221 acres; W. Hobson, Westport, 374; Exham Morony, Belcarra, 734; Hawkshaw, Ayle, 315; W. P. O'Malley, Louisburgh, 353; A. H. Boswell, London, 24,763 acres of land; this last was a mountain, principally grass, but there was good arable land here and there; also in Durma district about Louisburgh; Lady Wilbraham, 572 acres; Patrick Joyce, 262; A. M. O'Malley, 286; Robert Powell, 106; T. F. Joyce, 2,373; Pat Fahey, 1,194; James Hawkshaw, 81; E. King, 134; Thomas Bourke, 306; James Action, 65; F. Mulholland, 429; Captain Laprimandaye, London, 10,064; most of this last might not be arable, but the graziers had always had the pick of the land; in the list given there was some coarse, but most was arable; witness had only the valuation of the whole *in globo*, 48690-4.

Enlargement of Holdings and provision of Land for Sons of Farmers needed.

The operations of the Congested Districts Board were beneficial, but too slow; they seemed unable to provide holdings for young people, sons of tenant-farmers who were forced to go to other countries, although there was sufficient land for at least most of them within the Union, 48656-61, 48687.—It was more important to first enlarge uneconomic holdings; even in fairly good years the normal condition of farmers was one of poverty; they should be made owners of the good lands, and then their sheep, cattle, and pigs would consume their crops, and thus fed, would fetch prices in the open markets which could not be beaten by the grass-fed importations of other countries, 48662-3.

WALSH, Mr. JOHN—*continued.*

Compulsory Acquisition of Waste Lands advocated.

The enormous tracts of waste lands consisting of bog and sometimes grass in the Union should be compulsorily acquired (through companies or otherwise) and turned into arable land for the benefit of farmers; this had been recommended by the Devon Commission in 1845, and by Select Committees of the House of Commons from 1810 down to time of Devon Commission; the work of reclamation would profitably employ the labourers and small farmers of Ireland for the next twenty-five years, while providing a permanent means of existence for at least three times the present agricultural population; agriculturists should have the right to serve notice claiming land used for pasture for the more important industry of agriculture, while the Land Commission should have the power to stake out from grazing-ranches so much land as the claimants could farm as agricultural holdings, for landlords would not sell unless compelled, 48663-5, 48696.

Fishing Industry—Lack of Piers and Harbours.

Westport Union lay along almost forty miles of seaboard, but the fishing industry was not worked to advantage for want of proper piers and harbours; there was not even sufficient fish brought in for the people of the coast; these in winter relied chiefly on inferior Scotch herrings; in certain seasons fishing was impossible, 48665.

Inadequate Pier Accommodation at Clare Island.

Three years ago seed potatoes had been sent to Clare Island; the boat had gone within a hundred yards of the pier, but had been forced by a rough sea to come back eighteen miles to anchor; when she had returned later, the people had been obliged to wade thirty or forty yards into the water to fetch the potatoes; witness had not much personal knowledge of Clare Island; the situation there seemed to have greatly improved since its acquisition by the Congested Districts Board; the people sent their stock to the mainland in one of the Board's steamers; they could not get stores on or off the steamers by going alongside the pier, except at high water, 48665-76.

GREALEY, Very Rev. Canon.

See pp. 67-74.

Land held by Graziers in Newport West, Newport East, and Shramore Electoral Division.

The grass ranches in Newport West, held by a few graziers, exceeded in value by £165 12*s.* all the land and other hereditaments held by 260 tenants, 48701.—In Newport East, valued at £786 15*s*, the grass ranches held by a few exceeded in value by £313 14*s.* all the land, etc., owned by 195 tenants, 48703.—In Shramore Electoral Division (where no agricultural tenant was valued as high as £10), the ranches exceeded in value all lands, etc., of agricultural tenants by £315 6*s.*, 48705.

Land of Congested Districts Board in Chancery.

The Congested Districts Board had about 1,200 acres of untenanted land, but 600 acres had been in Chancery for twenty years past, 48883.

Former Times Contrasted.

The grass lands of these districts were fast deteriorating from lack of cultivation; in Newport East, for want of drainage, etc., agricultural holdings were flooded, and so unfit for crops; in most large tracts of the best land not even a vegetable garden was under cultivation; large landholders should be compelled to keep a proportion of land in tillage, and all from deterioration, 48701-5.—There was as good land for corn, wheat, and oats in Ireland as anywhere; once hardly any bread-stuff had been imported in Mayo; every householder had had his own meal, linen, wool, and plot of flax, and the people had manufactured their own clothes—friezes, flannels, tweeds, towels, sheeting, and shirts, 48735-6.

GREALEY, Very Rev. Canon—*continued.*

Evictions—Shramore, Newport, and Islands of Clew Bay.

The tenants of Lettermoghera (Shramore), though not owing a shilling's rent, had been evicted by Lord Sligo, who wanted their fine pasture and arable lands for game; in Newport parish the natives had been cruelly and systematically evicted from the good land; they had been deprived of from ten to twelve miles of mountain, mostly fine pasture, and had been driven from the Islands of Clew Bay into marsh, bog, and mountain; the islands produced a rich crop of sea-weed (a fertilising manure), and were also good for grazing, while parts had once been cultivated by the people; they would be excellent for the enlargement of holdings on the mainland, 48705, 48720, 48723-31.

General Poverty—Neglect by Public Boards.

There was great poverty in all three divisions; in one district Lord Sligo had eighty tenants with an average valuation of £2 5*s.*; in Lettermoghera he had forty tenants whose valuation, everything included, was £60—taking land alone, probably about £1 per head; a man from there had stated his as 10*s.*, and his one acre was in fourteen places; in another village of Lord Sligo's each holding was valued at £2; Shramore was congested, neglected, and inaccessible; roads, bridges, and drainage were needed, but public boards did nothing for its relief, 48701-7, 48720, 48722.—The natives of Newport parish generally lived miserably by hard toil, or died of disease and hunger; flax, oats, and wheat had been grown there extensively, but the land of the evicted tenants was too poor for wheat or flax, and oats had deteriorated, and were now for the most part only fit for cattle fodder, whereas once 2,000 tons of oats had been exported annually from Newport-quay—the natives being first fully supplied with excellent meal for their own food; now oats was often brought from Glasgow to feed the few remaining horses, 48731.

Migratory Labour.

Most of the men of Newport East, Newport West, and Shramore were forced from lack of employment to migrate to other countries for support of their families; children of nine and ten, instead of going to school, were made to help pick potatoes in Scotland; people of Inniskea, Connemara, and Clifden went as far as Leitrim and Sligo lobster fishing, and were from home all summer, 48701-5, 48778, 48889.

Emigration—Dilatoriness of Board.

During the last twenty-four years 168 families had left for America; for fifteen years there had been no emigration of whole families from the parish; their expectation of getting new and better land being disappointed owing to the dilatoriness of the Congested Districts Board, they had had during the last three years to emigrate; most of these families had been well off, one man, an evicted tenant, leaving with £500, made by herding and by picking periwinkles on the shore; an intelligent, well-educated family like his should have been helped by the Board to stay in the country; his money should not have debarred him from a free holding, 48743-58.—The exorbitant prices given by the Board for small holdings encouraged emigration; Myles Kilcoyne, valued at 17*s.*, had received £22 for his interest; some emigrants left their land to relatives, stipulating to get it back if they returned in three years; certainly small holdings fetched big prices, but no one would buy 17*s.* worth of land, except to add to another holding, and for that he would give four or five pounds; emigrants returning with money would offer as much as sixty years' purchase of land, but only for reasons of sentiment; there was a house on Kilcoyne's holding, but £5 or £6 would have been too high a price—it would not have fetched more in open market; another tenant in Murrivaugh had paid £11 for interest in a holding for which, without improvements, the Board had given him £52; the rent was £3 10*s.*; but rent was no test of land value; some of Mr. Stoney's tenants paid from £9 to £10, and land once worth £12 was now £3, with the reductions under the Land Act, 48796-8

GREALEY, Very Rev. Canon—*continued.*

No Reduction in Rents of Certain Tenants of the Board.

In 1898 or 1899 the Board bought (under Ashbourne Act) the tenants' lands on Mr. Stoney's Rosturk Estate at 12½, and the Islands (on same estate), untenanted, at 15½ years' purchase; till now the tenants had had to pay the old rents; they had the improvements, for making which they had been paid, but other tenants, *e.g.*, Lord Dillon's, had been given 6*s.* 8*d.* in the pound reduction, when the Board bought his estate, 48800-09.

Stoney Estate—Suspicion of Underhand Influences.

The Board gave £800 for 2,500 acres of untenanted mountain on the Stoney Estate, and in 1905 re-sold 2,000 acres (the best part) of this to Mr. Stoney for £600; the congested tenants had 500 acres of bare rock for enlargement of their uneconomic holdings at £200; considering Mr. Stoney's portion was good pasture, and theirs the reverse—considering, too, the inflation in the price of land under the Wyndham Act, the Board should have got £1,200 for the 2,000 acres; these had been as valuable to the tenants as all their eleven holdings put together, and should not have been re-sold at any price; sheep could be reared there producing sufficient wool to clothe the people; witness believed the Board had allowed sheep and cattle grazing there at 18*d.* per head, and had heard this was more than had been charged before, when a part had been grazed; the people complained, and it was thought free grazing would not have been a great concession; witness believed Mrs. Pike, of Achill, charged 1*s.* per head; from 1891 to 1894 the total amount paid by tenants to the Board for grazing was £35; perhaps the people had not used the mountain much; some had no cattle or sheep, but these often let their holdings for a year or two until their families could earn money, and they became prosperous afterwards, 48809-20, 48840-1.—It was not true that it had been necessary to re-sell the mountain to get land elsewhere from Mr. Stoney; as lessee, he had no right to sell without the landlord, Mr. Jones; and both long before had expressed willingness to sell this land to the Board at a fair price; the valuation was £131, the price paid £3,973. —Over thirty years' purchase; witness did not know the valuation of the mountain, but the people would rather have given £3,000 for it (especially considering its convenient position) than for the 150 acres exchanged, 48834-9, 48842-7.—The Board had wasted money by paying in part for fencing the mountain; the law compelling two tenants to divide expense of bounding their properties should in this case have been disregarded; witness was not sure if the whole mountain had been fenced, but only its re-sale had made any fencing necessary, 48821-33.—It was thought that underhand influences guided Board's operations; one of their agents, Mr. Vereker, had been agent for Mr. Stoney's and for several other estates in the district; his social relations with the landlords caused his impartiality in land transactions to be questioned; possibly Mr. Doran, and not he, had been responsible for the Stoney Estate transaction, but there had been much confusion since his appointment; for example, the Board had been given the right of way through Sir Roger Palmer's property by Mr. Stoney, and had been stopped by the latter's brother (claiming the tenant-right) and Sir Roger's agent, 48847, 48886-8.

Prices Given by Board for Land.

The Board bought the Kilbride farm (valued at £87) for £1,800, *i.e.*, twenty-seven years of the valuation plus the bonus, but this was fair, as the land was good, untenanted, and well placed. Mr. Curran's Estate, bought in 1888 for £1,500 (valuation £117), was bought by the Board in 1905 for £4,000, *i.e.*, 35 years' price on the valuation. The new tenants could not be expected to pay the annuities required to meet principal and interest; landlords might have refused to sell other grass lands of the district cheaper, but it was better not to buy at all than give such prices; Mr. Doran had bought the tenant-right of some lands at a moderate price on advice of witness, but lately had not consulted him, 48847, 48854-8.

GREALEY, Very Rev. Canon—*continued.*

Newport Workhouse—Suggestion for making into Agricultural College.

The costly Newport Workhouse, now neglected, should be utilised by the Congested Districts Board, or by the "Department." The demolition of the dead-house, fever annexe, and certain out-houses would not interfere with the main building; adjoining it were 400 acres of land, and there were a railway siding and pier at Newport; an Agricultural College, with experimental farm, might be made—the rest of the land used to extend holdings; the College could be attached to some of the National Schools, and one skilled teacher might teach six or seven parishes, giving each one full day a week; men could only learn agriculture when young, 48868-77, 48884-5.

Fishing Industry—Proposed New Harbour.

Many of the piers built had been proved worthless; little piers might be built at Doobeg, Murrivaigh, and Killeen, for fishing, seaweed and turf supply to the islands and coast villages; though a harbour was essential to the development of Clew Bay fishing, the proposed expenditure of £100,000 on Innislyre seemed too great; apparently that project had been abandoned; the proximity of a railway made Roigh the best place for a harbour, 48877-83, 48883.

Picking Shell-fish a Remunerative Industry.

Some of the poorest people had, unassisted by Government, become wealthy by selling shell-fish from 1*s.* to 15*d.* a stone; a family could soon pick a cwt., but only at the high spring tides; the fish were sent to Manchester, Liverpool, and London in cart-loads; the railway had greatly developed the industry, 48772-7.—Rocks, seaweed, and a not too rough sea were necessary to a good lobster supply; these conditions did not prevail at Achill, but people came from a distance to fish there, 48777-8.

Compulsory Purchase and Acquisition of Land Advocated—Refusal of Lord Sligo to Sell to Tenants.

There should be compulsory acquisition of land; twenty years before Captain Laprimandaye had offered to give land to the Lethermoghera tenants, without compensation, at the rent he as lessee paid Lord Sligo, and the latter had not consented to the sale; Captain Laprimandaye had asked the Congested Districts Board to dispose of his interest, but, even since the Act of 1903, Lord Sligo gave various pretexts for not selling; eighteen years ago the Shramore tenants had tried to buy their holdings at ten years' purchase from Mr. Simes' representatives, and Lord Sligo had refused to sell his interest, and, therefore, the Land Commission had not been able to advance money; a Mr. Stanuell, of Dublin, had bought the estate very cheap; the Mayo landlords and great territorialists were equally unwilling to sell; from time to time there were tenants' interests for sale, but the landlord had a veto, 48705-20, 48759-63.—Good land should be given the people, and the Congested Districts Board should build mills for the corn grown on it, 48731-5.

Improvements Needed in Constitution of Board.

The Congested Districts Board was composed largely of strangers, and was too much in the hands of paid officials, who had not the confidence of the people; the Congested Districts should send as members natives conversant with their needs; the Board sessions should be held in these counties, time and place of meetings published beforehand, and members of County and District Councils invited to come and advise. There should also be an advisory Board in every congested county, *e.g.*, the District or County Council, who would send their views to the Secretary for consideration; whole counties, like Galway and Mayo, should not be left in the hands of a few officials; were the people consulted there would be no need for coercion and so forth, 48856, 48859-67.

DORAN, Mr. HENRY.

See pp. 74-7.

Stoney Estate; Justification of Transaction.

Witness alone was responsible for the transactions of the Congested Districts Board with Mr. Stoney; when Mr. Vereker had been made assistant agent to the Board, it had been arranged that he should have nothing to do with any negotiations concerning estates for which he had once been agent; the statement that he had not been discharged by the Land Judge as receiver, on entering the Board's service, and had not had payment of any kind for his receivership when discharged in 1905, referred to the O'Donel Estate, not yet bought; no part of the Stoney Estate had ever been in the Land Court, and Canon Greeley might have informed himself accurately, 48891-5.—On the Stoney Estate, bought by the Board, was a mountain; Mr. Stoney had formerly put stock on it for four shillings at a time, and anyone could graze an animal on it for so much a month, but the tenants as a body had had no grazing rights there; the Board had let them graze it at a nominal rent, but witness thought the largest number of stock put on it at any time had been about thirty, and the average rents about £8 to £15 a year, for the four years the Board had had it; very few tenants had stock, and though in some cases the Board had offered loans to buy this, they said they had too much rough land already; the mountain could only be used three months in the year; and more arable land was needed in order to feed the stock in winter; the Board thought this reasonable, and at length induced Mr. Stoney to sell an arable farm, which he had hitherto refused to do, chiefly because his farming operations would be too contracted; he had sold only on condition that the mountain should be re-sold him for a game park; it might have been well to keep the mountain had the tenants had it free, but the Board did not give land for less than they paid for it, 48898-918, 48933-4.—The Board had paid £600 for the mountain, and had received for it—less 300 acres—the same sum in cash, refusing to have the sale through the Land Act; the £800 mentioned by Canon Greeley referred to a sum including other holdings, 48918-21, 48946.—The Board had only paid for half the fencing of the mountain on the south side, and had had nothing to do with Mr. Stoney's building of the fence to the summit, 48947-8.

Emigration; Reply to Charge that Emigration was encouraged by Dilatoriness of Board in Disposing of Land.

The reason for the Board's delay in disposing of land was well-know to tenants, most of whom did not complain; they had not lost a single opportunity of buying land in Canon Greeley's parish since the purchase of the Stoney Estate; here there had been 170 tenants, the valuation of whose holdings was £1 6*s.* 8*d.*—a holding of 30*s.* might be held in twenty patches; the Board thought if the people had these holdings free, their position would not be substantially improved, and that the only remedy was to get more land and as near as possible; the Board had bought the tenant-right in comparatively large grass farms on the O'Donel Estate, in anticipation of buying the fee-simple of the estate; some people complained that one of these, Derrylahan, should have been in the Board's hands seven or eight years, but they knew that the Board, as a judicial tenant, could not stripe up these lands till they had become owners of them in fee; they had approached Mr. Stoney at different times, in hope of getting the fee for his grass farm near Rosturk Castle, 48897-8.

Amount given for the Kilcoyne Holdings Justified.

It was not true, as stated, that the Board had been responsible for the emigration of either Miles or Patrick Kilcoyne; the former had lived with his wife, son, and daughter-in-law, on a holding of which the rent (exclusive of the house) was 31*s.*; the son was delicate, and under medical advice had decided to go to America, where a brother and three sisters were living; the old couple resolved to go too, and wished to sell the interest on their holding; the Board, knowing this, offered Kilcoyne £22—a reasonable price for four acres with bog attached and right of commonage

DORAN, Mr. HENRY—*continued.*

on the mountains; the holding, being in thirteen divisions, could be given to adjoining occupiers, and witness considered the purchase a wise precedent on the Board's part; no pressure had been put on Kilcoyne, except the offer of £22, 48922-32.—The case of Patrick Kilcoyne was as follows: John Kilcoyne had bought the interest of a holding for £11, with £6 10*s.*, and £4 for an adjacent cabin, arrears of rent, from a gamekeeper, Purvis, who had been glad to be rid of it; the Board could not take advantage of Kilcoyne's luck, and offered him £52 for his interest in the holding, considering this, *i.e.*, about fifteen years' purchase on a rent of £3 10*s.*—a fair price; only £13 had actually been paid, for they had stopped the rent due; Kilcoyne had bought another holding from an uncle, Patrick Kilcoyne, who had emigrated, but the Board had had no dealings with the latter, 48944-5.

Consulting Local Opinion.

The agents had to work regardless of outside opinion but witness was always ready to hear the views of anyone interested in the districts concerned; personally, he had not intended to ignore Canon Grealey of late years. Doubtless, Mr. Vereker's self-respect had made him do so, considering the Canon's attitude towards him, 48936-8.

"Agitators."

An agitator was a person who spent most of his time creating disturbance in the sphere in which he moved—as a rule for personal ends; Canon Grealey was not in this category, but there were a good many agitators in Mayo, 48897, 48939-42.

O'DONEL, Mr. E. THOMAS.

See pp. 78-80.

Condition of Island of Achill.

Rents had been well and punctually paid on the Achill Mission Estate during the several years of witness' agency up to 1880; the population had increased in recent years, 48950.

Migration and Enlargement of Holdings Unpracticable.

Achill, composed almost entirely of mountain and bog, was not suitable for migration purposes or for the enlargement of small holdings; it would be beneficial to the community if some of its members would migrate to better holdings elsewhere, 48950, 48953-4.—Witness did not think there had been much emigration from the island, but there was emigration to England and Scotland, 48951-2.

Development of Fisheries and Extension of Railway Advocated.

The fishing industry had developed, and more people had been engaged in it since the building of the railway by Mr. Balfour; the Congested Districts Board, too, had largely encouraged the industry; the railway line should be extended from Cleggan Ferry to Belmullet, as that large and important district was now cut off from railway communication; the number of boats seemed to have increased, because there was now a flourishing lobster trade with England which had been made possible by improved means of transit; this trade might also be further developed, 48954-8.

Mrs. O'Donel's Estate—Inaccurate Statement made by Mr. M'Hale.

Mrs. O'Donel was ready to sell a fair-sized estate, including a substantial area of good grass land, at a price which, when expenses of proving title, etc., had been paid, would, invested at 3½ per cent., yield her present income; it was not true (as stated by Mr. M'Hale) that witness had offered his wife's property for sixteen years' purchase, and it was unlikely that negotiations had passed between the tenants and his predecessor without his knowledge, 48958-60, 49049-53.

O'DONEL, Mr. E. THOMAS—*continued.*

Security for Advances in case of Sales within the Zones.

When landlords and tenants agreed on a sale within the zones, the bargain itself should be sufficient security for the State; there was only occasional failure on the tenant's part to meet obligations, and it was most unlikely that a man would contract so improvident a bargain that the State would ultimately suffer; a judicial rent and the terms of sale being within the zones sufficiently protected the State and made the advance of money secure; the Act of 1903, confirming any sale of which the price fell within the zones, was not against the interests of the State, because landlord and tenant together were the best judges of the value of property; there was no need to consult the taxpayers, even though they were ultimately responsible; witness had heard nothing about the offer of the Blake-Forster Estate, under the Ashbourne Act, but could not see why, in a case described by the Commissioners, an estate should not now be passed if it came within the zones; probably the Land Commissioners had been mistaken when, after inspection, they had decided the land was not security for twelve years' purchase; it was true that at that time the landlord had been paid in stock (then at a premium), and that since then the annuity due from the tenant had been changed from 4 to 3½ per cent., so that rents might have fallen since the offer was made, but witness could not draw general deductions from a case of which he did not know the circumstances, 48960.—Witness had not known that under the Act of 1903 the zones did not apply in the case of purchase when the Congested Districts Board bought an estate; the sale of a grass farm by witness to the Board was probably the only instance of a direct sale between landlord and tenant in Westport Union under the Act of 1903, but a great many sales had taken place throughout the country; on many of these estates there were non-judicial tenants, and therefore inspection, and these might have been cases where the sales had fallen through because inspectors did not think the security sufficient, 48995-9003.

Sale of Grass Lands should be made conditional on Sale of Tenanted Land.

The general opinion amongst Mayo landlords seemed to be that offers to sell grass lands should be made conditional on the tenanted land being bought simultaneously; that might or might not be the tenants' view, but they would probably be very glad to get the grass lands, and most landlords were willing to hand over the two sorts together to a purchasing authority; the case of the Crahagh farm seemed to be an exception, but witness knew nothing about it; the landlady might, or might not, have been entitled to what she proposed to ask for the land, 49004-24.

Tribunal to fix Price of Land—Estates Commissioners not an Independent Tribunal.

All prices in regard to sales of land should be fixed by an impartial tribunal; it was most objectionable to have the price determined in every instance by the purchaser, *i.e.*, the Estates Commissioners; a landowner in Mayo had consented to sell them grass land from which he had drawn £3,000 a year; after inspection they had offered a price which would have reduced his income by £500; apparently they had fixed a price to suit themselves; the landlord might ask too much, but at least he should be able to refuse the price fixed by the Land Commission; in this case there had been as yet ro tenants, so the Commissioners were virtually the purchasers; they meant to be fair, but they could not really be just; witness' distrust of them was based on the single case cited; the Congested Districts Board, being more experienced, would probably be better judges, 49024-49.—Almost all Mayo owners would sell tenanted and untenanted land on the basis of getting their incomes at 3½ per cent.; to ask them to sell for less seemed nothing short of confiscation, 49049.

SWEENEY, Mr. PATRICK.

See pp. 80-2.

General Poverty and Congestion in Achill—Failure of Potato Crop.

The condition of the people of Achill was very bad; a family of six or seven often had to live on two or three acres of bog, the produce of which could not support them; there was no more congested corner than Achill, 49056, 49102.—Nearly every year there was a cry for relief, which was demoralising, and this year would probably be exceptionally bad, as the potato crop was almost a total failure, 49076.

Purchase and Redistribution of whole Island of Achill by Congested Districts Board Advocated.

The Achill people would probably not migrate; it would be well if the Congested Districts Board would buy the good farms available for the enlargement of holdings; there were two large tracts of cut-away bog, resting on clay, which could be reclaimed, 49077-83.—Though a certain number would object, the majority of the owners of grass lands would probably be glad if the Board bought the whole island, striped and re-distributed it; Clare Island, where there had once been coercion, had been prosperous since its purchase by the Board; witness believed the land there to be better than that of Achill, 49102-7.

Migratory Labour—Home Industries Advocated for Women.

Girls of twelve, who should have been at school, had to go to Scotland; about 1,000 men went to England, and about 1,100 boys and women—about a third of whom were women—left Achill every year, 49056, 49059-60.—About 700 travelled by steamer to Glasgow; the rest, bound for Scotland, went by rail from Achill Sound to Dublin, and then by boat to Glasgow, 49061.—The men in England, granted a fair harvest, made from £12 to £15; some returned with £5; if there was a good hay season they had to come home at the end of four weeks, but a wet season prolonged the work and brought them more money; some could not support themselves in England till the grain harvest began, 49064-6.—Very few migrated to the Scotch coal-mines; the majority acted as gangers to the women digging potatoes, etc., in Scotland; this was cruelly hard work for women, and they had to put the potatoes into hampers and sacks sometimes weighing over 2 cwt. and carry them on their backs; at home, when the men were away, they generally did the sowing, as they did not leave till June, returning in October, 49057-8.—A handy woman or girl brought back on an average from £8-£10, 49063.—They did not go in much for weeding potatoes, and none went for fish cleaning and curing in Scotland, 49071-2.—It would be a real charity to start some home-industry, *i.e.*, hosiery or lace-making, to keep these women at home; about six months before, some Sisters of Mercy had successfully started a small branch of lace-making at the Convent, 49071, 49073.

Fishing Industry.

The fishing had rather increased lately; ten years before there had been no "nobbies," *i.e.*, large fishing boats; now there were eight, bought from the Congested Districts Board, on the five years system; the time might well be extended to ten years, for the men were honest, and had already paid off one year's instalments, but though one season had been good, two had been against them; the Board had given thousands of pounds in Achill; witness had never known a civil bill process to be given to any man there, 49084-7, 49102.

Piers and Harbours Accommodation Needed.

Achill was badly off for pier accommodation; a pier at Darby's Point, Achillbeg Island (where the fish were landed from the nobbies), should be extended 200 feet, and then boats of 100 tons could probaby float at half tide or less; a harbour of refuge was needed at Ballycurraun, near Mallaranny; natural conditions were favourable, and were a few

SWEENEY, Mr. PATRICK—*continued.*

thousands spent on a pier, any boat could save itself by going there in rough weather instead of, as now, to Westport; a few hundred pounds should be spent on the removal of some rocks opposite the Coast-guard Station; the Board had spent five or six thousand pounds on a fine pier at Keel, but this had never been of any use, because a bar had always choked the entrance to the harbour, 49088-96.—The building of the Cleggan Station railway was essential; it would open up the district, greatly benefit the people, and give employment; the Directors of the Midland Great Western had said they would work it if built, 49096-7.

Dredging of Channel from Achill Sound to Darby's Point.

The Channel from Achill Sound to Darby's Point should be dredged; it had been choked with sand since the bridge was built, and fishing boats were now blocked; eventually the people of Achill would probably have to depend solely on the fishing, which seemed the only industry likely to succeed; rates were already too high for the County Council to make any further grants, 49096-8.

Dovega Bridge.

A bridge built by Mr. Balfour's private generosity for the congested village of Dovega had been swept away, so that communication was cut off between the two sides of the village, 49097.

High Rates—Enforced Expenditure by County Council.

Rates were now about the same as before the establishment of County Councils, but there was much complaint of the rates on buildings. Witness thought the rate was 6*s.* 8*d.* on buildings and 3*s.* 4*d.* on land; he knew the increase had been progressive owing to the County Council being obliged to provide money for the lunatic asylum and for matters outside the province of the Grand Jury, *e.g.*, sheep-dipping, besides pensions for old officials, 49102.

COLLERAN, Rev. MARTIN.

See p. 82.

Possibilities of Developing Achill by Reclamation and Drainage.

Witness had not been long in Achill, but saw there great possibilities of development, both in land and sea, by a paternal Government; patches of tilled land—rich meadow—lying in the most barren part, showed what (given proper assistance), might be done by the active, industrious population; if lands, now flooded, were drained, more farms could be conveniently drained, and crops could be produced where it was now impossible to grow them; doubtless, the people were employed somehow from November to May; the men almost certainly worked their own farms.

Home Industries advocated for Women.

It would be well if some industries, *e.g.*, stitching, knitting, or spinning, were started as winter employment for the women; the six or seven thousand now in Achill apparently formed little over half of our increasing population, 49108-12, 49114.

Migratory Labour.

The rest of the people (including boys and girls, who should have been at school), were in Scotland; the migrants earned enough in summer to keep them in winter, which accounted for there being so little migration from Achill; there were more migrants—girls especially—in Achill than in Galway, Mayo, or Roscommon, 49108, 49113, 49115-7.

Failure of Potato Crop.

The potato crop, and to some extent the oats, had been destroyed by rain; it would probably be necessary to support the people during the winter, as both winter and spring promised to be very bad, 49117.

O'DONNELL, Mr. PATRICK.

See pp. 82-3.

PROTEST AGAINST MR. DORAN'S REMARKS CONCERNING "AGITATORS."

The men whom Mr. Doran had referred to as "agitators" were the elected representatives of the people, and knew the needs of the district better than any paid official of the Congested Districts Board could do; they were only too glad to co-operate with the Board, 49118.

ACTION OF CONGESTED DISTRICTS BOARD IN REGARD TO THE STONEY AND OTHER ESTATES; LOCAL OPINION IGNORED.

The Board had done a very great deal for the country, and should be added to and strengthened, but some few of their operations had been great failures; the re-sale of the mountain to Mr. Stoney had been, to say the least, a grievous mistake; they should have consulted Canon Grealey, by whose advice the O'Donel farms, near Newport, had been bought at 7½ years' purchase, while Mr. Doran had bought the tenants' interests on inferior land on the Stoney Estate at twenty-six years' purchase; it was time they were now collecting the rents and spending them on improvements in the interests of tenants, but the land had not been striped—could not be as yet—and one of the tenants (who had a holding from Mr. Doran), had said he would refuse a holding when offered one on it, 49119-29.

FISHERIES.

Along the sea-board of the Westport Union, running from the Killeries to Blacksod Bay, the fishing industry was chiefly carried on in small boats and curraghs, and for want of larger boats and proper harbour accommodation, the fishermen were unable to reap the rich harvest awaiting them; the principal fish were herring and mackerel, but there was an abundant supply of cod, ling, plaice, sole, turbot, haddock and lobsters, 49129.—The fishermen worked with great energy, some having gone as far as Downing's Bay in Donegal, and been fairly successful; some did not come home until Christmas, 49139.—There seemed to be a great future for Achill fisheries, 49138.—The principal fishermen of Currane (Achill) had got some large fishing boats from the Congested Districts Board, but said they must return them if the time allowed for payment of instalments were not extended from five to ten year, 49129.—The Congested Districts Board should thoroughly clean and deepen the harbour at Clogher (Currane), so that fishermen could enter in all weathers, 49136.

WASTE OF PUBLIC MONEY ON USELESS PIERS.

Much public money had been wasted by building useless piers; in Westport Union alone probably fully £50,000 had been thus squandered by the Board of Works, *e.g.*, on Lecamry pier, costing £7,500; on the useless pier at Mallaranny; at Keel, where the entrance was almost too narrow for a row boat, and was filled with rocks and boulders; piers had been built at Duport costing £1,832, and in the valley of Achill (this last, however, had not been built by the Congested Districts Board), where there was no fishing population; certainly, fishermen from other places, *e.g.*, Inniskea, came in occasionally; these last coming principally from Achill Sound to sell lobsters, 49130-7.—The people on the coast between Newport and Mallaranny were excellent fishermen, but Mallaranny Pier was becoming useless, except as a shelter in case of storm, 49178.

DEVELOPMENT OF HOME INDUSTRIES ADVOCATED.

The Mayo County Committee of Agriculture and Technical Instruction had sent a crochet teacher to Achill for six months, who had said she had not met more intelligent or industrious girls than in Mayo. Some, after three months' training, had earned from 5*s.* to 7*s.* a week by crochet, without neglecting home duties; if the Congested Districts Board would send three crochet teachers to Achill during the winter they might eventually stop the demoralising annual migration of the girls to Scotland, 49138.—The nuns managed a lace school, 49139.

O'DONNELL, Mr. PATRICK—*continued.*

SALE OF LAND TO EVICTED TENANTS—INCREASED RENTAL OF ISLAND.

There were four or five good farms—one owned by Mrs. M'Donnell, of the Valley, another by Mr. Sweeney (senior) and Mr. Sweeney (junior); the last would not object to selling at a fair price; in 1846 or 1847 all these lands had belonged to the tenants; the rental of Achill had been £800, but by 1879 (when the Land League had been started) it had risen to £5,000, 49139.

M'GOVERN, Mr. JOHN.

See pp. 84-5.

SLIGHT INACCURACY IN CANON GREALEY'S EVIDENCE.

Witness fully agreed with Canon Grealey's evidence, except that he believed Conway, the herd, had got most of his money from two daughters and a son in Colorado, 49140.

PARTICULARS AS TO ESTATE OF MR. STONEY.

It was not true that Mr. Stoney had made the sale of arable land conditional on getting back the mountain, 49140.—On the 9th November, 1903, witness had been on a deputation to Mr. Jones, the head landlord, who had said he was most anxious to sell the land. Immediately afterwards Mr. Stoney (a lessee witness thought) had stated that he had no objection to sell at a fair price; this he had probably received; in March, 1905, the Stoney part of the estate, and in June, 1905, the entire Jones Estate, had been vested in the Congested Districts Board; the Stoneys being only middlemen, the Board was bound to get the land with or without their consent, 49140-1, 49143-4.—Mr. Doran's statement that Mr. Stoney had at first refused to sell, because that would upset his farming arrangements, could not be true, because, though a part of the farm (Rockfield) had been grazed by Pat Moran and others on the eleven months' system, he himself had never farmed, 49141-3. —The tenants had said they would not need any land outside their own, provided the land were striped, and they were given a part of the lands on the estate and their former rights to the mountain; apparently the tenants had had a right previously, because two years before, at a seed distribution in Westport Union, John Loftus, of Bunhowna, had been charged for five bags of potatoes—three bags as a valuation of 2*s.* for the mountain, the rest as a valuation of £1 5*s.* of his holding; he would surely not have been rated for the mountain if he had no right to it, 49161-3.—That day witness had met two tenants who seemed very sore over the re-sale, 49165. —In December, 1906, a notice in a local paper had stated that Mr. Stoney had poisoned the estate sold by him in 1900 to the Congested Districts Board, for the destruction of vermin; this seemed to show that he had the right of game on all the mountains and islands of the estate (No. I.), as specified in the notice; witness admitted that the Board would probably not put the notices in, and that it might only appear to the public as if they had been inserted on Mr. Stoney's authority, 49165-75.—Ten or twelve years before, the Stoney tenants had been prosecuted for cutting seaweed on the estate, but Mr. Horne, then Resident Magistrate, had dismissed the case in their favour; since the purchase of the estate by the Congested Districts Board, Mr. Stoney had again prosecuted, and this time convicted them, because the Board had not bought the seaweed, *i.e.*, the foreshore, with the estate, 49175-8. —It appears that Mr. Stoney had given the Congested Districts Board a right of way on the property of Sir Roger Palmer, whose agent had stopped their finishing a road they had begun; they had also opened up a quarry, building a shed for a powder magazine, and Mr. Jones had interfered, because they had neglected to buy the mineral rights of the Stoney No. I. Estate, though vested in the Board, 49144-7.

JONES ESTATE.

The valuations on the Jones Estate might be a little more than those on the Stoney Estate, though in some instances they were less, but the same remedies were applicable to the two cases; the estate had cost

M'GOVERN, Mr. JOHN—*continued.*

about 21½ years' purchase, though the representatives of the former owner, the late Victor E. Kennedy, had offered it to the tenants for about eleven years' purchase, and been refused, on the ground that the land, if given gratis, would be useless to them, 49178.

Poverty of Stoney Estate Tenants—Dependent on Picking Seaweed.

The holdings on Stoney No. I. Estate, with an average valuation of £1 10*s.*, could not support the tenants; some people spent their week gathering cockles, etc., leaving home at nine or ten at night, carrying the shell-fish on their backs to Castlebar, and not reaching home again till daylight of the second morning following; seven years before, a case of great hardship had occurred; witness had seen the mother of a large family resting by the roadside at three on a summer's morning; she had two donkeys, and beside her a basket of cockles she had been carrying on her back; she had walked to and from Castlebar, a distance of forty miles, and the next day had given birth to a child; the men of these families migrated to England, the girls to Scotland; what applied to Achill concerning migration applied equally to this estate, 49147.

High Prices Given for Land by Board encouraged Emigration.

Certainly the Congested Districts Board should do their best to enlarge these poor holdings as soon as possible, but they should not bribe tenants to emigrate by offering exceptional prices for their land; as this was against the Board's interests, they were probably not responsible for the actions of their officials; it was desirable if the Kilcoynes would have found another purchaser than the Board; they and certain others had intended to emigrate, but witness knew all the local people, and thought that some at least would not have emigrated if the Board had fulfilled their expectations of enlarging holdings, 49148-60.

Local Support of the Board—Efforts to Induce Tenants to buy Through the Board.

The officials of the Board received as much local support as was possible; tenants had even been prevented buying direct through Judge Ross's Court, as the agent, Mr. Delandre, could testify, and a solicitor in Dublin had been instructed to appear on their behalf; about a month ago they had decided not to buy through the Board, unless consulted as to price, 49152-3.

MASTERSON, Mr. MICHAEL.

See p. 85.

Evictions in Achill; Hardships of Tenants.

Forty or fifty years ago, Mr. Pike's tenants in Achill had been evicted from the grazing lands, now occupied by Mr. Sweeney, and sent on to the shaking bogs and rough land, which they had to redeem and clear. The landlord had taken part of the mountain from them, and fenced it for himself, 49181-2.

Increase of Rents; Unfair Treatment of Tenants by Landlord.

The townlands had been striped, and three tenants put on each stripe, everyone of whom, witness understood, had at first paid ten shillings, and had since been rack-rented up to £4, 49181-2. An Act of Parliament had reduced the rent by five shillings in the pound, and there had been another reduction on the second statutory term, but some tenants, being too poor to go into Court, had made a written agreement with the landlord; some who had no cattle, got

MASTERSON, Mr. MICHAEL—*continued.*

a reduction of three shillings in the pound; more, who had cattle, got free grazing, but no reduction in rent; the landlord had virtually charged for the right to the mountain by adding a shilling to the rent, though this land had not been mentioned in the agreement, 49182-8.

Extension of Pier at Darby's Point advocated.

The Congested Districts Board had greatly improved the pier at Darby's Point, and an expenditure of half as much again would be an everlasting benefit to the people, especially the fishermen, of Achill; were the pier ertended by about half its present length, any ship coming into Clew Bay could bring a cargo there, 49188-9.

Migratory Labour.

Girls of twelve, instead of going to school, had to earn their living in Scotland, where they had to sleep in cold barns and endure many privations, 49189.

CORRIGAN, Mr. E. J.

See p. 86.

Acreage and Valuation of Ballycroy; Land in Hands of Landlord.

Ballycroy North and South contained 52,168 acres; the valuation on agricultural land, excluding game, was £1,284, 49190.—40,000 acres were in the hands of three landlords; on two estates the game was the most valuable asset; on one of these, the Busby Estate, the tenants had the grazing, but on the larger one of 29,160 acres tenants had no grazing rights outside the ambit of their holdings; excluding the demesne, about 600 acres, the landlord grazed 16,500 acres of the best grazing mountain in Ballycroy; eighty-four tenants held 5,548 acres—average valuation £3 16*s.*, *i.e.*, 6*d.* each tenant.—Ninety-three tenants held 7,505 acres—average valuation, £6 or £7; the landlord held 17,017 acres, with a valuation of £348 11*s.*, 49190, 49193.

Land would well repay Cost of Reclamation; Refusal of Board to buy General Clyde's Estate owing to lack of Funds.

The majority of these large grass ranches were reclaimable, fit for tree-planting on the mountain side; witness's experience made him certain that a great deal of land would well repay the expenditure of intelligently applied labour and defray the cost of reclamation; he had been working steward for eight years on General Clyde's estate, where there was splendid soil for reclamation; the landlord and another gentleman had spent double the rent they received on draining, reclamation and road-making, and had been repaid for their expenditure; rents had been reduced and there was no expense for labour; General Clyde had offered to sell to the Congested Districts Board, but they were not able to buy at present owing to lack of funds, 49191-200.

Operations on General Clyde's Estate discontinued since Passing of Act of 1881.

Since the passing of the Act of 1881 land operations had been dropped and no employment given on General Clyde's Estate; the Board had bought an estate of 11,000 acres, and had given much needed employment, 41190, 49192-3.

Work of Parish Committee, etc.

The condition of the people had been improved by the building of out-houses, the removal of cattle, and so forth, through the Parish Committee; the Congested Districts Board should get more funds for these purposes, and for the reclamation and draining of mountains, the drainage of which would make the climate healthier; the Board inspired more confidence in Ballycroy than did other Boards, because Most Rev. Dr. O'Donnell and Father O'Hara were on it, 49200.

CORRIGAN, Mr. E. J.—*continued.*

Fishing Industry—Pier at Fahy needed.

Witness had been told that there were sixty-seven boats in the parish of Ballycroy, and had there been a pier at Fahy, near Donagh, the people would certainly have been better employed fishing than in going to England and Scotland; disasters in 1838 and 1840 had stopped the fishing, 49200.

Need for Extension of Board of Works Loan System.

Out of 297 tenants only twenty, *i.e.*, those of £7 valuation, were entitled to Board of Works loans; it would be beneficial if those who owned thirty acres of land could get loans spread over several years, 49200.

Enlargement of Economic Holdings Advocated.

There was no chance of improving conditions in Ballycroy district unless even economic holdings of reclaimable land were made large enough to be worked with a plough, 49200-1.

RUTLEDGE, Mr. THOMAS.

See pp. 87-93.

Value of Mayo Estates as Security.

Witness appeared on behalf of County Mayo branch of Irish Landowners' Convention, 49202.—An opinion prevailed in Mayo that Mayo estates were not high-class security nor as sound a security as estates in other counties; in opposition to this opinion witness called attention to tables 69 and 71, pages 72 and 74 in Report of Irish Land Commission for period ended 31st March, 1906, dealing with judicial rents fixed under Land Law Acts for first and second statutory term from 1st August in 1881 to 31st March in 1906, and from commencement of second statutory term to same date; witness also called attention to concluding paragraph in section 8, sub-section 1 of Land Law (Ireland) Act, 1881, dealing with applications to Land Court to fix fair rent; which stated that the gentlemen appointed to fix fair rents "after hearing the parties and having regard to the interests of the landlord and tenant respectively, and considering all the circumstances of the case, holding, and district, may determine what is such fair rent," 49204, 49212.

Average Reduction in respect to First Term Rents.

Properties in Mayo must have been let on more reasonable terms than those in other Irish counties, as the tables showed the average reduction for all Ireland in respect to first term rents was 20·7 and for Co. Mayo only 19·1, 49204.—Average reduction in Province of Munster was 22·1; in Leinster, 20·1; in Ulster, 19·7; in Connaught, 21·0; the only counties with a less average reduction than Mayo, were in Leinster, County Kildare, 17·5; King's County, 18·4; Westmeath, 17·8; Meath, 18·9; and in Ulster there was Antrim, 18·7; Down, 19; Fermanagh, 18·4; Londonderry, 18·6, 49205-8.—Witness's argument assumed there was a fixed and settled principle of valuation of land, but he admitted that the evidence was that there had been no fixed principle of valuation, 49209-11.—He assumed that in fixing fair rents account had been taken of all the circumstances of difference between a rich and poor district, 49212-3.—In fixing fair rents in Mayo, some of the rents had been put on reclamation made by tenants, much reclamation had been done on the poorer land, 49214-5, 49217-8.—The first term rents were perhaps about equal to the Government valuation of Mayo, which was supposed to be very low, 49216, 49219, 49221.

Average Reduction for Second Term Rents.

Average reduction for second term rents fixed under Land Law Acts down to March 31st in 1906 was 19·7 for Ireland, and for Mayo it was only 15·5; in Province of Munster average reduction was 18·1; in Province of Connaught, 17·5; in Provincee of Leinster, 16·8; in Province of Ulster, 22·7, 49218, 49222.

RUTLEDGE, Mr. THOMAS—*continued.*

—The only counties with a less average reduction than Mayo were Kildare, 14·1; King's, 14·7; Meath, 13·9, 49218, 49222.—The reduction being less than elsewhere, showed the land was originally let cheaper, and in consequence for the money now advanced that land would form a better security than it would have afforded if the original rents had been too high, 49224.—In witness's opinion rents in Mayo had always been paid punctually, 49225.—Landlord's rent was as secure now as formerly, 49230.—The smaller the holding the greater the number of years' purchase for tenant right, 49231.—There was great demand for the small holdings, 49232-3.—Witness handed in a return dealing with sales of tenancies in Mayo County, and showing high prices given for occupation interest of tenants on different estates as illustrating the security of rents in Mayo and the ease with which the security could be realised, 49225-6, 49235, 49249-52.

Prices of Tenancies in Mayo.

The first case was of 92 years' purchase given for a future tenancy on a rent of £23 3*s.* 6*d.*; the second 19 years' purchase on a rent of £5 in respect of a future tenancy; these tenancies were determinable at the landlord's will subject to a notice to quit, and the tenants were entitled to compensation for improvements, 49225-9.—The third case was 19 years' purchase of a judicial tenancy on a rent of £6 15*s.*; the fourth case 26½ years' purchase of a judicial first term tenancy on a rent of £3 13*s.*; the fifth 40 years' purchase of a first term judicial rent of £1 9*s.* 4*d.*; the sixth 36 years' purchase of a first term judicial rent of £10 16*s.* 6*d.*, fetching £395 exclusive of auctioneer's commission; the seventh was 13 years' purchase of a first term rent of £2 10*s.*; the eighth 102½ years' purchase of a tenancy from year to year at a rent of £2, being £205 in addition to auctioneer's commission, 49230, 49233.—This last case was a holding without any building, but adjoining purchaser's holding; it showed the competition and market value of the land as apart from its true value, 49238-9, 49243.—Purchaser had 9 acres 31 perches, and bought 9 acres, 49245-6.—This was a cash transaction, 49248.—The ninth case was 83½ years' purchase for a tenancy determinable at will; witness thought purchaser was not actuated by other considerations than intrinsic value of the property, 49240-1.—It was near purchaser's holding and half a mile from the town, 49243.—The purchaser paid with his own money, 49244.—The two last cases were of ordinary small holdings, 49242.

Present Security—Six Estates in Mayo.

On the question of present security, witness handed in a return dealing with six estates in congested districts; there were 1,215 tenants; the average gross yearly rent on the aggregate for ten years was £6,313 4*s.* 7*d.*, being just over £5 per tenant per year; the average collection for the ten years was £6,357 2*s.* 11*d.*, including arrears, 49252-3.—Arrears were still being paid off; the punctual payment of rent on these estates as shown by a return showed the integrity of the tenants, which was itself excellent security, 49268-9.—In estate No. 1 arrears on 1st November, 1905, were £225 8*s.* 10*d.*; average rental of this estate for ten years was £1,097 2*s.* 5*d.*, and the average collection £1,100 12*s.* 5*d.*; average rent from each tenant was under £4 per year; on estate No. 2 average rental was £1,475 3*s.* 2*d.*, collection during ten years £1,477 17*s.* 10*d.*, 49254.—Three-fourths of tenants on these estates were migratory labourers; 90 per cent. of the rents were paid in gold which must have come from England, 49255-7.—These tenants retained their holdings merely as residences, 49258.—On No. 3 estate average rental for ten years was £651 1*s.* 3*d.*; tenants paid £670 17*s.* 5*d.*, 49265.

Terms of Purchase offered by Landlords.

Witness handed in a return taken from a Blue Book dealing with untenanted lands on estates of which he was agent and whose landlords were willing to dispose of them as well as of the tenanted lands belonging to the same owners; for these lands the

RUTLEDGE, Mr. THOMAS—*continued.*

owners would accept a capital sum, which after transaction was completed and all expenses paid, would, if invested at 3½ per cent., yield the landlord the net income he had before the sale, 49269-75.—This sum would not be in addition to a bonus, 49276.—Witness had sold a few estates, and in so doing had endeavoured to arrive at a price that would secure the landlord his net income, 49277-8.—Landlords would have no objection to submitting their books to Estates Commissioners or Congested Districts Board, 49279-82.—This would not be the same as giving an account of the net income under which the Income Tax was paid; Income Tax should be assessed on the Government valuation less one-eighth deducted under the Finance Acts, 49283.—In the case of mortgages, when the interest on the mortgage was more than 3½ per cent., the price put down to secure the net income would not include deduction of interest on the mortgage; mortgages were a personal matter between the landlord and his creditors, 49284.—If the interest on mortgages were taken into the calculation there would be danger of injustice to the remainder man in the case of mortgages on life estates, 49285-6.—In the case of the mortgage of the fee of an estate, it was true that where a man was paying five per cent. interest on a mortgage and agreed to pay off that mortgage he saved on the five per cent. interest, and if the 3½ per cent. interest were calculated without taking this fact into consideration, the actual net receipt would be over-estimated by the difference between 3½ per cent. and the amount paid on the mortgage, 49286.—Arrears of rent were a personal debt; if the landlord were tenant for life of the estate the arrears must either be paid or be added to the purchase money, 49288.—Witness did not see much difficulty about arrears, 49290.—Witness had never added nor heard of the addition of more than a year or two to the purchase money, 49291-2.—In arriving at net income the landlord would have to show the average receipts of rent within a term of years, 49294.—The arrears therefore would really disappear as the net income would be considered as far as it had been collected; this was so far as getting at the capital sum was concerned, but the arrears would still be the landlords, 49295.—The net income of the landlord would be calculated as the gross income less the expenses of collection, 49313-8.—By net income witness meant the profits of the lands for the owners in ordinary cases after allowing for poor rate and for head rent as well as tithe rent-charge and other Government charges together with expenses of management; to pay off those charges the landlord must receive a capital sum out of the purchase money, 49322.—As a rule the landlord would have only a life interest in his estate; if uncollected rents were not included in calculating the net income of an estate the rights of the remainder-man would be infringed, 49308, 49315-7.—Arrears must be settled for before the signature of the purchase agreement; after the signature the Act of Parliament cancelled them; as long as the purchase agreement was pending the landlord could never sue the tenant for rent, 49319-22.—In disposing of untenanted lands landlords were disposing of their valuable occupation interest and receiving nothing for it; if they turned these lands into tenancies they would receive large sums for occupation rights, 49322, 49325-6.—If the Department decided to let grass lands at a less figure than would recoup the expenditure in acquiring those lands the State must bridge the difference; the bonus did not do this and was eaten into by legal expenses, 49322-4, 49335.—In estates with which witness was concerned there was no difficulty in proving a landlord's net income from untenanted land; in some other cases there would be difficulty, 49327-8.—On grass lands divided into holdings by the owner the holders would be that owner's tenants, 49329.—Witness had known instances since 1881 of owners thus breaking up grass lands and letting them in small divisions to adjoining tenants, 49331-3.—Witness did not contemplate this being done on a large scale; it was a great mistake it had not been done, 49334-5.

Compulsory Purchase Unnecessary.

Congestion problems in Mayo could be solved without compulsion if landlords received for their land

RUTLEDGE, Mr. THOMAS—*continued.*

a sum which invested at 3½ per cent. would give them their net income, 49381-5, 49389.—Compulsion generally produced dissatisfaction, 49385-9.

Congested Districts Board.

Witness thought Congested Districts Board should meet more frequently, 49335-40, 49346, 49359-60.—Witness had done business with Board, 49357.—He had knowledge of Board's work, 49370.—He had seen work of Estates Commissioners on Clanmorris Estate, 49371.—He thought Board should continue their work because of their previous success, 49372-3.—Board should consist partly of members representative of each county, 49342, 49361-3.—There might be sub-committees of Board dealing with each county, 49344.—The principle of nominating members should be retained and Board's powers extended, 49349-50.—Board might act through a Committee of their own body, 49351-2.—Board should continue and act independently of all parties; it was at present independent of the Estates and Land Commissions, 49352A-4.—Board should be paid, 49355.—An elective system would probably not result as was suggested in removal of members of Board after a couple of years' work, 49364-6.—Board should have more money placed at its disposal by the Exchequer, 49366, 49367.

Drainage.

Government should undertake a large scheme of arterial drainage in County Mayo, 49366.—A good drainage system would improve the yield of very small farms but not necessarily to the benefit of the workers, as tillage on a large scale had failed in Mayo, 49374-80.—Sea fisheries should be further assisted by railway extension and building of more piers, 49366.

See pp. 93-6.

Distrust of Royal Commissions.

Royal Commissions did not command confidence, as the reports of several had remained without results; however, the present Commission should have a fair chance, 49397-400.

Congested Districts Board.

Congested Districts Board might have done splendid work, but it had been poorly financed and had not satisfied the people; in witness's parish eighty new houses had been built on untenanted land cut up; but outside their mearings were people in a state of congestion looking on and dissatisfied; congestion about Castlebar was very bad, 49401.—On this estate Board had been draining as well as building houses, etc., for two years; some of the tenants had their patches in twenty places; £3 was the average rental, and tenants went to England to earn money, 49402.—The land was not striped; Board had not done their work thoroughly, 49403-4.—40,000 people had left the country since Commission began its sittings; 120,000 would be gone before legislation was effected; the country was bleeding to death, 49405.

Urgent Need for Purchase of Land in Connaught.

Congested Districts Board should purchase and distribute land promptly before despair had driven people from the country; if Board had power and money congestion could be dealt with in a few years,

LYONS, Very Rev. Canon—*continued.*

49424-9.—If some authority bought out all Connaught, that would give the people hope, and they would be content to wait till the work of division was completed, 49430, 49443, 49450, 49478-82.—The whole province of Connaught should be scheduled, and every district where there were twenty families living on uneconomic holdings should be considered congested, and the holdings augmented from the nearest land available, 49447-9.—It was too late to stop the young men and women from emigrating, but if holdings of twenty-five or thirty acres were provided a tenant could educate his children, give the land to one son, and scrape a fortune for his daughter; the rest of the family would emigrate, 49431-3.—Owing to the price of produce, the land could not support all the children unless Free Trade were abolished; decline in Ireland's population was due to lack of good government and to Free Trade; Ireland should govern herself or be governed as a Crown Colony, 49434.—Witness's parish contained congested estates, without untenanted land, and estates with tenanted and untenanted land, but the landlord would not sell; Sir Henry Lynch Blosse had an estate in the parish containing three thousand to four thousand acres of grazing land which he would sell to the Board, 49406, 49408.—Sir Henry was negotiating with Board, but there was a difficulty over money, 49407-7A.—It would be a great pity if Board, whose work had had such good results, did not buy this estate and use the untenanted land for migration purposes, 49409-11.—Whoever undertook the migration work, the Agricultural Department should have a voice in the matter, because the time at which land was transferred from landlord to tenants was the appropriate moment for starting agricultural schools, 49412.—In regard to purchase of this estate the tenants should be consulted, but this would be better done privately than at a public meeting, 49413-20, 49422, 49456-9.—A simple form of transfer of land was desirable; landlords should be compelled to sell and be given their net income, but of this the tenant should be called on to pay only what he was able, the State supplying the rest out of the £3,000,000 a year of overtaxation, 49422.—Grass land, 3,000 acres in extent, existed in Mayo Abbey, most of it being in Castleknockan parish; there was less in Turlough parish, but a large tract lay close to that parish; Turlough parish was not congested; the Board had works in Mullagh, but there they had brought in people from Partry, which had displeased the local congested people, 49436-7.—In Kilmaine barony there was a great deal of grass land; most of the Mayo parishes had sufficient grass land to relieve congestion, 49439.—Migrants should be placed on land with whose character they were acquainted, 49440.—Achill people would not do very well in Mayo, 49444-5.—All uneconomic holdings should be enlarged before the sons of tenants were provided for, 49451-5.

ESTATES COMMISSIONERS.

Congested Districts Board should buy untenanted land in preference to Estates Commissioners; the latter should buy in counties where there was no congestion; Estates Commissioners had done nothing on the Clanmorris Estate, 49423-4, 49461-5.—Witness did not reflect on Estates Commissioners, 49460.—Congested Districts Board built houses, etc., on estates they purchased; Estates Commissioners merely marked out the land and paid the tenants to do the work on it, 49466-77.

HIGGINS, Mr. PATRICK.

See pp. 96-9 *and* 102.

STATUS OF WITNESS.

Witness was Chairman of Castlebar Rural District Council, 49483.—His evidence was derived from personal experience, 49532, 49536.—As Chairman of the District Council he was generally consulted by the tenants, 49533-5.

CONGESTION IN CASTLEBAR RURAL DISTRICT.

Castlebar Rural District contained 140,640 acres, the valuation being £42,598; population was 23,335, rated at £1 13*s.* per person; 4,424 of the holdings were under £5 valuation; 367 of the holdings had a valuation over £15, and occupied 36,502 acres, giving an average of 100 acres each; in 1841 the population of the Union was 61,043, and in 1891 it was 28,921, 49486.—The holdings under £5 could not support a family in comfort; the average stock on such a holding was one cow and two calves, not exceeding a year old, as well as a couple of pigs and a donkey, 49486-93.—All able-bodied men and boys migrated to England, where they earned about £7 each per annum; women and children worked the farms; one man had a family of nine to support on a holding of an acre of arable land and three of cut-away bog; non-scheduled divisions in this district were often worse than scheduled ones; for instance, on the Brabazon Estate, in Ballyhean division, eleven families lived on a valuation of £29, whilst in the same division twenty persons owned 2,032 acres; Brabazon tenants had to travel five miles for turf and five miles to sow conacre potatoes, 49495.

HIGGINS, Mr. PATRICK—*continued.*

RUNDALE SYSTEM.

The rundale system was greatly responsible for failures of crops; in rundale estates the same stripes had to be tilled for a lifetime; in Clonfert village fifteen holdings were held in rundale, one of them consisting of 3 acres 20 perches, in seventeen divisions, and another of 3 acres 2 roods, in thirteen divisions, while a third holding of six acres was in twenty-three divisions, 49493.—The Brabazon Estate was not scheduled because of the high valuation of the grazing land, 49495-8.—It was in Ballyhady electoral division, 49500.—Clonfert village was in Clonkeen electoral division, which was scheduled, 49494-5, 49498.—Clonkeen contained 118 holdings under £4 valuation, 49499.—The rent of these rundale estates had been in most cases fixed by the Sub-Commissioners, who pointed out the different stripes, 49501-2.—Within witness's knowledge, the land had always been under rundale management; in some cases the landlord never saw the estate, 49503-4.—If the estates were re-arranged they would be unlikely to return to rundale, as the people now recognised the difficulty of the system, 49505-6.—Parish Committees' work in congested areas was hampered by tenants' unwillingness to make improvements pending sale of rundale estates; the removal of a dung-heap from the near neighbourhood of a house was rendered difficult by the small amount of ground immediately attached to the house, 49509-12.

COMPULSORY PURCHASE.

Few sales under Land Purchase Acts had taken place in Castlebar Rural District, landlords generally demanding such prices as 24 years' purchase on first and 26 years' on second term rents; properties for which 26 years' purchase were asked were similar in character to the Fitzallan-Hope property, which was sold under Ashbourne Act in 1900 for 16 years' purchase; there had been no single failure to meet the annuities on the Fitzallan-Hope Estate, 49509.—In some cases landlords refused to sell these estates at any price, so that compulsory powers would be necessary to effect purchase, 49513-5.—Tenants should not pay higher prices than they could afford, and the rest of the sum required to secure the landlord against loss should be made up by the State, 49526-31.

DRAINAGE.

Drainage was a crying need in Castlebar Rural District owing to the floods; but Congested Districts Board had done good work there regarding arterial drainage, 49506-7.—The Arterial Drainage Commission had held no sitting in the district, nor examined witnesses on behalf of any of the tenants there, though they sent some evidence from Mayo, 49507-9.

STALL-FEEDING CATTLE ON SMALL HOLDINGS.

Witness was a practical farmer, holding about 100 acres, with valuation of £45, and rent about the same, 49484-6.—He tilled eight or nine acres of his farm, but not the same part every year, and he observed a rotation of crops, 49537-42.—The system of cultivation among small farmers could be improved by drainage and by liming the soil, and so forth, 49543.—Lime abounded in the district, 49546.—£5 holders usually disposed of their cattle to graziers,

HIGGINS, Mr. PATRICK—*continued.*

49547-9.—On improved holdings the cattle could be kept till ready for fattening by the Leinster men, as, with more tilling, more stall-feeding would be possible; thus the need for the grazier as a middleman would be done away with, 49550, 49561-2, 49580-3.—Such small holders as still remained when the grazing land had been divided could pass on their cattle to their better-off neighbours instead of to a grazier, 49552-60.—When grazing lands were broken up a new market would arise, and dealings be direct with Englishmen, 49617-8.—At present witness dealt chiefly with Scotch buyers, 49619-20.—Witness, on his 100-acre farm, with 50 acres in grass, could fatten most of his cattle himself, 49563-7.—He had twenty-three or twenty-five head of cattle on his holding, about five being bred on the holding in the year, and the rest bought, 49563-7, 49569-72.—His cattle were stall-fed in winter, a system which would be greatly followed if the people had the grazing lands, 49568.—Fattening on the grazing lands was not generally possible in County Mayo, 49573-5.—Witness kept his cattle three years and then put them in the stall to fatten; this system paid him, 49576-9.—On £10 holdings a few beasts could be fattened every year at a greater profit than selling stores could bring, and the system would improve the land, 49591-5.—On an average a £10 holding on ordinary land would represent about five acres of tillage, supporting ten beasts and fattening two or three, 49597-600, 49616.—Holders of £10 farms sometimes stall-fed cattle, but such £10 economic holdings were rare in Castlebar district, 49614-5.—100 acres of grazing land carried thirty or forty cattle; broken up into farms of five acres, under a system of mixed farming, they would carry 50 per cent. more, 49610-3.—Witness lived entirely by his holding, 49606.—He grew a good deal of wheat and used it for fattening cattle, 49608.—If grass lands were used as he used his holding new occupiers could earn a fair livelihood out of the land, 49609.

Sales of Tenants' Interests.

Small holders in Castlebar Rural District were generally in debt to shops, 49584-90.—Extravagant prices mentioned by Mr. Rutledge as given for occupation interest were not paid by persons whose income was exclusively derived from land, but by returned emigrants or pensioners or shopkeepers; within the last ten years, on a property for which Mr. Rutledge was agent, two tenants' interests had been sold, one to witness for 4½ years' purchase of the rental, and another for a fraction over six, 49704-7.—A holding purchased by witness adjoined his own farm, and was bought to enlarge the farm, 49708-10.

M'DONALD, Rev. MICHAEL.

See pp. 99-102.

Westport Parish.

Witness attended on behalf of Westport Rural District Council; he was the Archbishop's administrator in Westport, and represented him for that district; witness's remarks mainly applied to Wesport parish of which he was in charge, and also applied to surrounding parishes; Westport parish contained 622 agricultural tenants, who paid a total rent of £3,321 0*s.* 3*d.*; and had a total valuation of £3,150 8*s.* 5*d.*; and had a total valuation of £3,150 8*s. d.*; land in Westport parish was generally wet and cold and unproductive; some of the tenants were too poor to effect improvements, even with the aid of Parish Committees' grants, but were said to be very regular in paying their rents; in a single year £6,898 19*s.* were received by the 622 families from 1,343 of their members, who were abroad; neighbouring parishes were in a condition similar to that of Westport, 49621-2, 49624.—Witness's figures were obtained from personal enquiry of parishioners, 49623-4.—Enlargement of holdings and migration on the one hand, and on the other the development of fisheries were what was needed, 49629.

Congested Districts Board's neglect of Local Suggestions.

There should be some one on Congested Districts Board with special knowledge of the vast and poor

M'DONALD, Rev. MICHAEL—*continued.*

area between Slyne Head in Galway and Belmullet in North Mayo, which was at present neglected because no one on the Board understood its needs, 49626-7, 49630-43.—Board might in certain cases adopt local suggestion; in erecting houses on the Bingham Estate at Gloshpatrick, convenient to the sea at Clew Bay, Board had refused to add to each house an extra large room for letting purposes, which would have assisted the development of the neighbourhood as a seaside resort, 49643 5, 49663.—If Board had built an extra room, and added cost of that room to annuity, the case might have been met, 49655.—A slip built by the Board in the island of Aran, at a spot other than that suggested by the local people, had been swept away by what in Aran was called a slight breeze, 49664-7.—Natives from their knowledge of currents were better able to judge of a site for a pier than a visiting engineer, 49668-9.

Harbour needed in Clew Bay.

Between Belmullet in Mayo and Cleggan in Galway, there was no safe harbour for fishing boats in bad weather; there should be one in Clew Bay, 49670.—Collapse of the Inislyre project was attributed by newspapers to the refusal of the Midland Great Western Railway to contribute the requisite quota, 49671.—Money for the marine grant had been earmarked for Inislyre, 49674.—Mayo County Council agreed to assist by a rate for a couple of years, 49676.—Congested Districts Board was giving one-tenth of the expenditure, 49677.—The project should be taken up by some sympathetic Board, 49678.—Witness thought Government was not in earnest about the Inislyre project, 49679.

Clare Island's need of a Telegraph.

In Clare Island, which had for years been the property of Congested Districts Board, lack of telegraphic communication often prevented the islanders from disposing of their fish when caught, 49679, 49689.—The distance from Clare Island to the mainland was three miles, 49681.—The Post Office had been approached on the subject of a cable to Clare Island, but without result, 49682-3.—Congested Districts Board had helped with the cable to Aran, 49684.—A good landing place in Clare Island would be very expensive, 49686.—If there were a telegraph to Clare Island, and no landing place, the small boats from Clare Island could take fish to meet the large boats from Westport, etc., and the large boats could take the fish to the railways, 49690, 49701-3.—Much had been already done for Clare Island, but Congested Districts Board having stood sponsor for it should supply this crying need for a telegraph, 49692-7.—Witness had no connection with the island beyond being in its neighbourhood, 49698.—There was good land in Clare Island, but the fishing was necessary to enable the islanders to live, 49699.—The land round the island was proverbially good fishing ground, 49700.

M'NAMARA, Mr. A.

See pp. 102-4.

Position of Witness.

Witness was a district Councillor and Vice-President of the United Irish League, 49711.—He was a farmer holding about thirty-four Irish acres, with rent and valuation about £12 8*s.* each, 49743-7.—Part of his farm was on the shore and part was island, 49748.

Killeen Parish.

The half-parish of Killeen was very congested and large part of the tenanted portion was held in rundale; in some of the townlands valuation was less than £2 per holding; most of the tenants were dependent on extraneous assistance, mostly from relatives in America, 49711.—Tenants of the small holdings generally went to England for the harvest, 49712-5.—Marquis of Sligo was the principal landowner; in 1901 the Marquis offered this and other property

M'NAMARA, Mr. A.—*continued.*

to Congested Districts Board at eighteen years' purchase, which Board thought too high; after passing of Land Act of 1903 he was requested to sell to Board by Westport District Council, but did not do so, 49415-6.—Houston grazing ranch, containing 24,762 acres, adjoined this congested district, and four years ago Board purchased the best portion of this ranch from the Earl of Lucan; Board had been several times requested by the District Council and United Irish League to begin distributing land; Board did not answer till two months ago, when they said the land was leased last summer, 49716-20.—If Board had made repeated ineffectual offers to the lessee of this land, that fact would strengthen the case for compulsion, 49722-3.—Only 16,000 acres of the ranch were purchased by Board; the Marquis of Sligo held the rest on eleven months' system, 49723-4. —The Marquis's portion contained some excellent tillage land in the Louisburgh district, south of Westport, 49726-7.—Most of the evictions from this land took place in 1848, 49728.

Kelp Industry on Marquis of Sligo's Estate.

Kelp industry brought considerable earnings to tenants till 1907, when the price of kelp fell from £4 10*s.* to £3 10*s.*, one-fifth of the price was claimed by the Marquis; this claim was unjust, because the seaweed did not grow on the foreshore, but drifted in from the Atlantic; the Marquis's claim was probably derived from the fact that the weed was collected on the foreshore; the seaweed was valueless unless manufactured into kelp within four or five days of landing, 49728-31.—Witness believed the Marquis had a definite right to the foreshore, 49732-4.—The land was rented down to high water mark, and tenants not owning land near the shore had to pay the Marquis for a place on which to dry the seaweed; carting to the kelp store cost 5*s.* per ton; after deducting carriage and royalty the tenant made only £2 11*s.*; at this price the industry would probably die out; the amount of kelp made in 1907 was only half that made in 1906, 49734-5.—At one time kelp fetched £7 a ton; up to last year it fetched £6 10*s.*, 49736.—If a pier were built at Bunlough Point, kelp could be shopped to Ronagh, instead of being carted seven miles to a kelp-store, 49748-51.—Kelp was taken to Glasgow or London by steamer from Ronagh, 49752-3. —The seaweed was shipped half-burned, 49724.

Fishing on Mayo Coast.

A pier for fishing and for landing cattle was needed at Bunlough Point, and would enable the people to earn a good deal by fishing; Congested Districts Board had been several times memorialised on this subject, 49736, 49741.—There was excellent lobster and mackerel fishing ground on Mayo coast, and lobsters were taken thence by Connemara boats and landed at Connemara and Achill, 49736-9.

Cases of Tenants of Congested Districts Board not benefited by Improvements.

On estates purchased by Congested Districts Board the old rent was charged till the estate was resettled; this was so on the Jones's Estate and part of the Lucan Estate, 49753, 49755, 49760-1, 49763.— Where the Board gave the tenant no other advantages he should receive a reduction of rent, 49758-9.— It would be the same thing if he had some advantages on the occasion of the sale, 49762.—It was sometimes six or seven years before an estate purchased by Board was sold to the tenants; tenants should get an immediate reduction in proportion to the annuities they would have to pay if they bought direct through the Land Commission; when purchases were made direct through Land Commission the immediate reduction was 8*s.* in the £, 49764-8.—These arguments referred to the better-off tenants who might have preferred to purchase through the Land Commission but had given the poor tenant an opportunity to obtain an enlargement to his holding, 49769.—Twenty-five years ago the Marquis of Sligo offered the Killeen estate to the tenants at eighteen years' purchase, but it was agreed at a meeting that this arrangement

M'NAMARA, Mr. A.—*continued.*

would leave most of the people as badly off as ever, and the better-off tenants agreed to let the sale run out until the grazing land was distributed, 49770.— Better-off tenants were not always benefited even by such works as arterial drainage, which did not give any advantage to high-lying lands, 49772-4.

KENNY, Mr. P. D.

See pp. 104-11 *and* 166-7.

Scientific Reclamation of Bog-land.

Witness had a tract of cutaway bog in County Mayo in which, in 1906, he grew heath, and rushes, and bog cotton; in 1907 he grew two good crops of clover and rye-grass hay, 49776, 49781.—The under stratum was an alluvial drift under the bog which afterwards was once a soil before the bog super-accumulated, 49777.—Witness, when a child, saw about ten feet of peat cut off the bog for fuel, 49779.—There was an average of probably eighteen inches of the bog surface left between the surface of the ground and the sub-soil, 49779A.—In raising these crops of clover and rye-grass hay the cost of fertilising and seed was more than paid by the first year's hay, and the land was reclaimed in addition, 49779A-80.—Vast tracts of mountain land in congested districts could be reclaimed in this way with little labour; in some places however drains would be necessary, but in the larger tracts these would be less expensive than witness had found them, 49781-2, 49789.—It was not necessary to reclaim before getting the first clover crop; reclaiming was chiefly a question of chemistry of the soil, 49783. —Lime phosphates and potash were the chief manures employed by witness before putting in the seed; in planting clover he treated it with tritro-culture which freed nitrogen from the atmosphere and increased the vitality and volume of the plant; leguminous crops depended little on nitrogen in the soil and legumes especially clover were the most valuable crops that could be grown by these inexpensive substances while putting into the soil the expensive substances that made complete manuring; nitrogen was worth £14 a ton, and the lime phosphates and potash £4 a ton, 49784, 49787.—Fertilising cost about 30*s.* a statute acre, 49790.—Clover, except white clovers, would live on ordinary land not more than three or four years; it was not a perennial, but the process left behind a botanical habitat for other clovers that were permanent and good pasture, 49785.—Witness used the legumes only as a means of reclaiming; they were exhaustive of the inexpensive and increased the expensive substances of fertility, 49787.—They rendered the land fit to grow other crops, 49788.—The plants growing on a bog would show what was underneath; sorrel and heather and sedge would grow only where there were vegetable acids in the soil; these acids prevented the life of the more valuable organisms and prevented the decomposition of vegetable organisms natural to the habitat; where there was enough water bog was produced by accumulating insufficiently decomposed vegetable fibre, often rich in nitrogenous substances, if an alkali were applied to neutralise the acids the result would be that the plants dependent on the acids would be stopped in their growth and the undecomposed matter would be set free to decompose, and so set free the nitrogenous matter it held; witness had found the mixture of phosphates of lime and potash the best alkali for this purpose; six or seven cwt. of the mixture were needed per statute acre, 49788, 49790, 49821-2.—The manures sold in the West of Ireland were the wrong kind, and had prejudiced the people against artificial manures, 49823.—The alkali should be applied in October or November, and there should be a little scatter of something else to enable the seeding to fasten a little on to its footing, this would mean a cost of about 10*s.* per acre, 49824-5.—Witness had used stuff dug out of the foundations of an outhouse; if broken up turf dug from the ground itself were used it would be liable to get suddenly wet and dry and the seed might be destroyed, 49826.—The bluish clay stuff found under bog would be excellent for this scattering, 49828.—The heath should be left till the following autumn, when it would be brittle before the scythe, 49826.—Seed should be sown in April to July; if sown in April the crop could be mown off with last year's

KENNY, Mr. P. D.—*continued.*

heather, 49831.—The missing element of fertility in the soil which now have been made up and farmyard dung, which would not previously have been of much use, could now be added, and would produce a larger crop, 49841A-3.—The land could then be ploughed, but would be better kept in meadow for a few years, as it took time to decompose the mass of half decomposed matter underneath the land; in this process the fertility travelled downwards an inch or two per year, and ploughing should be reserved till there were six or seven inches of fertility, 49791, 49844.—Alternate cropping could then commence if the land were dry enough, 49845.—Land in congested districts at present practically useless could be made to produce at a profit more than the whole existing production of the land worked; with greater intelligence land at present cropped in congested districts could easily produce double without additional labour, 49793-8.

Economic Holdings.

An economic holding was not a geographical measurement; it was a holding held by an economic tenant, that it, a man who treated efficiently the land under his control, 49829, 49832-3.—There was a limit to this statement's application, but witness could point to cases in Mayo where a man with ten acres enjoyed a higher standard of living than a neighbour with 100 acres, 49836-41.

Want of Scientific Training in Mayo.

Improved methods of cultivating such as those just described were regarded with suspicion in Mayo; there was a tendency to discredit facts; if the public mind were educated and an industrial atmosphere and an industrial public opinion created the present incapacity at industry would disappear; witness's object in making agricultural experiments was to benefit his neighbours, but they seemed incapable of profiting by the object lesson; privileged opinion, that is, the opinion of persons in prominent positions, was the only thing that would have an effect on the people, 49845-9.—A want of scientific education prevented the people from making the most of the work of Congested Districts Board; for this reason no use had been made of the Board's excellent drainage work in Roscommon, near Ballaghadereen, 49850-5.—The Irish were naturally as capable as any people in the world, 49856.

Cattle on Small Farms.

There would be less need for enlargement of holdings if efficiency in working them were increased, 49799.—Large holdings were not needed for raising cattle; in Belgium four full-grown cows could be kept on the equivalent of an Irish acre, 49800.—In Belgium the food was obtained by the quick succession of summer crops, 49802.—Weather in Ireland was more favourable to growth of green crops than in Belgium; it was less favourable to the saving of dry grass crops, 49803.—Growth in Ireland began earlier and continued later in the year than in Belgium, and vegetable life in Ireland never in a state of nature fell to so low a level as in Belgium; these facts compensated for the more variable summer, which seldom was severe enough to prevent growth, though it had done so in 1907; 1907 was the first year in which this had happened in the six years witness had been in Ireland, 49809.—The milder Irish winter would not make the difficulty of keeping down weeds insuperable if ploughing were done properly in autumn, 49810-1.—Cattle could be fed in summer on green stuff instead of grazing; some land, notably friable land, in West of Ireland could produce four times as much summer feeding from an acre under cultivated green stuffs for feeding in the byre than from an acre of grazing, 49802.—Witness could grow four crops of clover per year in Mayo in a bad year, 49804.—Lucerne was the best crop for continuous summer cutting, but was not grown in Ireland; if it were, one acre would supply for green feeding in summer as much as three or four acres of the same land laid out in a dry season in bad pasture with bad seeds, 49808.—Lucerne where it was grown was a success in Ireland; it also got all its nitrogen from the air, 49813.—Witness thought the Department of Agriculture were making experiments with lucerne in 1907; three crops of rye-grass could be grown per year on fairly poor land, 49814.—There was too much of allowing cattle to run in Ireland, 49815.—Mr. Boyd's suggestion that 100 cattle would do better on a 100-acre farm than 100 cattle on the same land divided into four 25-acre farms might be correct, but in stall-feeding with green stuffs specially grown for the purpose the animals got purer food than they would find roaming at will over 100 acres, where there would be inferior food growing, 49816-7.—On a system of mixed tillage farms should carry twice the number of cattle supported under the grazing system, 49818-20.

KENNY, Mr. P. D.—*continued.*

Clerical Interference with Migration Schemes.

Officials of Congested Districts Board generally had complained to witness that the Board's migration schemes were hampered by the clergy, who prevented the people from leaving their own parishes, 49857, 49867-8, 49872-8.—Cases had occurred in County Mayo, 49867-6.—One case occurred in the townland of Cultrasna, within a mile of Kiltimagh, where the Board had settled all the tenants on the mere equivalent of the land they had before; none of them could work the plough owing to the nature of the land; these tenants continued to go to England for a living; in one instance the Board had built a new house on an estate of 15*s.* annual value, thus perpetuating its congestion; this Cultrasna land had been striped by straight stone walls; all the tenants whom witness interviewed there intimated their willingness to move to better holdings, except one, who said the parish priest must first be consulted, 49881-5, 49912.—Witness afterwards repeated this man's statement to other Cultrasna tenants, some of whom said the priest objected to their leaving, and they thought it was because they were worth so much per household per year to the parish collection, 49891-3, 49898-901.—There was land within twenty-five miles which might be made available for these tenants; some of it was in Board's possession, 49904-7.—Witness had never been informed that these men had been offered the opportunity of migrating, but he assumed it was the Board's duty to find land for them; finding them fixed on impossible holdings he asked would they go if they got land, and was told first they would not, and then that they were willing to go, and then he discussed the reasons why they did not go, 49913-4.

Compulsory Acquisition of Land.

The use made of land and the capacity to make use of it were more important questions than compulsory acquisition, 49918A.—Witness would agree to compulsion if it resulted in land being held by the capable, but he saw no reason to suppose that the Board would only give land to the capable, 49921-2.—Irishmen were comparatively incapable in industrial matters though not from their own fault; in matters of industry and economics they were far behind other nations, and would remain so as long as they were told they were not to blame for it, 49923-4.—Witness objected to compulsion in any form; the analogy of railways was defective, as everyone wished to travel, but only a class could hold land; the community's interests were concerned in the land question, and whatever conduced to the land's being turned to the best account should be encouraged; usually interference with freedom in such matters operated against careful use of the land and its resources, 49925-7, 49934-7.—The interests of the community in Ireland were mainly agricultural but not entirely so, 49928-32.—In Queensland, where the State had resumed large tracts of grazing land, property in the land was being individualised, 49938.—Ethically the land should be the nation's property, but the ownership of the land was not one-fifteenth as much as the production of the land under intelligent treatment, 49940-1.

Statement Corroborating Evidence of Witness at Castlebar.

Witness put in a document relating to evidence previously given by him, which had been questioned, 51552.—Containing a statement by Mr. Jordan, of Kiltimagh, Petty Sessions clerk, 51553, 51555.—Volunteered by Mr. Jordan as a verbal statement, 51555, 51568-9.—And put in writing at the request of witness, 51568-9.—This was given to witness after he

KENNY, Mr. P. D.—*continued.*

had given his evidence before the Commission, 51555-6.—This evidence was called in question, which did not surprise witness, as it was extraordinary evidence, 51555.—And was presented to the Commission on account of the criticism of the Chairman of Commission, 51544.—Mr. Jordan was willing to make an affidavit if necessary, 51555, 51557.—Mr. Jordan was not present, but would attend if he were asked, 51660.—And the valuation had not been changed since, 51557-8.—Witness was not free to give the names of persons who had told him of facts stated in his evidence, 51553, 51559.—And therefore wished for corroboration by a direct statement, 51559.—Witness remembered having said in evidence that he knew twelve men who had perjured themselves, 51562.—Witness asked (when told that the Commissioners had been informed that these men had spoken the truth, and that witness had suggested other statements to them) whether this referred to the same twelve men, 51563.—Witness considered this inquiry irrelevant, 51564.—As also the question as to the time and place of the alleged perjury, 51565-6.—But would repeat his statement as to the perjury, 51564.—A serious reflection had been made, but only on twelve fishermen, 51567.—The statement by Mr. Jordan set forth that on the estate of Lady Larpent, at Waterdale, tenants were some of the poorest and most highly rented Mr. Jordan had known; and that when he was preparing the estate for sale the parish priest, Father Commins stated that he was opposed to the Congested Districts Board having anything to do with the purchase of the estate, and that he would oppose the migration of his parishioners, 51552.

TAYLOR, Mr. GEORGE.

See p. 111.

Marquis of Sligo's Estate.

Witness was agent to the Marquis of Sligo, and spoke to correct Mr. M'Namara's statement; in 1897 the Congested Districts Board negotiated with the fourth Marquis of Sligo for purchase of Kilteever containing 53,000 acres; conditions were eighteen years' purchase in 1899 of tenanted land 70 per cent. of which was first term rents, and thirty-two years' purchase for the grazing land, and fifteen years' purchase of kelp; witness thought Board offered about sixteen years' and thirty for grazing land and ten for kelp; in 1900, Lord Sligo asked if the Board would finish the matter, and was told the Board had no money; in 1901, Board asked if he would take less, and was told he would not; in October, 1903, after the Land Act, Board asked the Marquis to come to terms on account of the bonus, but he was then ill, and would have no more to do with the matter; the fourth Marquis died in November, 1903, and up to August, 1907, the new Marquis had not completed taking out his title to the estate, 49943.—Lord Sligo was not prepared to take eighteen years' purchase for the tenanted land unless he got thirty-two years' purchase for his grazing land and fifteen years for the kelp, and he stated that about the year 1883 the third Marquis offered Kilteever, but then 70 per cent. of the rents were not reduced, as the Land Act had no effect, 49944.—There were some cases in which terms offered by the Marquis were rejected as the tenants wished the smaller holders to get additions to their land, 49945.

MOCLAIR, Mr. THOMAS.

See pp. 112-3.

Congestion in County Mayo.

Witness was a journalist, and lived in a congested district in the centre of Kilmaine Estate, near Castlebar, where he assisted in managing a holding; all County Mayo should be scheduled as congested, and Congested Districts Board should have compulsory powers to acquire lands.

Kilmaine Estate.

Nearly two years ago Board purchased Kilmaine Estate, which comprised 2,055 statute acres and contained 93 tenants with a gross rental of £532, a poor law valuation of £545, and a population of about 635 persons; valuation of the majority of the tenants was under £5, and of none over £10; the land was very poor, most of the arable being cut-away bog and reclaimed mountain; many holdings contained only three or four acres, and much of the land was rundale; in one townland six families held between them 28 acres, divided into 65 plots, on which forty people lived; one of these tenants, with three acres of land, paid £19 a year for five acres of grazing land in the vicinity, and kept six cows and made a fairly good living; he was an eleven months' tenant who had acquired the tenant's interest and let the grazing to four or five tenants; he kept his home land in tillage, and kept his cows on the five acres in summer, hand-feeding them with green food in winter; the high price of the grazing land was due to its scarcity, 49947, 49949.—In a neighbouring townland a widow had 14 acres, about four of which were marsh; she rented six acres of grazing for £25; she kept twelve cows, and had brought up a family of fourteen, some of whom filled good positions, 49947, 49951.—Other tenants with large families lived on three or four acres of cut-away bog, their live-stock consisting of one or two cows each; only five tenants kept a horse; 112 men and youths from the district went annually to England, and saved between them £1,200 a season; the men generally left early in the year, and the women and children worked the farm; for years no one in the district had received out-door relief; Board could do little to improve the conditions; over forty of these Kilmaine tenants had once lived on 927 acres in the townland of Derryharriff and were evicted in a single day, in 1848, when Derryharriff was converted into a grazing ranch; Board had now acquired this ranch, which had deteriorated from neglect, and could provide only six new holdings and sixteen plots for additions to holdings; Board had acquired another ranch which could supply additions to other holdings, but 53 tenants must still remain unassisted unless Board had compulsory powers to purchase other grazing lands in the vicinity, 49951-2.

Compulsory Powers.

The only attempt in Mayo at dividing grass lands into holdings was in the case of an estate about to be sold to Estates Commissioners when the landlord tried to get double the interest in the estate by striping up the land at first, and then selling the tenant-right of the holdings at eight or ten years' purchase, and then selling the whole thing over again to the Estates Commissioners, but the attempt was checked at once, 49965.

Board's Unwillingness to Give High Prices.

Board sometimes lost a chance of purchasing land from unwillingness to give the price demanded, even though the tenants were willing to pay the corresponding annuity; a case had occurred recently on the Kilmaine Estate, 49956-63, 49966-70.

Industry of Population.

Sherabeen was a very poor mountainous property between the mearing of Castlebar and Westport Unions; neither oats nor rye could be grown there; here extensive drainage and fencing works had been undertaken by Board, and the people worked for wages of 9*s.* a week, in a manner sufficient to demonstrate the inaccuracy of the description of West of Ireland men as lazy and thriftless, 49953.—The people's industry was also shown by the fact that on a mountain part of the Kilmaine Estate holders had been engaged in sprouting potatoes years before the system was popular elsewhere in Ireland, 49963.—Others had had the enterprise to send milk daily to Dublin, but had to give this up because they could not afford to wait for the cheques which did not arrive promptly, 49965.

Congested Districts Board preferred to Estates Commissioners—Compulsory Powers.

Congested Districts Board was more trusted by the people of Castlebar Union than were the Estates Commissioners; Board's officials were sometimes hampered by a tenant's refusal to migrate, and Board should have compulsory powers to remove such tenants, 49953-4.

MOCLAIR, Mr. THOMAS—*continued.*

Recreation Grounds.

Board should have powers to establish recreation grounds in closely populated neighbourhoods to keep the youths from public-houses, 49954-5.

LARMINIE, Mr. ALEXANDER.

See pp. 113-5.

Congested Districts Board and Estates Commissioners.

Witness approved of Congested Districts Board's work as far as his experience went, and preferred to see congestion dealt with by Board rather than any other body, 49971, 49975-6, 49980.—Its funds and powers should be enlarged, 49981.—Estates Commissioners and Congested Districts Board occasionally overlapped; in one instance at a meeting of tenants there was contention as to whether purchase should be through Commissioners or Board, 50009-10.—All Connaught and a few of northern and southern counties should be entirely under Board, 50009.—Witness objected to compulsion causing landlords to sell at a loss to themselves, 49972-4.

Fisheries.

Fishing was the greatest source of wealth for Ireland and should receive more attention; piers and harbours and loans for purchase of nets and gear were needed along west coast, 50010.

Agricultural Education.

Agricultural education was at present almost in its infancy, and Agricultural Department's work was not very practical, 49978-9, 50010.—Improved agricultural education would enable more of the people in congested districts to get a living, but emigration from Ireland could not be dispensed with under existing circumstances, 49977, 49982.—Agriculture did not pay owing to bad prices of agricultural produce, 49983, 49996.—Potatoes were the only crop that could be cultivated in Ireland with profit, 49996.—Small occupiers could support themselves by their work, but it would not pay them to employ labour, 49984.

Emigration and Intensive Tillage System.

Proper tillage would improve the land and increase its productiveness, but it was doubtful if it would repay the labour, 49987.—Emigration of the redundant members of families would probably continue even with better education and intensive cultivation, 49977, 49988-91, 49995-6.—Emigration was a necessary evil, the emigrants' great misfortune being that they were sent away poorly educated, 49992-3.—Cattle were not nearly as profitable in 1907 as twenty years before, 49997.—Though in other countries labourers could be profitably employed in the work of raising foodstuffs for stall-fed cattle there was no prospect of this being so in Ireland, 49997-9.—Speaking principally of the West of Ireland and from long practical experience, witness thought tillage not a practical outlook except on small farms, 49999-50001.—Witness had been under-agent for Lord Lucan for the past forty years, 50002.

Rundale Holdings.

Rundale holdings originated from holdings once held in common by two or three families, which in time became thirty or forty families; under the old arrangement the landlord could not prevent the subdivision between these families, because where leases were granted they contained no restrictive clauses; a hundred years ago, when the leases were granted, it was probably not realised how important such clauses were, 50003-5.—These leases continued on an average fifty years without change of rent, 50006-7.

Lord Lucan's Experiment in Breaking Up a Large Area.

Lord Lucan had successfully broken up a large area into small holdings in the manner followed by Congested Districts Board, but he did not undertake great improvements, 50009.

LARMINIE, Mr. ALEXANDER—*continued.*

Document put in by Mr. Alex. Larminie.

Notes on Congestion in Ireland, ... Page 200

GALLAGHER, Mr. THOMAS.

See pp. 115-6.

Congestion in Carnacon Parish.

Witness farmed nine Irish acres; his valuation was £8 7*s.* and his rent £9; he represented the Carnacon and Ballyglass Branch of the United Irish League; Carnacon parish contained about 150 tenants, nine being economic, or having over £15 valuation; the rest occupied holdings of from two to eight acres and lived on their earnings as labourers in England and on money sent them from America; these small tenants did not care to purchase their holdings as their condition would not thereby be greatly improved, 50011-3.—The small patches had been constantly worked till they were worn out and liable to potato disease; the smallness of the holdings forced tenants to take conacre from graziers and landlords at from £3 to £4 per acre a year, 50013, 50022-3.—These tenants could be assisted only by additions to their holdings from untenanted land, 1,400 acres of which were at hand, but could only, it was said, be acquired by compulsory purchase, 50013-7.

Compulsory Purchase.

If the landlord were assured his net income in return he would be well off; purchase should be made by Congested Districts Board; this district was not scheduled congested, but all Connaught should be scheduled, 50018.—Grazing land in Carnacon parish was all held by persons outside the parish, 50023-5.—This land was suitable for cultivation, 50026.—Local people who needed land should be supplied first in every place, 50027.

Floods occasioned by Dams for Ornamental Water.

Bogs in Carnacon parish were all worn out and turf had to be fetched from a distance, 50018-9.—Turf and pasture were destroyed by floods which invaded all the lowlands in winter as drainage had been entirely neglected; Lough Carra could not empty its waters into Lough Mask owing to dams made by two landlords for purposes of ornamental waters, 50019-21.

High Valuation of Carnacon Holdings.

Economic holdings of £15 valuation represented fifteen to sixteen acres of tillage land, rent being about equal to valuation, 50028-33.—The land was good but rent high; the valuation was on the holding not the land, and had been raised by the reviser in witness's boyhood, 50034-9.

KILLEEN, Mr. PATRICK J.

See pp. 117-25.

Congestion in Claremorris—its Population, Valuation, and Area.

Claremorris Union, which had a valuation of £44,729, comprised three dispensary districts, viz., Ballandine, £16,050 5*s.*; Ballyhaunis, £13,081; and Claremorris, £15,597 15*s.*, 50042.—In 1901, the valuation of the whole union was £43,992; an increase of £757 was shown since that time, 50044-5.—Whereas the population must have materially decreased, 50044.—The total population, including the town, was in 1901, 25,820, 50043-4.—The population in 1901 was, Ballandine Dispensary District, 7,239; Ballyhaunis, 10,879; and Claremorris, 7,702, 50042.—There were nineteen electoral divisions in the Union, of which eleven (Ballyhaunis, Bekan, Claremorris, Cloghermore, Course, Culnacleha, Kilvine,

KILLEEN, Mr. PATRICK J.—*continued.*

Knock (North), Knock (South), Loughanboy, and Murneen) were scheduled as congested; the remaining eight divisions (of Ballindine, Caraun, Crossboyne, Garrymore, Kilcolman, Mayo, and Tagheen) should also be scheduled, 50046, 50058, 50065.—There were several very congested villages in unscheduled districts, for example, in Caraun division, the village of Cuilmore, where 274 persons were living on land valued at £298, 50059-60.—In the village of Garryredmond, were 145 persons on land valued at £173; in Meelickbeg, 30 persons on £30 valuation; in Meelickmore, 96 persons on £75 15*s.* valuation, and in Tortagh, 80 persons on £65 valuation, 50060.—Adding all these together, the aggregate would be less than £1 valuation per head; in Mayo Electoral Division there were in Corskeagh, 36 persons on a valuation of £39; in Corlisland, 17 persons on a valuation of £3; in Derronell, 65 persons on a valuation of £51; in the Tagheen division, there were in Ballydaff 51 persons on a valuation of £73 10*s.*; in Knocklbrack and Lanabold, 37 on a valuation of £49 10*s.*; in Tersaugh, 71 on a valuation of £80; in Tagheen (East and West) there were 70 persons on a valuation of £100; and in Ballindine division, in Killeen, 120 persons on £111 10*s.* valuation, 50062.—In the eight unscheduled divisions there were 11,000 acres of grass lands valued at £5,800, 50058.—Of these 3,324 were owned by Lord Oranmore and let to graziers, 50059.—If the valuation of the grass lands were taken out of the total valuation these unscheduled electoral divisions would come within the definition of congestion; the rest of them are no less congested than the examples given, and it was unfair they should have no relief, 50062.

Congestion Defined.

Witness considered that a district was congested when it contained holdings of less than £10 valuation, 50068.—The present system was to take £7 10*s.* as the maximum valuation of a holding considered as congested, 50066, 50069, 50094.—This was too low, 50066.—It was arrived at by taking the valuation per head as 30*s.*, 50066, 50078.—And reckoning a family as five persons, 50066.—Witness advised that it should be doubled, and reckoned at £2 a head, 50069.—Or £10 a family, 50069.

Parish Committee Grants.

Witness stated that there were in the unscheduled districts many occupiers as poor as in the scheduled districts, 50062, 50064, 50072, 50076.—And thought it a hardship that parish grants should not be available for them, 50062-3, 50073, 50076.—Witness wished to see areas scheduled that they might have a Parish Committee in them, 50095.—Parish Committees had been a boon in many parts of the country, in teaching hygiene and sanitation; and encouraging the observance of the rules by the conditions on which they gave grants, 50062, 50096.—The grants could not be given to any family with over £7 10*s.* valuation, unless it was in a congested district, scheduled as such; and in congested districts they were generally given to the very poor, to those under £15 valuation, 50094, 50098-9.

Suggested Alterations in Scheduling.

If the whole of Connaught were scheduled, it would meet witness's complaint, 50067.—Or if the Board were free to apply itself to congestion, wherever it existed, without being bound by a definition, excluding districts comparatively prosperous, where congestion was found, it would do as well, 50071, 50079-81.—Witness would only speak as to his own unions, 50082-4.—Because his knowledge was confined to that district, 50083.—And he did not wish to take too large a scope, though he was interested in the affairs of Ireland as a whole, 50088.—He gave his evidence with regard to the union he knew, 50089.—And expected that others would give evidence of their unions, 50090.—The province of the Commission was to put the evidence together, and draw a general conclusion, 50085, 50091.—Under present rules, the Board could not deal with the grass farms, 50071.—And there must be some alteration, 50077.

Taxation on House Improvements.

Witness attributed the increase of valuation in the union to new buildings, 50046.—These improvements in poor men's houses were taxed, £1 2*s.* 1*d.* on every £5 increase in house valuation, 50046.—Or 4*s.* 5*d.* in the pound, 50047.—This was very unpopular, 50047, 50055.—And led farmers to refuse parish grants for house improvement, lest they should lead to increased taxation, 50046, 50051.—This farmers would prefer to contribute to improvements rather than be taxed on them, 50048-9.—The Irish peasant would make no effort towards improvement if he were to be taxed for it, 50046.—Taxation on improvements lessened the burden on those who made no improvements, 50054.—The dislike to this form of taxation was common to England and Scotland as well as Ireland, 50050, 50055, 50057.—In England the landlord made improvements, 50050.

Lord Oranmore's Grass Lands.

As grazing lands in Claremorris were excellent for tillage, and the congested tenants lived for the most part on bad low-lying lands; some years previously, Lord Oranmore, when approached by his tenants, agreed to sell his land in the neighbourhood of Esker and Ballindine, 50099.—But refused to sell the grass lands on the plea that the price would not give him his present income, 50099, 50116.—About the same time he took over the grazing ranches, which had been in the hands of graziers on the eleven months system, and stocked them; but though the steward, Grant, was a good judge of cattle and sheep, and appeared to make the business pay, Lord Oranmore was discouraged by the fluctuation of the cattle market, and came to the conclusion that the business was better worked by several graziers, and returned to the old eleven months system, dismissing Grant; witness stated that if landlords tried to stock their ranches themselves they would soon be willing to sell at a fair price, 50099.

"Fair Price" of Grass Lands.

Witness thought that twenty years' purchase was a fair price for grass lands, 50099, 50105.—By this he meant twenty years' purchase on the rent, 50100.—But he could not say what was a fair rent for grazing lands, which might one year be worth 30*s.* an acre, and another year only 22*s.* 6*d.*, 50101.—Witness did not understand how the Board, or the Estates Commissioners estimated the price of the grazing land they bought, 50104, 50106.—And he thought Mr. Doran, or Mr. Stuart of the Estates Commission, having experience, could fix a price, 50106.—He arrived at his calculation by taking the same data as for tenanted land, 50105.

Fair Price of Tenanted Lands.

Witness took as his basis of calculation, a £5 tenancy; if a landlord receives twenty years' purchase on a £5 tenancy, he obtained £100; this, with the bonus of three years' purchase, made £115; this invested at 3½ per cent. would bring in £4 0*s.* 6*d.*; but he would be as well off as before, because he would not have to pay ten per cent. for collection of rent, and if the tenant went into Court again, he would get his rent reduced by three shillings in the £, 50105.—Witness put the expenses of collection at ten per cent. because he knew the agent must be well paid, 50127.—But he had only hearsay evidence on which to base his opinion, 50128.—That was the terms of the Land Conference, 50129-30.—But there were other opinions on the matter, 50130.—It would be unfair to fix the price of land entirely from the landlord's calculation, 50108.—The landlord should give way a little, 50110, 50124.—The landlord, according to the tenant's showing, wanted too much, 50109.—The landlord should bear a portion of the loss, if there were any, 50114.—The tenant had been paying for the land, whereas the landlord had never bought it, 50111, 50115.—The tenant had give way, 50125.—Witness would think it hard if he had to suffer as the result of the State's policy, 50118.—No private individual should suffer, if landlord and tenant were both to be satisfied with their bargain, 50109.—The State must pay and witness considered that the State paid for the sake of giving the landlord an inflated price, 50122.

KILLEEN, Mr. PATRICK J.—*continued.*

Question of Selling Price, including Tenants' Improvements.

The land of Ireland, being improved, had a certain selling price, 50135.—It had increased in value, and in price, since 200 years ago, 50139-41.—Many tenants reclaimed their holdings prior to 1881, 50143.—At which time it was possible to charge a tenant extra rent on account of his improvements, 50147, 50151.—While those who had reclaimed since 1861, 50144.—Had not been rented on improvements, 50146, 50151.—The Act of 1881 was passed to remedy this injustice, 50152, 50162.—The selling price demanded by landlords, included, witness thought, the improvements confiscated before 1881, 50153.—Though rents were not based on tenants' improvements. 50162.

Increased Price of Land in spite of Reduced Rents.

Prices of land had been continually rising, 50182.—This was not because land had been improved, but because stock-rearing had been more profitable since the exclusion of Canadian cattle, 50136.—And because Irishmen suffered from land hunger, and were over anxious to purchase, while landlords held back in the hope of better prices, 50174, 50178.—This naturally raised prices, though in other markets it was not always a good plan to wait, 50175.—Land was higher now than ever before, 50169, 50171.—It had risen in price between the passing of the Ashbourne Act, 50170.—And again considerably, on the passing of the Land Act of 1903, 50169, 50171, 50177.—And had continually risen since then, 50172-3, 50177.—Land hunger had always existed in Ireland, but it had increased recently, and prices developed in consequence, 50179, 50180-1.—Under the Land Act of 1881 landlords were satisfied to sell at 17 or 18 years' purchase, 50153, 50179.—And yet there were few or no negotiations for purchase between landlord and tenant, 50179.—These prices were on First Term rents, 50154.—Under the Ashbourne Act prices had been 14 to 18 years, on first term rents, 50170-1.—Witness considered that there would be a larger number of years' purchase on second term rents than on first, 50154.—It was a known fact that the price of first term rents was 20 years' purchase and of second term 23, 50157.—There had been cases where the purchase on first term had been 14 years and on the second term 17, 50190.—Landlords now wanted 26 or 27 years' purchase where they had been willing to take 18, 50186—or 26 or 27 where they had been willing to take 17, 50191.—Captain Sheffield had been willing to take 18 and now wanted 25, 50188.—In all these cases the higher price was for second term rents and the lower for first, 50187, 50189, 50192.—The decrease from first to second term rents was 3*s.* in the £, 50106, 50155.—It was 2*s.* in the £, 50193.—A man buying at 20 years' purchase on first term rents would get a reduction of 7*s.*, 50152, 50193.—The tenants on the Nolan-Ferrall Estate under the Act of 1903 got 7*s.* in the £, and 5*s.* on second term rents, or 23 years' purchase, 50159-60.—William Ferrall sold a property of which the rent was £5 and got 20 years' purchase on a first term rent, in addition to a bonus of three years' purchase, 50101-2.—Witness had in his mind a definite estate when he spoke of a rise from 17 to 26 years' purchase, 50191, 50202—and had heard of this from the tenants, 50202—and in the case of 18 years' purchase being asked formerly, whereas 28 was now demanded, 50194, 50200—in addition to the bonus, 50201-2.—The rents were in both cases, both at the earlier and later dates, first term rents, 50203, 50205-7.—Witness did not think the tenants had had their rents reduced between the times of the lower and higher prices, 50203-4.

Considerations affecting Price of Land.

The 18 years' transaction was in 1898, 1899, or 1900, 50194.—At that time purchasing tenants had to pay 3½ per cent. on the money, 50195.—The landlord was paid in Land Stock, 50196—which then stood at 112, so that when he got £100 of Land Stock he really got £112, which, with three years' bonus, made £115, 50198.—These considerations must be taken into account, together with the fact that the rents generally affected now were first term rents, whereas then they were second term rents, 50198.—Land Stock at the present time stood at £86 or £87, 50212.—It was depreciated under the Ashbourne Act, 50210.—But the bonus now compensated fully for the 12 per cent. premium then, 50211.—The bonus may be three or four years, 50199.—Landlords were now paid in gold, 50199—and had opportunities for profitable investment (in Land Stock), 50212.—Under the Act of 1903 an owner might clear off his mortgages, 50214.—This was a great advantage to landlords, some of whom were paying 6 per cent. on mortgages, 50215.—Witness did not understand the procedure of the Court in fixing second term rents, 50149.—Generally when a man had improved the land he was evicted, 50150.—Witness supposed that a second term rent implied a decrease in the value of the property, 50166.—A second term rent was generally three shillings in the £ less than the first term rent, 50106, 50155.—Witness admitted that in fixing a second term rent credit was given to the tenant for improvements, 50161.

Grass Land and Landlords' Improvements.

Witness found it hard to answer the question as to whether the State, in buying grass lands from a landlord, should compensate him for money spent by him or his predecessors on improving the land, 50165.—But he agreed that the landlord had already reaped the benefit of those improvements, 50166.—Witness did not think it fair that a landlord should be deprived of land which he had improved and made profitable without receiving the same income he had before the sale, 50167.

Migratory Labour Superseded by "Conacre" Tenancy.

For years men and boys from Curraghadoney, Crossboyne, and Ballandine had migrated annually to England as labourers, saving during the season as much as £9 to £12 each, or in other cases £15 or £16 after twelve months' toil and privation; now most of these men stayed at home and tilled what used to be grazing land; in England they suffered great hardships, having to sleep in out-houses, on bags instead of beds, 50183.—This was distasteful to them, and they now stayed in Ireland as "conacre" tenants, 50184.—Owing to the competition for conacre land (which was sold in plots of an acre or so), the price rose in some cases to £7 or £8 an acre, 50183.—At the present prices of oats, turnips, and straw, the "conacre" tenant must work at a loss, especially as the crop was considerably damaged by rabbits and game, 50184.—Farmers tried to improve grass land by letting it out in conacre tillage, 50162.—Lord Oranmore had been more successful in letting his land in conacre than in his grazing experiment, 50099.—He reaped a three-fold benefit, getting £4 to £6 per acre for his conacre, getting his land improved by tilling, and fattening his game at the tenants' expense (for reductions were not made even if half the crop were destroyed by game); the tenants worked in the hope of having some fodder for their cattle during winter, but this might not result in any profit, 50184.—Migration had diminished, but not ceased, in the villages of Curraghadoney and Crossboyne, 50185, 50186.—The rents were paid from the land round the tenants' houses, and the shopkeeper by gifts from America at Christmas, 50186.—Compulsory powers were needed to induce these landlords to sell, 50186.

High Rents under the Congested Districts Board.

It was the duty of the Board to see that tenants did not enter into foolish bargains, 50221, 50232.—It had not in this county adopted the responsibility, 50233, 50236.—And in some cases tenants had paid too much for their land, 50233.—And found it hard to pay their annuities and live in moderate comfort, 50221.—Many farmers who had received increased areas of land were no better off, owing to paying high rents, and to increased valuation placed on their houses, 50221.—49 years' purchase was too high a

KILLEEN, Mr. PATRICK J.—*continued.*

price to pay, 50234, 50238.—And involved tenants in a responsibility they are not able to meet, 50235, 50238.—In mentioning 49 years, Mr. Kelly had in view a particular estate, 50239.—Which witness preferred not to name, 50240.—The forty or fifty years' purchase was on the valuation, 50234, 50238, 50243. —Witness could not say definitely that that sum was paid by the Board, 50243, 50245.—If the Board was anxious to find holdings for congests, and was pressed to do so, it might, unless it had compulsory powers, be obliged to pay high prices, 50246.—The tenants on the Isidore Bourke Estate found their rents too high; as examples, witness gave James Regan, Curraghleigh, 20 acres, including four acres plantation, rent £18 0*s.* 2*d.*, valuation £18 5*s.*; John Reaney, Curraghleigh, 18 acres, rent £16 2*s.* 6*d.*, valuation £11 15*s.*; Thomas Lavelle (herd on the farm Ballybehenry), area 19 acres 4 poles, rent £9 15*s.*, valuation £11 13*s.* 2*d.*; this man had no house built, yet paid a £40 fine, 50221.—These were all enlarged holdings, 50223.—And tenants were struggling to meet the rent, 50224.—It was a great advantage to the tenant to have good land added to his holding, 50226.—And this naturally increased the annuity, 50227.—When this estate was divided, Mr. M'Clean pressed tenants to take land, 50227-8.—Tenants would pay large sums to each other for tenant-right, 50229. —And a man getting an enlargement will not expect, in justice, to get the tenant-right for nothing, 50230. —And if he had a house built, he might be charged for the building or improvement of it, 50231.—Witness complained that the conditions made at the sale of the Nolan-Ferrall Estate had not been carried out by the landlord or by the Board; the tenants, who had been promised a reduction of 7*s.* in the £ on first term rents, and 5*s.* on second term rents, 50159-60, 50246.—Were still paying their old rents, in some cases £4, or £5 and taxes, though the bargain took place six years previously, 50246, 50248.—The title had only just now been completed, 50249.—And the Board had made improvements, 50251.—It was difficult to make improvements until the title was assured, 50252.—There had been difficulties between the landlord and the Board about the home farm at Loughboy, and the Board said that the sale had not been completed, though they collected the rents, 50248.— The tenants thought it too long to pay the old rents for eight to ten years, 50248.—The Board was expending the whole rent on improving the holdings, and of this the tenants had the benefit, 50247-8.

PROPOSED CONSULTATION OF BOARD WITH TENANTS.

Witness thought the Congested Districts Board, when acquiring grass land for enlargement of holdings, should consult the tenants to be benefited, as to the price paid for the land, 50253, 50256, 50258, 50260.—Not every tenant should be consulted, 50261-2. —As that would prevent any sale, 50261.—But the more intelligent, so that they should be aware, when their holdings were enlarged, of the responsibilities they would have to meet, 50258, 50262.—They could not be given information about holdings not yet fixed, 50255.

DRAINAGE OF THE ROBE.

Witness asked the Commission to inspect the River Robe, which rose in the Dillon Estate, in the parish of Bekan, and flowed through estates now in the hands of the Board, including the Nolan-Ferrall and Tighe Estates, and others, as the Cranmore, Knox, and Fitzpatrick Estates, which witness hoped would soon be under the Board; the river flowed through a large part of the Union, and the land on its banks was liable to severe floods, not only in winter, but in summer; from Lough Mask to Tagheen, a distance of twenty miles, the river was deepened and improved by the Board of Works, under Lough Mask Drainage Board, forty-five years previously; this portion was under the Drainage Trustees, and was in an improved condition, but the part between Tagheen Bridge and Brickens required deepening, widening, and improving, since it was the outlet of large tributaries draining the congested divisions of Claremorris and Cloghermore; the drainage should be done as a whole, and not in sections, for it was alleged that the Board's operations on the upper reaches had caused more flooding below; and tenants had threatened legal action against the Board, if Lord Oran-

KILLEEN, Mr. PATRICK J.—*continued.*

more allowed the river bed to be lowered at Castlemargarrett, in his demesne, a plan which would provide an effective fall as far as Brickens, 50263.

ACTION OF THE CONGESTED DISTRICTS BOARD IN THE SCHEME.

Witness thought that the Congested Districts Board, which had done so much towards draining the country, should have commenced its drainage operations with the River Robe, instead of with the tributaries of that river; the Board had suggested that the drainage between the source and Tagheen Bridge could be done for £3,500, and had offered to subscribe two-thirds of that sum, 50264-5.—And Lord Oranmore would pay his share on lands outside, but not on his demesne, 50264.—The offer of the Board was conditional on the formation of a Drainage Board, which would undertake the work in accordance with plans approved by it, and by Lord Oranmore; would levy one-third of the expenditure (£1,167) on the lands benefited, and be responsible for the future maintenance of the river, 50264, 50266. —The Claremorris District Council held a special meeting, and agreed to the above arrangement, 50264, 50267.—But they were unable to obtain from the Board of Works the necessary loan of £1,167, 50263, 50271.—The loan was refused, pending the report of the Arterial Drainage Commission, 50263, 50270.— It was left to Father M'Hugh to arrange with the Board of Works and the Arterial Drainage Commission, 50269.—The Arterial Drainage Commission approved the draining of the river, but refused to take evidence, on the plea that the Commission was not formed to go into special cases, 50264.—The district was to blame for not taking advantage of the Board's generous offer, but it was impossible to raise the loan, 50271.—The inhabitants manifested an individual interest in the drainage of the river, and hoped to obtain their end through this Royal Commission, 50263.

HERAGHTY, Mr. THOMAS.

See pp. 125-8.

CONGESTION REMEDIED BY DISTRIBUTION OF GRASS LANDS.

The Ballinrobe Union was as much congested as any rural district in the county, 50272.—It should be scheduled and placed under the Congested Districts Board, 50273, 50352.—The people were very miserable, 50274.—And compulsory purchase would be the only means of acquiring grass land and relieving congestion, 50275.—The Congested Districts Board should have more power and facilities to purchase these places, as they were the only body which had made an effort to relieve congestion, 50275.—If all the land held in the county on the eleven and twelve months' system were acquired by the Board or the Estates Commissioners, it would be insufficient to relieve congestion, 50335.—The Commissioners' returns showed that the grass land in Ballinrobe would be insufficient to relieve the congestion therein, 50335-7, 50359.—The land, when acquired, should be divided first among the tenants of the townlands on the estate containing the grass land, and tenants on adjoining estates, 50276-7.—And, if any remained, it should be given to sons and daughters of the people on the estate, 50276-7.

ACQUISITION OF GRASS LANDS OF JUDICIAL TENANTS.

Judicial farms should be acquired compulsorily, 50278, 50281-2.—Equally when the judicial tenant was a tenant purchaser, if he occupied a farm from which previous holders were evicted, 50282.—But witness would except a man who had already concluded a purchase, 50281.—He knew of no grazing farms held by purchasing tenants, 50280.—If necessary, for the benefit of the country, the land of a purchasing tenant should be acquired compulsorily, 50285.—Witness was willing to apply compulsion to the landlord, 50286-7.—The landlord held in fee, 50287A.—Land, however held, or by whomsoever held, should be acquired compulsorily in case of necessity, 50290.—Certainly so, if the holder was a shopkeeper with a grazing farm, 50291.—This opinion was shared by the highest authorities, including Mr. Doran, 50292.

HERAGHTY, Mr. THOMAS—*continued.*

Acquisition of Cut-away Bog and scattered Lands of Large Tenants.

Witness thought the Board should have power to acquire cut-away bog for the purpose of forestry, which would eventually enrich the country and improve the climate, 50294.—And that any tenant having a compact holding of fifty acres should relinquish other small patches, scattered amongst the holdings of small tenants, holding four or five acres, 50295-6.—And these should be given to the small adjoining tenants, 50296.—An instance of a tenant of this kind was to be seen at Brownstown, in Ballinrobe, on the estate of G. Browne, 50297-8.—He should obtain "Court value" for these patches, 50296.—"Court value" was "fair value" according to the Land Act of 1881, 50296.

Acquisition of Land, at its Letting Value, previous to 1881.

Witness suggested that land should not be acquired at the present letting price, but at a price calculated on the rent paid for it before 1881, 50300, 50310.—Twenty-five years ago, 50300, 50301.—When the land was held by Englishmen and Scotchmen for agricultural purposes, 50299, 50304.—For it would be used for agriculture by the congested tenants, who were to receive it, 50304.—These Englishmen and Scotchmen took the land when the former tenants were evicted, 50299.—These men all failed to farm the land profitably, 50302.—They all left when agricultural prices fell, 50299, 50302, 50305.—They left in poverty, 50309A.—And had impoverished the land by working it with artificial manures, 50308.—On the English and Scotch systems, 50307, 50309.—Witness did not know whether they left, owing arrears to their landlords, 50304.—That system was not a permanent one, 50305.—And the present system was risky, and if the State paid auction prices, it would embark in a risky transaction, 50306.—But not if it purchased at what it let at before 1881, 50311-13.—The Land Act of 1881 cut down the letting value of poor bog land, and reduced rack-rents, 50314-5.—But did not reduce rich grass land, 50314.—Witness did not therefore contemplate that the price to be given for grass lands would be more than their present letting value, 50315.—He intended his proposition to refer only to holdings outside the operation of the Land Act, 50316.—Witness considered that it was just to dispossess owners and give them less than their present income, because the land had been wrongfully taken from its former owners, and the State (being a party to that wrong) should endeavour to redress it, 50317.—The former tenants, driven out to cut-away bogs, should be relieved, and have their grievances redressed, 50321.—The procedure would be just when the tenant to be dispossessed was a judicial tenant, 50319.—If it was a shopkeeper, who had nothing to do with the past, but had bought a piece of land which was in the market, he should be removed, that the State might redeem it for a judicial tenant, 50319.—If it was a shopkeeper, who had made his money by trading and had risen from a position where he had not a shilling, he should be evicted and compensated if he lived in a village where the inhabitants were miserable beggars, 30325.—He should suffer more or less, as he went into the position with his eyes open, 50326.—But witness would give him his interest, 50327.—Witness did not think the State could ascertain the present income of the dispossessed tenant, 50238.—Witness would not give a dispossessed holder of grass land a sum bringing him in his present income, but the price he himself had given for the land, 50329-30, 50331.—The land was bought as a speculation, and the buyer should not be compensated for profits he received at the present day, 50331, 50334.—Witness was aware that both parties in Parliament were anxious to relieve congestion, 50332-3.—But he did not think they were bound to pay more than the purchase price the tenant himself had paid, 50334.

Proposed Transference of Funds to Congested Districts Board.

Witness proposed that the funds of the Agricultural Board should be handed back to the Congested Districts Board, so that those bodies could be amalgamated, 50339-40, 50342.—The bodies would then

HERAGHTY, Mr. THOMAS—*continued.*

only need half the number of officials, and a great saving would be accomplished, and the state of the country improved, 50342.—The purposes for which the bodies were formed were not carried out, 50343.—The Congested Districts Board did the work better than the Agricultural Department, 50346.—To which the work was transferred some years ago, 50344-5.—The Agricultural Board frequently wasted public money, 50347.—Witness really intended to suggest the re-transference of the work to the Congested Districts Board, 50348.—Because the agricultural schemes would then be more beneficial, 50348.—Witness was himself a member of the Agricultural Committee, whose suggestion was ignored by the Board, while the Board's own plans were useless, 50349.

New Tenancies since 1903 to be void.

Witness suggested that leases or assignments made since 1903 by landlords, for the creation of new tenancies, should be illegal and abortive, 50350.—Some underling in an office might have a bogus lease drawn and lodge a claim when the Board came to purchase, 50351.—Witness instanced a case on the Claremorris Estate where tenants had agreed to purchase through the Estates Commissioners, when a Mr. Good, the chief clerk of the office, had claimed by an assignment several hundred acres which was at one time the demesne of the Claremorris family, 50353.—Mr. Good had bought a portion of land from a bailiff on the estate, 50353-4.—And by this means coming in as a tenant, 50355.—Was able to purchase a large part of the property, 50353, 50355.—Mr. Good was an agent, 50357.—Living fifty miles away, at Westport, 50355, 50357.—And the transaction came before the Court, 50355.—When Judge Morphy declared the whole proceeding to be illegal and a fraud, 50356.

STEPHENS, Very Rev. CANON.

See pp. 128-30.

Congestion in Ballinrobe.

The Congested Districts Board should have compulsory powers, and funds for the relief of distress, 50369.—Witness suggested that the parish of Ballinrobe ought to be scheduled as congested, 50361, 50369, 50394.—And also the county generally, 50394.—And the whole province, 50369.—In the parish of Ballinrobe there were 4,000 acres of grass lands, on which bullocks were fattened, and many families were living on extremely congested holdings, on intermixed plots immediately adjacent, 50361, 50364.—In the Kilmaine district of the Bingham Estate there were 2,374 acres in the hands of three farmers, and round about, on bog, on rocky land, there were more than sixty families on holdings broken into 707 separate patches, 50361.—There was not an economic holding on the estate, and the peasants, evicted from the lands now under grazing, worked as labourers, 50367.—The uneconomic holders were descendants of evicted tenants, 50365.—In the village of Cregduff, there were twenty families whose holdings were scattered in 352 patches; in Cloonereen, eighteen families had 127 patches of bog reclaimed by themselves and their predecessors; in Rosslaura, once a penisula in a bog, eleven families held 169 separate patches, chiefly bog reclaimed by themselves; there were a few cottiers, a few herdsmen, and a few labourers, but no labourer's cottage in the Union, 50361.—In Knocknadriume, eleven families had fifty-eight patches.

Clause 75 of the Act of 1903.

Witness suggested that Clause 75 should be expunged from the Land Act of 1903, 50361, 50383.—Because, although the district was not scheduled, the valuation was only kept up by the grass lands, 50368, 50369.—The clause provided only for the advantage of those whose rateable value did not exceed £5, whereas many of those whose valuation was over £5 were equally in need of help, 50380.—Witness thought it better first to relieve those whose valuation was small, 50381.—Valuation was no test, holdings of £5 might

STEPHENS, Very Rev. CANON—*continued.*

be economic, 50382.—The section, though only permissory, was a blot on the Bill, 50384.—It might be enlarged over £5—the Land Act was simply meant for the redistribution of grass land as a whole, 50368.

Distribution of Grass Lands, and Migrants from a Distance.

Migration was a relief question, the line was hard to draw, but it was drawn at the wrong place, 50381.—Witness considered that the importation of strange migrants would be to make the existing distress permanent and irreparable, 50361.—By strangers, he meant persons from other localities, 50362.—The poor farmers of the district, some of whom had been evicted from the land, had the first claim, 50366.—They might be put back on moderate holdings, and the few who still had uneconomic holdings might work as labourers, 50367.—The existing holdings should first be made economic, before sons of tenants were considered, 50386.—The holders on the property purchased should be first benefited, 50388.—Then the sons of tenants whom ight wish to migrate to economic holdings should be provided for, 50387.—Witness considered it unreasonable to import into the Kilmaine section of the Bingham Estate poor migrants from other districts, while the holders on the estate were in the abject poverty he had described, 50391.—The section was permissive only, but permitted an injustice, 50389, 50390-2.—It would be a step in the right direction to raise the valuation from £5 to £10, 50393.—There was much dissatisfaction among the peasantry at the prospect of migrants from a distance, which might, witness thought, become dangerous and uncontrollable if the migrants were introduced, 50369, 50378.—The Bingham Estate had been recently purchased from the Earl of Lucan by the Congested Districts Board, 50361, 50370.—He did not know the price paid, 50371-2.—He was not aware that local people had been consulted; tenants were eventually asked (at a meeting at which witness was present) what price they would offer for the land, if acquired, and they consulted, and offered thirteen years' purchase, if their holdings were to be economic, 50373.—Witness did not in any way influence or advise the tenants, 50373.—The estate was within 1½ miles of Ballinrobe, 50371.

Drainage of the River Robe.

The constant flooding of the River Robe was the cause of much distress, it flooded thousands of acres of the best lands in Mayo, from its source in Bekan to Lough Mask; the Drainage Commissioners in 1847 reported the total area of flooded lands in the district to be 14,886 statute acres; the report was drawn up by Mr. Harding, an eminent engineer, who estimated that the increased value in the lands, resulting from drainage, would be 6*s.* 3*d.* per statute acre, amounting in all to £4,632, and that the increased value of the lands would yield a profit of 8½ per cent. on the outlay, independent of the value of mill power, brought into operation, 50373.—The mills were never brought into operation, 51373.—They were removed, and their sites can still be pointed out; the floods still continued and caused poverty, and also ill-health; many thousand pounds had been profitably expended by the Congested Districts Board in profitable works; on quays at Ballinrobe, and weirs and locks and bridges on the Robe; if a few thousand pounds more were spent in making the river navigable from Lough Mask to Ballinrobe, and the people from the mountains of Partry would be within reach of a market; the town of Ballinrobe would regain its former prosperity, and the neighbourhood would be made more attractive to tourists; the question of deepening the river from Lough Mask to Ballinrobe was one of small outlay and large profit; Ballinrobe once had tannery, brewing, tobacco industry, spinning, flour and tuck mills, and many cottage industries; witness had brought the question to the notice of the Agricultural Department, which had reported at length and sympathetically, but said in the end, that it was not a question for the Department, 50374.—Witness was not aware that evidence on the subject was tendered before the Drainage Commission; he himself had applied to the Board of Works, and was told

STEPHENS, Very Rev. CANON—*continued.*

that the money could be obtained as a Treasury Grant or as a loan granted on the application of a Drainage Board, but that there was little chance of either, 50375.—Why the local landlords objected, witness could not explain, except that one thought it would interfere with his privacy, 50376.—Witness believed that the scheme of drainage would be an advantage in every way, 50379.—The former scheme broke down because fissures in the limestone swallowed up the water between Lough Mask and Lough Corrib; this could now be remedied, with some hundreds or thousands of tons of cement, 50377.

Sale of the River to Lord Ardilaun.

A question should be asked in Parliament as to whether the Grand Jury of Mayo were right in selling the river to Lord Ardilaun; if salmon were allowed up from Lough Corrib, Lough Mask might be one of the chief fisheries in Ireland, 50377.

FALLON, Rev. JOHN.

See pp. 130-4.

Scheduling by Townlands.

Witness recommended a change in the law as regarded scheduling congested areas; as the law existed a large number of townlands or villages, though in reality congested, could not be scheduled, and therefore could not come under the Congested Districts Board; for example the village of Clonlavish, in the parish of Knock, was the most congested in the parish, having twenty houses only a few yards apart, with holdings varying from £3 to £4 valuation; this was no exceptional case, and the law should be amended to include them, 50397.—Witness suggested that the Board should be empowered to schedule congestion wherever it existed; this, after official inspection, by Mr. Doran, or other officials, 50397-8—And the scheduling should be by townlands, 50397, 50399.—Witness was glad to hear this was the rule in Scotland, 50400.

Representation of Congested Districts on the Board.

Witness regretted that there was no representative of the congested districts of County Galway, and of the western seaboard of County Mayo, on the Congested Districts Board, 50400.—He thought there should be one member for each county, as it was unwise to have a large Board, 50400, 50402.—The County Councils should be empowered to select a representative, either within or outside their own body to represent them on the Board; the County Councillors were fairly intelligent representatives, and could give valuable assistance, but he would not limit representation to them, 50402-3.—He did not mind whether the representatives were elected or nominated by the Council, 50403.—He did not think one member from each congested county would make the Board unwieldy, 50405-6.—Witness did not recommend the nomination of those members by Parish Committees, 50434.—Though these were well informed as to local needs, 50433.—But Parish Committees only existed in certain parishes, 50434.—And there were congested parishes which had no committee, 50435.—The grants to Parish Committees were annual, and might be discontinued, 50434.—It took some time to master the work of the Congested Districts Board, 50439.—But witness thought that a man who did his duty would be re-elected by the County Council, even if he did not at first obtain many advantages for his district, 40340.—Witness would prefer six years' tenure of office to three, as it gave a man time to learn, and also to use his knowledge, 50443.—Witness would give no opinion as to the advisability of the same persons being at once a member of the Estates Commissioners, the Congested Districts Board, and the Department of Agriculture, or any two of these bodies, 50407-8.

FALLON, Rev. JOHN—*continued.*

Operations of the Congested Districts Board in Connaught.

Witness did not advise the amalgamation of the Congested Districts Board with the Estates Commission, being of opinion that the Board should deal with the purchase and distribution of land, 50408.—In Connaught, Donegal, Kerry and West Cork, in the purchase of estates where there was little improvement to be made, land might as well be purchased through the Commissioners as the Board, but in dealing with estates where the holdings must be improved, or remodelled, and where questions arose of turbary rights, rights of way, deeds of assignment, etc., the experience of the Board and its officials made it the only suitable authority, and it would be a calamity if the Board were broken up, and its experience not made available, or if it were amalgamated with the Estates Commission; the Board had been operating in a successful manner in the parish of Knock for nine years; Mr. Doran, by his courtesy, sympathy, and fairness, had made the Board trusted and respected; witness would not advise that the Estates Commissioners should operate in Connaught, 50409.

Relief of Congestion by Acquisition of Grass Lands.

Witness recognised that the problem of obtaining more, and better land for congests, was a difficult one; if there were untenanted lands or non-residential farms in the neighbourhood, the Board should have compulsory powers to acquire them, and should parcel them into lots of eight or ten acres, to be distributed among the smaller holdings, for the purpose of making them economic; this plan had been successfully tried on two farms in Knock, and was likely to succeed generally, 50448-9.—This was done by the Board, 50448-9.—It was likely to succeed, because it would not entail much expense, the tenant already possessing house and outbuildings, so that the Board would not be called upon for large sums, nor the tenant for more rent than he could expect to pay, while the extra land would benefit him considerably, 50449.—Witness thought the old house, if fairly good, would suffice for the new holding, 50450.—The tenants (now obliged to pay high rents for con-acre, and to buy grazing) would be satisfied with extra land, not immediately contiguous to their holdings, 50450-1.

Common Grazing.

Witness did not advise common grazing in the vicinity of congested districts, as he thought it not likely to be a permanent arrangement, 50452-3, 50456, 50463.—But, at any rate, it gave tenants the management of their own affairs, 50467.—Permanent possession alone, gave the peasantry on interest in the land, and was what witness wished, 50456.—It would be better to have common grazing than to leave things as they were, 50461-2.—If the acquisition of permanent holdings was impracticable, 50460.—Witness had no objection to the plans, 50460, 50464, 50466.—But did not see his way to managing it, 50466.—He did not know it was common in Europe, 50458.—And was the basis of land tenure in Scotland, 50459.—It would be easily managed if you got good managers, 50465.

Relief of Congested Townlands, not adjacent to Grass Lands—Migration, etc.

The greatest difficulty was in the case of townlands (such as some in Swinford Union) not within a ten mile radius of grass lands; migration was a remedy for this, and was much less distasteful than formerly to the peasantry of Western Ireland, this witness attributed to intercourse with America, 50467.—Whence many emigrants returned each year, 50467-8.—Sometimes, in witness's parish, as many as a hundred in a year, chiefly girls, who had emigrated at sixteen or seventeen, and returned in five to seven years, having saved £100 to £200, which, in Mayo, made it certain that they would be able to marry, 50469-70.—Very few men returned, nor did they send back so much money as the girls, 50471.—Witness did not anticipate a bad reception for emigrants if the wants of local holders were first supplied, 50471.

FALLON, Rev. JOHN—*continued.*

High Valuation discourages Migration.

The great objection of the tenant farmer to migrate was his reluctance to face high rents, high rates, and increased working expenditure of a new, larger holding; this, witness considered, was a wise reluctance, 50467.—A number of small holders in Knock had been offered larger holdings if they wished to migrate; five of them migrated, but the others, after inspecting the new holdings and considering the annuities, declined to do so, being frightened by the high rents, 50471.—Those who consented to migrate, witness had visited; witness thought that a large, prosperous farmer should be given every encouragement to migrate, as he would probably succeed in his new farm, but the experiment of migrating poor tenants into new holdings of fifteen or twenty acres provided with new fences and houses, was dangerous, 50472.—Because the tenant had to pay an annuity, 50 or even 100 per cent. above his neighbours, who had their tenant right, 50473.—As an example, witness gave the case of a migrant, planted by the Estates Commissioners on a farm for which he paid £1 5*s.* an acre, while his brother, who had a tenant right, and lived on the other side of the road, was paying 11*s.* or 12*s.*, 50473-4.—The brother had a house, but the new tenant had to build one, 50474.—Witness thought he had no grant towards his house, 50476.—And he would also have to pay high rates, 50474, 50477.—The new slated houses also were rated upon a high valuation, 50477. Perhaps £2 extra, 50478.—This handicapped him in the race for the 68½ years, 50477.—Witness knew a woman, a migrant, who paid £4 18*s.* in rates alone, on ten Irish acres, 50480-1.—And a man paid £4 6*s.* on a valuation of £20, and an area of sixteen acres, 50481.—This was a great grievance, and concerned the Government, not the Board, 50477-8.—Which had made superfluous efforts to keep down the annuity, and had made it as small as possible; but it was the high valuation which handicapped the poor man, 50481-2, 50483-4.—The tenant who had an enlarged holding, as well as the migrant, had a larger annuity, and had to build fences, 50473.—When the Board took a new farm they must keep the old valuation, and the houses were valued besides, as an extra, 50478.—The migrants needed all their resources for the working of the land, 50483.—Rates must naturally rise, with the advance of civilisation, and would be a burden upon the ordinary landholder, but would press more heavily upon a migrant, 50484.—Witness considered that the high valuation pointed to the fact that too high a price had been given for the unoccupied land, afterwards divided, 50476.

Deferred Taxation of Houses.

Witness recommended that the migrant for whom a house was built should be rated and taxed on his land but not on the house, for a term of years, for fifteen or twenty years, 50478-80, 50485-6.—This would give the migrant a chance of starting on a fair level with his neighbours, and unless he could do so, migration would be attended with disaster, 50483.—The tenant had been assisted to migrate because he was otherwise unable to live, and he should be given a chance of living, 50487.—Witness would not except in the same manner tenants who had built their own houses, or tenants with enlarged holdings for whom the Board had built houses, 50486-8.

Work of the Parish Committees.

Witness considered Parish Committees most valuable in dealing with persons living on fairly economic holdings and showing an apathy with regard to improvements which was a survival of the time when improvements entailed an increase of rent; no other scheme had such possibilities as the Parish Committee scheme; it had, in nine years, worked remarkable improvements in Knock; the first year it built about 50 out-offices, estimated on an average at £12 each, and this was continued till every landholder had sufficient accommodation; the houses were then improved, until most of them were provided with concrete floors and large windows, 50409.—

FALLON, Rev. JOHN—*continued.*

Though the valuation put on these houses was unfair, and pressed heavily on the poor, 50429-30.—It did not actually deter them from building, and in one village recently twenty slated houses had been built within the year, 50430.—The scheme had the effect of technical training upon the villagers, 50431-2.—They had to build upon sites selected, and carry out plans and specifications submitted under the instruction of the supervisor, and, training once begun to improve, the taste for improvement became almost a passion, one improvement leading the others, 50430, 50436.—This was an opinion formed from witness's own observation, 50436-7.—The Parish Committee at Knock had had domestic classes, which were wonderfully successful, 50444-5.—The Board sent down instructors in cookery, laundry, and domestic economy, 50445-7.—A class was formed at the best house in the village, and a class of forty girls of ages averaging from sixteen to twenty-one, met weekly, hardly one being absent for six weeks; the class changed the aspect of the country in the way of cleanliness and tidiness, 50445.—Which witness considered the best economy of all, 50448.—They had applied for another class, 50445.—Last year the Parish Committee of Knock had planted 20,000 trees, 50409-10.—The Board had paid a third of the cost of trees, ordered and bought by the Parish Committee, through witness, this amounted to £5, 50411.—The peasantry began to plant trees themselves three years previously, and some were growing, 50421.—But many had died, owing to bad planting, and were being replaced, 50422.—Witness would not say that a third had died, 50423.—These trees had been given by the Board, and would in future be valuable shelter belts, 50412.—The Parish Committee now allowed the tenant one-third the cost of the trees, 50415, 50418.—And nothing for his labour, 50420.—This worked successfully, and witness expected to double the number next year, 50419.—The trees planted were chiefly Austrian pine and Scotch fir, 50413.—No trees were given till the supervisor had reported that the land to be planted was properly fenced, 50414.

Supervisors of Agriculture.

Witness thought the plan of supervision adopted with regard to tree-planting could be successfully applied to agriculture; the supervisor would superintend the preparation of the ground, and give information as to seeds, times of planting, manures, etc., and this would much advance agriculture in a few years, 50424, 50428.—The Agricultural Department used formerly to work in this way, with success, and it was better than the system of inspectors, 50428.—The Parish Committee now supplied the parish supervisor, and paid him 10 per cent. of the grant from the Board, 50425-6.—If he were to be employed as an agricultural instructor, a different form and amount of payment would be adopted, 50427.—The same man need not be employed for both purposes, 50428.

CONNELL, Mr. THOMAS.

See pp. 134-5.

Witness's Holding.—Various Rents, etc.

Witness was a farmer, having a holding, 50491.—Since 1865, 50531.—At Bekan, between Knock and Ballyhaunis, on the Dillon Estate, of 35 statute acres, 50491.—He had formerly been tenant under a middleman, Frank O'Grady, who held a farm from Lord Dillon, under a lease, and was a judicial tenant, 50491-3.—O'Grady was a tyrant, 50491.—And a bad agent, an advocate of high rents, 50535.—When a tenant under O'Grady, witness had paid £24 for his holding, 50491, 50495, 50508.—He paid this by devoting nearly all the produce of the holding to rent; people now lived and dressed better, 50532.—The tenants had got more and the landlord less, witness thought this a wise arrangement, 50533.—Witness got a reduction of rent to £15, without going into Court, 50496.—He paid £24 till 1879, and after that £15, 50507-8.—This reduction, nominally voluntary, was wrung out of the middleman, 50510.—It was

CONNELL, Mr. THOMAS—*continued.*

before the Act of 1881 was passed, 50509.—After this, witness went into Court, and had his rent reduced further, to £12, 50494, 50497.—It was at £12 when witness purchased his holding, 50498.—And in consequence of the purchase, witness's annual payment was reduced from £12 to £5 17*s.*, 50491, 50499.—Witness had begun negotiations for purchase under the Ashbourne Act, when his annuity was £7 4*s.*, 50499, 50502.—When the Act of 1903 came into operation, he had to pay only £5 17*s.*, 50499, 50503.—He actually purchased about eight or nine years previously, 50500.—Of the Congested Districts Board, 50502.—Which drained part of the holding, 50502, 50506.—The other improvements were made by witness himself, 50505.—Put differently, witness's 4 per cent. annuity made £7 4*s.*, and the 3¼ per cent. made £5 17*s.*

Congestion in Bekan, Larganboy.

The whole of the parish was very much congested, though almost all the land was bought by the Congested Districts Board, 50511, 50515.—The townland of Larganboy had an average valuation of £1 15*s.* or £1 16*s.*, and contained sixty-four tenants, 50511.—It was near Mannan Lake, which was injurious to the land, 50529, and was on the Taaffe Estate, and about two Irish miles north-west of Ballyhaunis, 50529.—It was a suitable place for the Commissioners to collect evidence, 50528.—There was a grass farm adjacent, 50511.—Formerly in the possession of Knox, from Ballina, and called the Taaffe Estate, 50514.—It was situate between Knock and Ballyhaunis, 50512.—The estate had been refused by the Commissioners on account of the townland of Larganboy, adjacent, which was congested, and because they thought it not sufficient security for the purchase money; but the Commissioners had now bought the whole estate, 50514, 50529.—Though the rents were not fixed, 50529.—Or the land vested in the tenants, 50514.—This land would be suitable for the migration of congested tenants, 50511.—The Taaffe Estate and More O'Farrell's property was also congested, and More O'Farrell's was highly rented, and often flooded, 50528-9.

Migration and Distribution of Grass Lands.

Witness believed that the majority of the Dillon tenants would migrate, if they got good holdings, 50515-6.—Now they were in bad circumstances, 50511.—And since their holdings were small, they were obliged to migrate to England for work every year, 50515.—Witness was not anxious to migrate, 50515.—But would be willing to do so, to improve his circumstances, 50520.—He would not particularly wish to go to Roscommon, until they gave up cattle driving, 50520.—The feeling against migration was disappearing, 50517.—Migration was increasing, 50516.—Witness thought that the people in the neighbourhood of grass lands should be first considered, in their distribution, 50522.—And unless they were provided for, others might come in from a distance, 50523.—He did not think that sons of farmers should get holdings in preference to migrants from a distance, but when the people on the spot were congested, and others imported, he considered unfair, 50524.—The question of what was fair in this matter, was a question of degree, 50526.—It had not been thought fair to import persons to grass lands in the Knock neighbourhood, when the Congested Districts Board left the people in the neighbourhood with very small holdings, and gave the land to persons from a distance, 50521.—The inspectors of the Board generally differed from the local people on these matters, 50526.

Drainage of the Robe.

Witness lived at the source of the Robe river, 50526.—which had this year flooded many acres of tillage land, 50527.—And flooded much of witness's parish, the floods from lower down the river often backing up towards the source, 50526.—It would be well for the Commissioners to see the district, 50528.—The river needed clearing and dredging to let the water get away, 50530.

PRENDERGAST, Mr. LUKE.

See pp. 135-6.

Witness's Holding.

Witness had a holding of eight acres at Woodstock; his father, now dead, had bought a field of two acres one rood from Colonel Browne, seventeen years previously; Colonel Browne (at his death) had not turned witness's stock off the land, 50536.—But had taken witness to Ballinrobe, and "decreed him for the possession of the land," 50537.—But when witness served a notice to put a fair rent on his holding, Colonel Browne deprived him of the two acres, 50536-7.—Witness had no property in this land, only an understanding that his father should buy it, 50537.—But he had reclaimed the land, improving the soil with clay, by his own labour; it was not true, as had been stated before Judge Morphy, that witness had six horned cattle on this field, he had only two sucking calves, 50538.

Witness's Family—Migration, etc.

Witness, since the death of his wife, was unable to work in England, as he had done till six years previously, 50536.—Three of his sons were in America, 50539.—And two others migrated to England, coming back in the winter, 50541-2.—And living, one at Baltor, and one on witness's holding, where he worked with witness, 50542-3.—All the men on Colonel Browne's Estate worked in England for six or nine months in the year, as he had done himself, sleeping in barns and outhouses, 50544.

Colonel Browne's Estate.

Colonel Browne's Estate, though congested, was not scheduled, on account of the proximity of grass lands to congested tenants; the tenants were anxious to buy the grass lands, which were good, while the tenants' holdings were chiefly cut-away bog, and were uneconomic; Colonel Browne was an absentee landlord, and regardless of his tenants' interests, 50544.

WALDRON, Mr. MARK.

See p. 136.

Uneconomic Holdings on the Oranmore Estate.

Witness farmed 29 statute acres at Killean, Ballindine, his valuation was £12, and his rent £14; he was a tenant on the Oranmore Estate, and had about the largest holding on the property, 50545, 50547.—Witness, before the Act of 1881, was paying £26 8*s.*, but at that time the holding was decreased by six acres and the rent raised to £27 8*s.*—Witness spoke for himself and for sixty-four tenants, whom he represented, 50545.—Between 1862 and 1866, before the tenants had fixity of tenure, fifty tenants were evicted, 50545-6.—These fifty held on an average 15 acres of land, 50545.—And together with forty, who were migrated from Carrowlessa to Killean, which was congested, 50545.—Held 2,000 acres of arable land, which was now in the hands of graziers; graziers from other properties held 3,000 acres of the Oranmore property, while the tenants had only 300 or 400 acres, English, 50548.—When the tenants were evicted they were promised the grass of a cow and calf on good pasture at £2 a year, but when they got possession the landlord charged them £4 on one farm, and then moved them from that and charged them £3 on bad mountain land, 50546.—This land was poor and unhealthy, and cattle on it frequently died of blood murrain and other diseases, 50547, 50548.—Witness had seen two families under the same roof at Killean occupying about five English acres of reclaimed bog each, 50546.—The tenants evicted in 1862-66 were most of them living to-day, many in hovels in Ballandine, or on unreclaimed patches of bog, 50548.—Lord Oranmore had not offered his land for sale; and when approached by tenants, he offered them holdings of twelve acres English, at most, 50548.—He now wished to claim as demesne the land from which the tenants had been evicted, 50548.—Some of the holdings of the evicted tenants had been divided and given to those who were migrated, 50546.—Lord Oranmore gave no employment to his tenants, 50548.—Except the rough work, 50552.—The greater number of the labourers he employed were Englishmen and Scotchmen, 50548-52.—And the best paid, and pleasantest work, such as gardening, milling, forestry, and rabbit catching, was done by these imported labourers, 50552-3.—Any labourer whose wages were more than eight shillings a week was an imported man, 50554-5.—Witness had not worked for Lord Oranmore, and had no ill-feeling towards him, 50555.—The tenants were very poor, living from hand to mouth, at the mercy of shopkeepers, and could only live with the assistance of friends and relatives in America; the land was exhausted, owing to continuous cropping, which resulted from the smallness of the holdings, 50555-7.—And produced vegetables often unfit for human consumption, 50555.—Every season was a bad one, for land so treated, 50557.—Witness wished to assure the Commission that tenants could not live on their holdings, and to ask that the Congested Districts Board should have power to distribute grass lands and untenanted lands in such quantities as to make the holdings economic, 50559.

Drainage.

The drainage of the River Robe and its tributaries would greatly benefit witness's parish, where much damage was done by floods sweeping away hay and crops; witness had heard a farmer state that drainage of this river would benefit him by £100, and he was willing to pay a good part of it, 50555.—This farmer held 200 acres, of which twenty was annually flooded; witness would give the name of the farmer, if pressed, 50558.

JORDAN, Mr. DAVID.

See pp. 137-8.

Witness's Purchase under the Ashbourne Act, etc.

Witness was a farmer, holding 8½ acres, 50570.—At Lecarrow, near Ballyhaunis, on the estate of the Rev. T. Wallace, of Booterstown, County Dublin, 50560.—Of witness's holding, only four acres was arable, and there was other land, unfit for grass or hay, owing to the surface having been carried away, and only rock being left, 50568, 50571.—Some was in rundale, 50570-1.—This was in three different places, 50605.—Witness knew where it was, though at the time of the sale of the land to him, in 1900, 50579.—No map was given to him, 50604, 50613.—The land was inspected on behalf of the landlord, and then for the Land Commission, 50606, 50608.—All the facts of the holdings were known to the inspector, 50607.—And to witness, who had a paper stating his position after purchase, 50610-1.—But no description of his farm was given, 50613.—Some of witness's land was held in common with other tenants and divided by agreement, 50571.—The holdings on that estate varied from 2½ to 15 acres, but the greater part was cut-away bog, 50571.—Witness's valuation was £3 12s., 50560.—His rent before purchase was £5 2*s.*, 50578.—He had paid eighteen years' purchase of second term rents, 50567.—His annuity was £2 8*s.* 4*d.*, 50577.—He intended to apply for the decanal reduction on this, to which he would be entitled in a few years, 50580-1.—Witness, and thirty other tenants, had purchased direct from the landlord, 50560, 50604.—They did not understand the purpose of the Congested Districts Board, 50582.—If he had understood this, he would not have purchased except through the Board, 50609.—They now wished to be brought under the Board or the Estates Commissioners, 50564.—Which would enable them to have their holdings enlarged, 50561, 50583.—They had purchased their holdings under the Ashbourne Act of 1896, 50567, 50579, 50603.—Before the sale of the Dillon Estate, 50560.—Now, witness and the other Lecarrow tenants were excluded from any privilege on the Dillon Estate, 50560.—And there were no grass lands on the Wallace Estate, 50560, 50591.—The people contiguous to the Dillon grazing lands had the prior claim on them, 50561.

JORDAN, Mr. DAVID—*continued.*

WILLINGNESS TO MIGRATE.

Witness and other tenants would be willing to migrate, and leave their farms for the enlargement of other uneconomic holdings, 50563, 50566, 50584, 50592, 50601.—Witness would be willing to go to Roscommon, 50594.—If it would improve his condition, 50566.—He did not anticipate an unfriendly reception if he were to emigrate, 50597-8.—Though there might be individual cases, where the grass lands were small, and neighbouring tenants wished to keep them for themselves, 50596, 50598, 50600.—Public opinion was beginning to take broader views on the subject of migration, 50599.—Witness had no business except his present holding, but his sisters helped him, 50576.—He had four sisters in America, 50576, 50593.—He had a cow and two calves, 50572, 50574, 50585.—He could not feed them on his holding, but on hand feeding, with "shop-stuffs" and grass which he bought, 50574, 50573.—When they were two years old he sent them to Roscommon, 50573, 50586.—Sometimes thirty miles distance, 50587.—If there were no grazing lands, witness would have to live on any vegetable he could grow; it would seriously damage his farming, 50588-9.—If he could obtain grazing lands himself, the difficulty would disappear, but this would not be convenient without migration, 50590-1.—The larger and more prosperous farmers should be migrated, 50601.

TURBARY BOG.

Witness was chiefly anxious to obtain help from the Congested Districts Board, or Estates Commissioners, in getting access to turbary bog, without which the land was of little use to tenants, 50564.—The tenants on the Wallace Estate had for forty years cut turf on the Dillon Estate, 50563, 50615.—For fifteen years of this time, they paid five shillings a year for the privilege, 50563, 50615, 50626.—This arrangement was made with the bailiffs on the Dillon Estate, 50616, 50621.—The Wallace tenants could claim no right, 50625.—The agreement was from year to year, 50622.—Though the continuance of the arrangement for forty years suggested a right, 50526.—And the discontinuance was a hardship, 50634.—The turbary was now divided among tenant purchasers on the Dillon Estate, 50564, 50617.—On representation being made by the Wallace tenants to the Board, they replied that it was purchased exclusively for the tenants on the Dillon Estate, and outsiders would not be allowed to cut turbary, 50618, 51619.—There was no turf on the Wallace Estate, and since they had been excluded from the Dillon Estate, they had gone to many places for turf, 50564, 50633.—In some cases an inconvenient distance, and the turf was often of an inferior quality, 50564, 50623.—They were not even allowed to buy of the Dillon tenants, 50563.—Though these had more than they required, 50536.—And did, in fact, supply the Wallace tenants at times, 50632-3.—If the turbary bog was insufficient for the Dillon tenants, and unlikely to last more than fifty years, 50627-8.—There was other bog land available, 50628.—Witness did not bring any charge against the Congested Districts Board, but suggested that the Wallace tenants had been deprived of a benefit they had enjoyed for many years, and asked for some arrangement, by legislation or otherwise, by which they could obtain turbary, on sufficient payment, 50630.

CLARKE, Mr. PATRICK.

See p. 139.

DISSATISFACTION OF WITNESS WITH TERMS OF PURCHASE FROM THE BOARD.

Witness was a tenant under the Congested Districts Board at Ballyglass, his holding was twenty-four acres, of which the valuation was £11 15*s.*, 50637.—He had no land previously, 50639, 50648, 50658.—Land was enclosed for him, 50659.—A grant of £10 was given to him for the improvement of his house, 50654, 50660.—It was the same he had previously occupied, 50654.—He had had only one room; witness

CLARKE, Mr. PATRICK—*continued.*

had built a second, 50660.—The Board had made one ditch on his land, 50657.—Witness had paid £50 for the land, 50638.—He did not know whether that was cheap, 50640.—It was half bog-land, 50638.—He considered £50 too large a fine, 50637.—As a neighbour had obtained thirty-four acres without paying any fine, 50642.—Witness did not want to get a fine put on the other man, 50646.—But to get his own fine back, 50645.—He had received £20 back in April, and had his annuity increased to meet it, 50647, 50649.—This was not given back for the purpose of stocking the land, 50650.—He had some stock before taking the land, 50653.—He considered that he was as well off as now before he bought the land, 50661.—He had a better living previously, 50644.—The Board had taken away his means of living, 50644.—He was formerly a herd, 50637.—He had entered into the arrangement of his own free will, 50641.—He did not wish now to give up the land, 50662.

CONNOR, Mr. THOMAS.

See p. 139.

REQUEST OF WITNESS FOR REFUNDING OF FINE.

Witness was an evicted tenant, now restored to his holding, on the estate of Mr. Isidore Burke, 50663, 50678.—At Ballinamalla, 50663, 50665.—He was evicted, together with forty-five other tenants, in 1881, 50663.—And his father-in-law afterwards took up the holding, and gave it to witness's wife, 50663, 50677.—Who made it over to witness, 50678.—Witness was only out of the holding from November till May, 50681.—The holding from which witness was evicted was valued at £79, 50665, 50679, 50683.—By the Land Commission, 50680.—Its area was thirteen acres, the rent was £7 14*s.*, 50663.—Witness had this holding enlarged to thirty-six acres, 50668.—Which he held under the Estates Commissioners, 50676.—And paid £61 for the change, £31 down, and £30 with the rent, 50666.—£79 was the tenant's interest in the farm he gave up, and £61 in the farm he took up, 50667-8.—Witness now paid £16 10*s.* rent, and his valuation was too high, 50670.—Rates were high in Claremorris Union, and witness had to go five miles for turbary; in consideration of these disadvantages, he asked for the remission of the £31 fine, to enable him to start the world afresh, 50668, 50688.—He would be willing to have his annuity increased accordingly, 50675.—Witness had been in possession more than three years, 50673.—He was tilling three or four acres, 50671.—A less area than in the old holding, 50674.—It was very hard for witness to live at all, and he got no crop the first year of his new holding, 50674.—The land was some of it good, and some bad, 50671.—Witness was paying rent to the Land Commission, and hoped they might refund the money, 50669.

M'LOUGHLIN, Mr. MARTIN.

See pp. 140-1.

UNECONOMIC HOLDINGS UNDER THE BOARD.

Witness's holding was situate at Knock, Ballyhaunis, 50688.—Consisted of twenty-seven statute acres, at £8 valuation, 50685-6.—And with a rent of £4 8*s.* 10*d.*, 50687.—Tenants in this district, Knock South Electoral Division, 50697.—Were all purchasing owners under the Board, this was under different Acts, 50690.—Most of them paying annuities to the Land Commission, 50699.—The property was known as the Dillon Estate, 50700-1.—And passed to the Board about nine years previously, 50700.—The Board had enlarged a considerable number of holdings in the district, 50706.—And the people were contented and happy, 50690, 50706.—But they were still obliged to go as migratory labourers to England and to emigrate to America, and before the holdings could be made economic, fifty to eighty families must be migrated, and the remaining holdings enlarged, 50690, 50694.—There were about 600 families in the district, 50693.—And, after eighty had been migrated, their holdings should be divided among the remainder, 50694.

M'LOUGHLIN, Mr. MARTIN—*continued.*

WILLINGNESS TO MIGRATE UNDER FAVOURABLE CONDITIONS.

These uneconomic holders, and others in Knock North, and parts of Caraun and Kilkelly, 50698.—And paying annuities of 30*s.* to £2, and with rents of 30*s.* to £4, 50696.—Would be willing to migrate, if the rents of the new holdings would be less than what they paid at present, 50698.—But they considered the rents of most of the new holdings created by the Board to be too high, 50698, 50710, 50719-20.—Witness had heard persons who were migrated to new holdings complain that rents were too high, 50735.—But had no personal knowledge of it, 50736.—He was not a migrant, but remained on his old holding, 50733.—Which had not been enlarged, 50734.—Witness's former rent was £9 4*s.* 8*d.*, 50702.—Being twice his present annuity, 50703.—Tenants of the Board considered the valuations were also too high; there was £2 to £3 on each house, besides the land valuation, 50698.—Witness had not heard whether the migrants were prospering, 50735.—There was more willingness among the holders on the Dillon Estate to migrate than before they came under the Board, 50709.—They were not afraid of bad treatment at the hands of their new neighbours, if they migrated, 50710.—But only of rents being too high, 50709-10.—It would be an advantage to migrants to have an instructor in agriculture, 50741.

OPERATIONS OF THE BOARD ON THE DILLON ESTATE.

The tenants on the Dillon Estate were considerably better off than formerly, 50708, 50737.—They were better able to pay cash, and keep out of debt, 50738.—So far as witness knew they were now not much in debt, 50738.—This was a great improvement, 50739.—They appreciated the work of the Board, 50711, 50723.—The Board had enlarged their holdings in divisions, giving each tenant three to six acres more than formerly, 50707.—The Board had for the last eight years built about forty out-offices annually, 50704-6.—And had improved dwellings and surroundings, and built retaining walls, and made sanitary arrangements; in the houses they had constructed ceilings, and put in concrete floors and large windows; they had also carried out large drainage schemes, and had deepened and widened rivers, and made small drains, and constructed roads, 50704, 50706.—The enlargement of holdings had pleased the people, but still the rents were excessive, 50712, 50720.—If the charges for building were excluded the prices and annuities on the Dillon Estate would not be excessive, 50716.—If a slated house and new outbuildings were erected on witness's holding the rent would be nearly doubled, 50715.—Witness did not say the Board was paying excessive prices for property, 50714, 50724.—The prices were high, because landlords were unwilling to sell, 50725.—Though the charges of rates and rents fell heavily upon existing holdings, 50727.—And there might have been less could the land have been bought more cheaply, 50728.—Still the Board had not given more for the land than was necessary, 50729.—If they had had compulsory powers the land could have been bought more cheaply, 50730.—They had done as well as they could, 50731-2.—They bought the Dillon Estate at comparatively moderate price, 50742.—The wages given by the Board helped the Dillon tenants to pay off their debts to a certain extent, 50745.

AGRICULTURAL BANKS.

Witness believed that agricultural banks existed on some parts of the Dillon Estate, though not in his parish, 50743.

CRAWFORD, Mr. ROBERT.

See pp. 141-4.

WITNESS'S EXPERIENCE.

Witness was agent for Colonel Knox, of Ballinrobe, and for Mr. Sheffield, whose estate adjoined the town of Claremorris, and also for other small estates in the north of Mayo, 50747, 50773.—And as an engineer, 50746-7.—And also as a tenant farmer, 50746.—Was well acquainted with every property in the county, 50747.—He appeared on his own behalf, and also on behalf of the landlords generally, 50748.—Though he had not been nominated by the landlords, 50749.—They might consider his views too drastic, 50750.—Witness was also superintendent of three drainage districts under trustees in Kilmaine, in Lough Mask, and River Robe, and in Castlebar, 50750.

CRAWFORD, Mr. ROBERT—*continued.*

ARTERIAL DRAINAGE AND STRIPING OF HOLDINGS.

The first necessity of the West of Ireland was drainage, especially arterial drainage, 50750, 50764.—It was important to drain and stripe holdings, and not to embark too rashly on the distribution of grass lands which would be wanted later on; if 80 per cent. of the holdings were properly drained and striped they would materially increase the prosperity of the tenants at a third or a tenth of the cost of schemes of migration, 50750.—The engineers of the Estates Commissioners had shown great lack of judgment in proceeding to the distribution of grass lands, and the Claremorris Estate, where tenants had stripes given them without fences or water, and three miles from their dwellings, 50752, 50754.—Small tenants got none of this land, which all went to larger men, who, in many cases, could not keep it in their own hands, but sublet it, 50755-6.—An instance in the demesne of Newbrook, where the owner, whose name witness did not know, was letting to a Mr. Murphy, a cattle dealer, one or two stripes at a less rent than he was paying to the Commissioners, 50756-7.—Witness thought the Board would have managed this better, 50758.—They would have taken a couple of very large tenants off a very poor estate, and would have planted them on the Claremorris Estate; by this plan they would have had only two houses to build, which was cheaper than building houses for many small tenants; the holdings of two large tenants distributed among those remaining would transform the small holdings, 50761.—Poor tenants if migrated had no spirit or means to work land at a distance; but if they had two acres added to existing holdings without disturbing their houses or fences they would, with this and the drainage, be much benefited, 50761, 50820-22.—Witness had no personal experience of migration, except on the Castledillon Estate, and what was done in the Orkneys and Hebrides, but he perferred to confine his evidence to Mayo, of which he had a thorough knowledge, 50762, 50785.—Witness did not consider that by removing large tenants he would be creating congestion; the land left by the large tenants ought to suffice for improving small holdings without including in their rent-charge any expenditure, 50764.—Witness had himself only enlarged holdings by inducing the landlord to purchase the interest of any tenant wishing to leave, and using this to persuade the tenants to have their land striped, 50763.—He thought there was a tendency to headlong distributions of grass lands as on the Claremorris Estate, 50750-1.—There was not enough land anywhere in Mayo to make economic holdings for everyone, 50764-5.—Witness based this opinion on evidence given to this Commission, 50768-9.—Even if tenants of the coast were excluded from the distribution of grass lands, and depended for relief on the development of fisheries, there would not be enough to give tenants economic holdings, 50770-1.

THE SHEFFIELD ESTATE.

When witness opened negotiations, three years previously, with the tenants of the Sheffield Estate, he had promised to give each of them grass land which would make up their holdings to twenty acres each, 50771.—This meant statute acres, and the tenants were at first pleased, but afterwards the large tenants asked for the same amount of additional land as the small tenants; this, witness would not allow, but promised each of them as much land as would make their holdings two and a half times larger, on condition that they would agree as to the prices of their judicial tenancies, and then witness would sell to the Board or Estates Commissioners all the land in question, making it as far as possible a condition that no migrants should be introduced from a distance, 50772.—The tenants would make no offer, 50772, 50775.—Father M'Hugh was present at the negotiation, 50772.—Witness asked the tenants

CRAWFORD, Mr. ROBERT—*continued.*

23½ years' purchase, 50772, 50776.—It was not true that he or the landlord asked 18 years' purchase, 50772, 50781, 50784.—Mr. Killeen had made this statement, 50773, 50780.—Which witness denied, 50777. —Mr. Killeen had also said that in 1888 a price had been offered on second term rents, which was absurd, as there were no second term rents till 1896, 50773, 50779.—Witness was not agent for Mr. Sheffield at that time, 50781.—But was agent for fourteen years, 50773.—He thought Mr. Killeen had been misled, 50783.—Though on the spot at the time, Mr. Killeen was not then to the fore, 50782.

GRANTS IN AID OF PURCHASE OF GRASS LANDS.

Witness was of opinion that the work of purchasing, draining, and distributing grass lands could not be carried on without a further grant from Government; this should amount at any rate to one-third of the cost of grass lands purchased, 50784, 50791.—In purchasing grass lands, the State obtained a property which had both a tenant's and a landlord's interest, 50791.—And it was not right that the tenant taking over this grass land should pay this tenant-right charge as well as the fair marketable value of the holding, which would saddle him with an impossible tax, 50784, 50793, 50815-6.—And the difference between what it was just for the tenant to pay, and the landlord to receive, should be paid by the State, 50793.—It would amount, perhaps, to a quarter of a million if the 12 per cent. which was talked of were given for the purpose, but four or five millions was required, 50784.—The State should not pay less than the market value, 50794.—And the professional men, artisans and labourers, who made up the State, should pay this charge, because it was an Imperial matter, 50795.—If the charge on the tenants were too high they would not be able to pay it, 50796.—And the landlord, if he got his share of this sum, would only get the market value of the land, 50797.—If the charges for rates, taxes, herding, maintenance and agency were deducted from the profits of a grass farm it would be worth about the same sum as the tenant's rent plus the tenant's interest, 50798.—When a tenant was put on to the land he could immediately sell his interest, 50818.—But the ordinary tenant had inherited his holding, and it made no difference to him whether his tenant-right would sell for 20 or 40 years' purchase, 50784.—And the migrated tenant had, as a rule, given up other land to acquire his new holding, 50819, 50823.—Otherwise he would get the tenant-right of the new holding for nothing, 50824.—Witness did not approve giving land to anyone except present occupiers, since there was not enough land to go round, 50819. —If there were a very great difference between the values of the old and new holdings he might fairly pay something, though not much, 50825.—Otherwise, if he paid nothing, a migrant would be much better off than other tenant farmers; but he required more means and enterprise than other tenants, 50826.—His annuity should, therefore, be small enough to give him hope for the future, or migration would be discouraged, 50827.—A migrant should not be burdened with any charge which he could not expect to pay with reasonable industry, 50828.—The Board built so many houses that the cost of building and drainage could not be borne by the incoming tenant, 50788-9.

CONGESTED DISTRICTS BOARD AND ESTATES COMMISSIONERS.

Witness had no hesitation in stating that, comparing the operations of the Estates Commissioners on the Claremorris Estate, and that of the Congested Districts Board on the Bingham, or other estates, that the action of the Board was wiser and better, both in the interests of the people and of the State, 50787-9.—The Board was the proper authority to deal with distribution of land in Mayo, 50753, 50785-9.

INCREASED PRICES OF LAND UNDER SECOND TERM RENTS.

Witness had sold property at 23 to 26½ years' purchase, 50800—and at £22 on the valuation, 50802, 50804—under the Ashbourne Act, 50801.—The rent in this case being 10 per cent. over the valuation; witness accounted for the rise in price, first, by the

CRAWFORD, Mr. ROBERT—*continued.*

fact that the annuity was less, 50807, 50809.—The second term rents, and in some places the first term rents had been fixed since the lower price obtained, 50805.—The property was not diminished in value, 50808.—And, secondly, by the consideration that money could formerly be invested more profitably than at present, 50809.—Not more than 3½ per cent. could be obtained now, 50810.—Most of the estates were now settled, and the landlord could not touch the money, but must have it invested through the public trustees, where it would probably bring in 3½ per cent., 50811.—Witness had read Mr. Waldron's evidence, and also that of the Public Trustee, who gave the rate of interest as £3 8*s.* 6*d.*; and a judge of the Land Court had said he had £30,000 of land on which he could not get more than 3 per cent.; a third reason for the larger price asked by landlords was that they had to wait for their money for 3½ years, 50812.—The landlord was only getting the annuity meanwhile, 50813.—And that did not amount to anything like his previous income, and the charges must be paid before he touched a penny, 50814.—If a landlord charged 30 years' purchase this would be a third too much, 50817.

GLYNN, Mr. JAMES.

See pp. 144-7.

SOME PARTICULARS OF WITNESS'S HOLDING.

Witness had a farm of sixteen statute acres, 50831. —At Esker Valley, Claremorris, 50930.—At a valuation of £6 15*s.*, 50832.—And a present rent of £8, 50834, 50865.—Witness had not yet purchased, 50834. —His rent was by agreement between landlord and tenant, 50836-7.—The rent had been fixed in Court in 1883, 50837, 50840.—And in 1884, the landlord raised the rent, 50838, 50841, 50844.—This increase of rent was put on the first term men, 50837.—And were paid for fifteen years, 50837.—When the landlord took off the rise, 50837, 50839, 50864.—And tenants were now paying first term rents, and had done so for eight years, 50837, 50839, 50866.—The rise was from 10*s.* to 30*s.*, and was put on eight tenants, 50837. —There was no alteration as to their holdings, and no alteration of grazing arrangements, 50842-4.—The tenants paid this because they owed arrears of rent, which they could not pay off, 50845.—There was a year's arrear when they went into Court, 50847.—And two years by 1884, 50848-9.—And the landlord pressing for arrears, brought about the rise in rent, 50850.—The landlord did not take his tenants into Court till he raised the rent, 50852.—It was not the Civil Bill Court which had determined that the tenants should pay the increased rent, and arrears by instalments, 50852.—The arrears were not added to the rent, 50852, 50854.—The landlord said he had appealed, and the High Court had pronounced the land too cheap, and that if he did not obtain an increased rent, the tenants would be put to great cost, 50856.—It was not paying off arrears by instalments, because the arrears were to be paid immediately after the increase in rent, 50857.—Witness was not evicted for arrears, 50859.—Nor made a future tenant, 50860. —No process was served on witness for until about a year after this time, 50861-2.—And this was not acted upon, since the tenant paid, 50863.—This was on the Begley Estate, 50858.

DISTURBANCES ON THE BEGLEY ESTATE—ACTION OF THE BOARD.

Witness wished to inform the Commissioners as to the action of the Board with regard to its grass lands round the Begley Estate, 50867.—The holdings on this estate were of small valuation, and the tenants were not able to get enlargements, 50868.—The Board had bought grass lands all round this, the Roche lands, which had been distributed among the tenants of a neighbouring property, 50868, 50882-4.—They also bought the Clonford Estate; the Blacker Estate, and the Bourke Estate, which the Board had purchased two years ago, 50936-7.—Also the Castlegar property, most of which was grass, and was adjacent to the Begley property, 50886.—The tenants on the Begley property

GLYNN, Mr. JAMES—*continued.*

were in the same position, from the point of view of congestion, as the Roche tenants, 50885.—They saw the advantage which would accrue to them from coming under the Board while it still had grass lands to distribute, 50887, 50937.—That they would get enlargements and improvements, represented this to their landlord, saying they would be willing to pay a good price for the opportunity, 50737.—And asked him to sell to the Board, 50871, 50930.—They had approached the landlord repeatedly during the last five years, 50871, 50939.—And within the last six or nine months he had agreed to negotiate with the Board, 50890, 50893, 50941-2.—And had, in fact, communicated with the Board, 50931.—Witness had been informed of this by the Board, 50875-3.—But his offer to sell was contingent on his getting a price satisfactory to himself, 50873, 50890.—The tenants were willing to leave the question of price to the Board, 50870, 50919, 50925.—Subject to the price being such that the future tenants would be able to meet the consequent annuity, 50926-7.—But the price the landlord asked was too high, 50877.—Witness had heard so, two months previously, 50878.—From a member of the Board, 50877.—And while negotiations were still proceeding, 50933-4.—The tenants had a promise from Mr. Doran, that the Castlegar farm should not be broken up until an arrangement had been arrived at with Mr. Begley, 50976.—The time was limited to six months, 50976, 50981.—This was kept more than six months, 50982-3.—But before six months had expired, tenant purchasers from a distance came to see the place, 50983, 50913, 50958.—And an official of the Board went on to the property in order to have it divided, 50894, 50909.—And the tenants, feeling that faith had been broken, hunted the workmen and gangers, and the purchasing tenants, who were inspecting the property, off the land, 50979, 50894-5, 50896, 50913.—They put some of them into the river, 50913.—And there were no migrants in the neighbourhood, except one on an adjoining estate, 50913.—The Castlegar farm was the last grass farm in the neighbourhood which remained undistributed, 50928.—And if this were given over to migrants, the Begley men would lose their last chance of enlarged holdings, 50881, 50887-8, 50891-2.—And besides the Begley tenants had been accustomed to have grazing for one cow on the Castlegar farms, while it was unoccupied, 50903-4.—Which was a great assistance to them, 50903, 50905.—And the Board at present allowed them to have it, 50907-8.—But if the land were given to migrants, these tenants would lose their grazing, and this would be a hardship, 50902, 50910-1.—There was a feeling of soreness about the introduction of migrants, 50902.—For the Begley men had expected to get the first enlargements, 50942-6.—And if they did not get the Castlegar land, they must go to a distance to obtain enlarged holdings, 50953-7, 50963.—The Board only proposed to introduce migrants, because it had not been able to acquire the Begley property, 50947-9, 50968.—It was anxious to provide for the migrants from a distance, 50967.—But when it heard of the disturbance with regard to the migrants, it informed the tenants that it would have no more to do with the property on account of this incident, 50897, 50961.—The disturbance was difficult to allay, 50901.—Witness did not know whether the Board, though not responsible to the Castle, was responsive to it, 50898, 50900.

Effect of Disturbances on Selling Price of the Estate.

Witness was still anxious that the Congested Districts Board should buy the Begley Estate, 50922.—And was putting pressure on his side to buy, at a big price, 50924.—Which would be transferred to the tenant, 50923.—And he still hoped the Board would buy the property, and provide the enlargements, 50965.—He regretted the trouble on the property, 50971.—But recognised that if there had been no trouble, the landlord might not have consented to negotiations, 50971.—And might be as reluctant to sell as he was two years previously, 50972-3, 50986.—And the landlord would be able to make a better bargain with the Board, by pointing out the tenants were determined to have grass land at any price,

GLYNN, Mr. JAMES—*continued.*

50964.—The landlord had agreed to sell before trouble arose with the migrants, but the tenants did not care to buy, if they could get no grass land, or other improvements, 50989.—It was difficult for the Board to negotiate with owners while disturbances continued, 50963.

HENNELLY, Mr. MAURICE.

See pp. 147-8.

Witness's Holding.

Witness was a farmer with a holding at Scardane, Seafin, of eighteen statute acres, with a valuation of £8 10*s.*, 50990-3.—And a rent of nearly £9, 50994, 51031.—This was a second term rent; the tenants having gone to Court on the first term, and agreed with the agent for three shillings reduction on the second term, 51032.

Negotiations for Sale on Major Vesey's Estate.

The tenants on Major Vesey's Estate had asked the landlord to sell, on condition that the sale was made through the Commissioners, 50997, 50998, 51000.—The last time was in November, 1906, 51001.—He replied that he did not see his way to sell, 51002.—That he would sell if the bargain were made direct between himself and the tenants, 50999, 51005-6.—The reason he gave came to this, that he would keep the grass land, and sell the remainder, 51016.—But the tenants were determined not to buy except through the Board or Commissioners, and witness had told the landlord this, 51002.—Also they would not buy unless they could get the grass land, 51003, 51016.—They would otherwise go to Court every fifteen years, 51002.—The landlord, when approached by the Board and the Commissioners, had given them the same answer, that he would deal directly with his tenants, 51004-5.—The estate had not been sold to either of those bodies, 51003.—Witness was anxious that the estate should be acquired by the Estates Commissioners, and divided amongst the tenants, 51007.—By compulsory powers, if necessary, 51008.—The landlord asked twenty-five years' purchase, 51012.—The tenants offered him twenty years' purchase, 51012.—Witness would have given him twenty-one, 51014.—The landlord had said he would not sell except at his own terms, 51002.—And the witness, on behalf of the tenants, had offered to meet him half way, 51002.—Witness believed there was no solution of the difficulty but by compulsory purchase, 51014.—He wanted the landlord compelled to sell at a reasonable price, 51009.

Grass Lands once under Tillage.

The grass lands on the Vesey Estate had been at one time under tillage, 51018.—It was arable land which was taken away from tenants, 51019, 51023.—Soon after the Famine, 51022.—Forty years or more ago, 50997.—It was handed over to graziers, 50996-7.—Some was let in Galway, and sub-let to a shopkeeper in Claremorris, 50997.—The land had been taken away, and the tenants evicted, because some of them failed to pay, 50997, 51021.—Only a few of them paid, 50997.—The tenants on reclaimed land were left, 50995, 51019.—The grass land taken away from tenants amounted to 150 acres, 50995.—It was on one side of the road, while the other side was cut away bog and reclaimed land, on which the tenants and houses mostly remained; the grazing land had been laid down to grass for sixty years, 51017.—Witness was a hard-working man, 51024.—And a good farmer, recommended by the Agricultural Department, and if he got a few acres of arable land back, his position would be much improved, 51025.—He and his neighbours would be benefited by grants of grass land, while remaining in their present houses, but would prefer to have fifty acres a head in Roscommon, 51026.—Some of the reclaimed land in his own possession was nearly as good as the grass land, 51027.—Ten shillings an acre was a fair value for the grass land, 51028-9.—Witness

HENNELLY, Mr. MAURICE—*continued.*

would be willing to pay an annuity representing a value of ten shillings an acre, for the grass land, preferring to be under the Board, rather than the landlord, 51030.

DAVIS, Mr. ANTHONY.

See pp. 149-51.

Witness's Holding.

Witness had a farm of ninety acres, 51034, 51046.—With a rent of £34 17*s.*, 51036.—And a valuation of £28 5*s.*, 51035.—At Rathduff, Ballina, in the Carronmore district, within five miles of Ballina, 51037, 51090.—Part of it on Mr. Jackson's Estate, and part on H. Perry-Knox's estate, 51038.—This farm had always been in one block, though in the possession of two landlords, and the block was once larger, as the farm had been divided between two sons, 51065.—It had been in witness's family for more than 200 years, 51047.—For more than 150 years, 51064.—Witness also kept a shop, 51044.—But had no spirit licence, 51045.—Of his ninety acres, twenty Irish acres was tillage, 51048-9.—Witness had been a grazier, but considered that mixed farming paid him better, 51053, 51056.—He laid down his tillage every sixth year to artificial grass, 51073-4, 50187.—He was not exceptional in his district in this practice, 51089, 51091.—The neighbouring landlords were intelligent and industrious, but had not enough land, 51088.—Witness did better with his cattle for having twenty acres of tillage, 51081, 51097.—And considered that if the grass lands were utilised for tillage the country would bear a greater number of cattle than at present, 51098.

Deterioration of Grass Lands.

Witness did not consider that the majority of grass land was deteriorating, 51069, 51071.—Though certain grazing land would deteriorate unless properly worked on mixed farming, 51057, 51070.—He would not say that grazing land in the next ten years would be as good as in the last ten years, 51059.—Good grazing still maintained its price, though grazing that had deteriorated was cheaper to hire, 51068.—Even good grazing should be broken up after a certain time, and witness was anxious to break up some of his best grass land; moreover broken up grass land was the best for growing wheat, a crop that should be encouraged, since the potato crop continually failed; wheat required a natural body in its soil, as well as manuring and subsoil, 51072.—If the price of cattle remained the same, the deterioration in grass land would affect its rent, 51059, 51061.—And it would not be a safe investment for the State, if bought on the basis of ten last years' profits, 51062.

Price of Grass Lands.

The price given for grass lands should not be based on the last ten years' profits, 51062.—Nor on the rents paid by tenants evicted to form grazing ranches, 51062-3.—Some landlords had increased their profits by evicting tenants, and driving them without compensation, as to patches of bog, 51063, 51082.—Though the tenants were not in arrears, 51083.—Then pulling down their houses, to bring down his taxation, 51083.—This gave the land an inflated value, which the State should not recognise when it paid him compensation, 51063.—Witness also knew cases where the rents had been raised by landlords from £3 to £6 10*s.*, and had now been reduced to £3 10*s.* by the Land Commission, this also was an inflated value, which should not be recognised, 51062.—Landlords could not claim to be paid on the tenant interest of his grass lands though they had enjoyed it for many years, 51084-6.—But if a landlord could show he had improved his land, or that his predecessor had done so, he should not be dispossessed without compensation, 51094, 51096.—There were no landlords of this kind in witness's district, 51095.—But where improvements were entirely due to tenants, this should be considered in fixing the price, 51085, 51095.—There were two large grazing tracts close to a congested district, one at Lisdaragh,

DAVIS, Mr. ANTHONY—*continued.*

197 acres, and at Crannagh, 181 acres; these had deteriorated and were now lying fallow; the landlord, to inflate its value, had divided it into bogus holdings, on which he put rents of 24*s.* to 28*s.* an acre, 51039, 51040.—This was done last year, 51040.—But had not been carried out as the land on large adjoining estates was rented at 12*s.* to 14*s.* an acre, and was in better condition, so that ten years' purchase on the bogus tenancy would be equal to twenty-five or twenty-four years' purchase; besides which, the house and offices built by the tenant might be valued at £200, and should be deducted from the selling price, 51041.

Congestion and Available Grass Land.

Witness represented thirty-six townlands, on which there were 151 holdings under £4 valuation, 198 under £10 (the majority of which were under £7 10*s.*), and 52 over £10; of which 43 were under £17, and only 9 over £20, 51038.—In one townland the area was 135 acres 1 rood 30 perches, the bad land (bog or marsh) was 35 acres; the valuation was £132 2*s.*; the population was 72, and in the last fourteen years twenty-eight persons had emigrated; the people were very industrious, but very poor, owing to the smallness of their holdings; during the last year money had been sent to this townland from America to the amount of £111; from England £92, while only £10 had been earned at home; the money from abroad alone had enabled the people to live, 51039.—There were three large grazing farms in the neighbourhood, of 336 acres, and a small untenanted farm of 18 acres, and a second of 40 acres, 51038.—Witness proposed that these should be purchased by the Board or Commissioners, and distributed, 51039.—This would relieve congestion and abate emigration, 51038-9.—Tenants had been driven off holdings on to bog land, and had had their rent raised when they made improvements, 51062.

Cattle.

Witness kept cattle, of which he stall-fed seventeen or eighteen each year, 51075-6, 51080.—He bought half-feds or quarter-feds, and disposed of his first cattle, 51076.—He bought no cake, but fed them on grain grown on his own farm, 51077.—This he considered more profitable than grazing pure and simple, 51078.—But the small tenants, owing to want of space, were obliged to sell their cattle at four months' old; grazing generally cost them 7*s.* an acre, though this year it could be obtained for 4*s.* or 5*s.*; witness sold his cattle at two or two and a half years' old, 51079.—Selling them in Dublin if not satisfied with local prices, 51080.

Labour.

Witness employed ten labourers constantly, and sometimes fifty at a time on a harvest day, 51050-1.

MULKEEN, Mr. MARTIN.

See p. 151.

Nature of Holdings in Witness's District.

Witness held 14 acres 3 roods at Greenwood, Bekan, near Ballyhaunis, his valuation was £7 10*s.*, and his annuity £5 17*s.* 6*d.*, 51099.—Witness in 1904 gave up his old holding to the Congested Districts Board, and migrated to a new holding on the same property; the Board were to build a house for witness for which he was to pay £50, and he was to have the same quantity and quality of land as before; this arrangement satisfied witness, but he now found that four Irish acres of land were flooded from January to June, so that it could not be used for grazing, 51100.—The Board had promised that the drainage should be efficient, 51103, 51111.—Through their engineer, 51112.—The Board had spent £70 in making a bridge and two gullets, 51101-2, 51112.—This £70 was spent for the benefit of holders in the valley, 51113.—And was for the purpose of drainage into the lake, 51114.—Witness's holding was raised by £6 4*s.*, in valuation, and the house was raised 10*s.*, 51102.—The drainage work of the Board was

MULKEEN, Mr. MARTIN—*continued.*

not completed, it was stopped as soon as the tenants signed and the gangers were removed, 51106.—Witness had written to the Board, and was told that his case was under consideration, 51107.—This was in 1904, 51108.—Witness thought the Board should keep its promise and proceed with the drainage, 51110.

BROGAN, Mr. MICHAEL.

See p. 151.

Claim to an Enlargement from the Commissioners.

Witness had a holding of 18 statute acres, with a valuation of £10, and a rent of £8, on the Claremorris Estate, at Weathersfort, Ballyglass; two and a half years previously he had been promised an enlargement of his holding, 51116, 51119.—But after having this for six months the Estates Commissioners made witness give this up to his brother, 51126, 51117, 51116, 51118, 51120, 51125.—Witness now had his old holding, 51118.—And his brother continued to live with him, 51122, 51127.—The brother would get a house built on the new farm, 51127.—Witness and his brother were on good terms, 51128.—Witness had a right to an enlargement, 51121, 51129.—His brother, who had no land before, now had the new farm, 51132, 51131.—And had no wish for an enlargement, 51130.—The Estates Commissioners had not yet distributed all the land, 51122.—Witness supposed this would take time, 51121.—Witness had for some time been a tenant on the estate, 51135.—Some tenants' sons had been given land on this estate, 51134.

BRENNAN, Mr. MICHAEL, Junior.

See pp. 151-2.

Claim to a Holding from the Commissioners.

Witness was living with his brother at Weathersfort, Ballyglass, and had no land, 51136-8.—His father, who died about twenty years previously, had a holding, and was bailiff on the estate, 51142, 51143.—Witness wished for a holding, 51138.—Having no land, 51137.—And his brother, who had a holding of which the valuation was £16 and the rent £10, was entitled to an increase, but had said he would waive his claim on consideration of witness getting a holding, 51140, 51137-8.—The Estates Commissioners had promised witness a holding, 51137, 51139.—But he had not received it, 51137-9.—Nor had his brother received an increase, 51137.—Several farmers' sons had holdings on the Clanmorris Estate, 51141.

BRENNAN, Mr. MICHAEL, Senior.

See p. 152.

Claim to an Abatement from the Estates Commissioners.

Witness had a holding of between six and seven acres at Neathersfort, Ballyhaunis, with a valuation of £7 5*s.*, and rent £5 12*s.*, 51145.—Witness went into Court when the Claremorris Estate was sold, and was promised an enlargement of ten acres, 51146.—He had not yet had his vesting order, though this was two years ago, 51150.—Witness had not his enlargement yet, though he was brought into Court, 51150.—And raised to £6 10*s.*, 51146, 51150.—Witness had asked Mr. Stewart and Mr. Hogan, who were in Balla, for a reduction or abatement, 51146-7.—An account of a passage (needed by an adjoining tenant) to water, which passed through witness's enlargement, 51146-7.—This passage was given in witness's absence, 51146-7.—And took a strip of the enlargement, seven feet wide, and 100 yards long, 51147, 51157.—The reduction asked on account of this was four or five shillings, 51148.—The reduction was refused, 51146-7, 51153-5.—Witness was entitled to his enlargement, and there was plenty of grass land available for him to have it elsewhere, 51152.

HENRY, Mr. MARK C.

See pp. 153-6.

Fall in Rent on Witness's Land.

Witness had twenty-five statute acres, with a valuation of £10 on land; the rent had been about the same, and had dropped to an annuity of about £4, 51158-60.

Swinford Union; Exceptionally Poor Condition of People; Congestion of Evicted Tenants on Inferior Lands.

Swinford had an unique position among the Poor Law Unions constituting the "congested districts"; the valuation per head was the lowest in Ireland, except in three Unions on the coast, where, however, the occupiers had advantages, *e.g.*, fishing, not possessed by inland Unions; Swinford Union did not contain as large tracts of prime land as did other Mayo Unions, because when auxiliary workhouses had been established in the county, the original boundaries of the Union had been altered, and drawn, for the most part, round a vast area of comparatively poor soil; this was crowded with families who had been evicted from the good lands, now transferred to the newly-constituted unions, 51161.

Population, Valuation, and Acreage; Majority of Holdings Uneconomic.

Swinford Union had a population of 44,162; total valuation, £41,783, or 18*s.* 11*d.* per head; the superficial area was 151,560 acres, but the actual area under crops (including meadow and clover) and grass, together with the area of uncropped arable land, was 112,588 acres; the rest being made up of land under water, road, bog, etc.; there were 2,700 holdings; 4,768 were valued under £4; 2,327 from £4 to £8; 395 from £8 to £15; 77 from £15 to £20; 133, chiefly grazing farms and lands grazed by landlords, over £20; out of 7,700 families, there were 7,095, say, 35,000 people, whose holdings could not support them, and who, in many cases, were only kept from starvation by the earnings of relatives in other countries, 51161.

Failure of Potato Crop.

Owing to congestion and the inferiority of the land of small tenant farmers in the Union, the crops were an easy prey to disease in many forms, but especially acute distress resulted from the failure of the potato crop, and in 1905 and 1906 (perhaps including a part of 1907), £8,000 had been expended on relief, 51161-3.

Migratory Labour.

The number of migratory labourers annually leaving Swinford Union for England, was over 5,000—*i.e.*, fifty per cent. of the number of the whole of Mayo, and fifty or sixty per cent. of the total male population of the Union between the ages of twenty and sixty years, 51161, 51164-5.—They usually left in June, returning in October, or perhaps December—the average time of absence being, say four of five months; they brought back from £8 to £10, or £15 in the year, or even more, £10 on an average would bring £50,000 to the Union and be very good earning, 51266-7, 51275.

Emigration; Resulting Decrease in Population; Money sent Home by Emigrants, etc.

There was a constant disastrous drain on the population owing to the necessity for boys and girls in the flower of their age, emigrating to America, for the support of their families; the total emigration from Mayo since 1851 had been 176,817, of whom over 44,000 came from Swinford Union—a number almost equalling its present population; in 1881, the population had been 53,714, falling in 1901, to 44,162—a decrease of eighteen per cent., 51161.—The people of the Union as a whole did not go to one particular place or State in America, but those belonging to the same district usually went to the same place, 51206-9.—In witness's district, nearly every family had one or two members in America, and they sent a great deal of money home, 51268-71.

HENRY, Mr. MARK C.—*continued.*

Revival of Corn-milling, and starting of other Home Industries advocated.

If a stimulus were given to agriculture by the amelioration of land tenure in Ireland, and if corn-milling were revived in the Union, and other home industries, *e.g.*, weaving, wool, and lace-making, were started, intending emigrants could easily be induced to give their best efforts to making their own country prosperous; agriculture was now the only industry in the Union, and paid very badly; good employment of some kind would be very beneficial to the Union, 51161, 51203-5, 51237.

Purchase of Holdings by Returned Emigrants.

A great many emigrants had returned that year, some to settle; returned emigrants usually bought a holding of perhaps five or ten acres at an exorbitant price, or else raised the status of a poor family by marrying into it; every year this was done more; the holdings bought had not been held in the families, and witness did not know what become of the sellers; there was not the slightest aversion on the part of local people to these transactions which were voluntary on both sides; the standard of comfort of the buyers was much higher than that of the poorer local people, 51210-9.

Raised Standard of Living.

Witness could see a great improvement in the method of living in the Union; the houses were neater, and where the Congested Districts Board had any authority, there were no pigs or cattle allowed inside them; this custom still prevailed in places uncontrolled by the Board, but the Parish Committees had made a great impression, and people were beginning to learn the wisdom of keeping their animals outside, 51220-5.

More Drainage Needed—Work of Congested Districts Board in this Respect.

There had been very remarkable improvements in the Congested Districts Board; the Board had done a very great deal and would doubtless do much more had they the power and money, *e.g.*, take up farms and make more improvements such as roads and drains; the Board had done much arterial drainage in witness's district, but there was much wet, bad land still undrained; a common scheme of main drainage throughout the country would be very beneficial; the drainage of the Lung had been a remarkable improvement; witness did not know that district well, but believed the river had been drained for many miles; the land had been much improved, agriculturally; it was said that people would now live on it; witness could not say whether work of this sort would make otherwise uneconomic holdings quite economic, 51227-32, 51244-9.—There was much room in the Union for improving the produce of the soil by improving its tillage; there were over 50,000 acres of mountain which could be well reclaimed, 51250.

Further Enlargement of Holdings Needed—Land Available—Possibility of Migration, etc.

The Congested Districts Board had acquired the Dillon Estate, but there were still in the Union 2,000, 3,000, perhaps 5,000 acres of grass land which should be broken up and re-distributed so that the occupiers might have holdings capable of supporting them, 51233-4, 51254-6.—There was probably not enough grass land in the Union to relieve congestion and raise the average holding to twenty acres, but great numbers of people seemed to be volunteering to migrate; there was far less unwillingness to migrate than formerly; it was unlikely that anyone would put obstacles in the way of the many people anxious to go, 51199-202, 51235-6, 51251-4.—There were nearly 5,000 holdings in the Union rated under £4, and in order to make the occupiers economic there must be improvement of the agricultural condition of the holdings and migration; granted these remedies, a fair number of people might remain on small holdings, going occasionally to England, or getting employment on the big farms in the district, and so, to a large extent, supplying the place of what are called labourers elsewhere, 51273-4.

HENRY, Mr. MARK C.—*continued.*

The Claims of Congests should be put before those of Tenants' Sons.

The Congested Districts Board when re-distributing grazing lands should consider the congests of the district before the sons of tenants in the neighbourhood, 51276-8.

Abolition of Dual Ownership by Compulsory Purchase Advocated.

Dual ownership should be abolished by a system of compulsory purchase; experience showed that where this was done the condition of the people improved; they took a more lively interest in land which was their own, and a little independence was infused into them; the State was now taking the place of the landlord, and rents were reduced; some would think no price was too great to pay in order to get rid of the landlord, 51163, 51179-85, 51196-7.—The tenant's ownership seemed to have existed from time immemorial, but might be said to have begun in 1881, as it had only then received legal sanction; before that the tenant had paid for his land time after time in his annual rent, but there was no other remedy than his buying again now, 51186-95.

Price in View of Compulsion—Claims of Landlord and Tenant.

In cases of compulsory purchase, the landlord should receive a sum which would make up to him his previous net income; this income, according to his view, subject to all deductions for collection, arrears, etc.; also the purchaser must be on terms which would enable the tenant to make a fair livelihood, *i.e.*, give him an economic holding; in the case of untenanted grass lands, the landlord might be said to have the occupation as well as proprietary interest, and though the purchase price could not be divided between the two, a tenant when planted on a new holding did, as a matter of fact, contribute to the occupation interest by giving something for the goodwill of the holding besides continuing to pay for the annuity afterwards; any loss involved in the transaction should be borne by the landlord, or, failing him, the State, 51164-78, 51279-89.—If a defaulting tenant were evicted, his right to his holding passed to the landlord, but a new tenant should not be asked to pay for this, 51291-2.

BLOSSE, Sir HENRY LYNCH.

See pp. 157-60.

Sale of Untenanted Land Conditional on Sale of Tenanted Land.

Witness was willing to sell every acre of grass land he possessed, exclusive of his demesne, conditional on the simultaneous sale of his tenanted lands; the Congested Ditsricts Board had the matter under consideration, 51293.

Price which a Landlord Should Receive—Method of Calculating Price, etc.

A landlord should receive for his land a sum which, invested at 3½ per cent., would yield him his previous net income; less than that would be unjust and unreasonable, 51293, 51297.—As to a 4 per cent. investment, most of the Mayo estates were entailed, and when stocks, low at present, rose, it was doubtful whether so high a percentage were possible; an owner in fee was, of course, in a different position from men in the hands of trustees; when law and order were enforced, Mayo was a gilt-edged security, but there were unfortunate men whose agents did not trouble to collect the rents, 51301-3, 51366-7.—The average rent collected annually should be ascertained from estate account books, and from that should be deducted costs of collection, law costs, agent's fees, taxation, money allowed tenants for rebuilding walls, land drainage—in fact, "estate expenses," 51299, 51311.

BLOSSE, Sir HENRY LYNCH—*continued.*

Occupation Interest in Untenanted Land.

The value of the "dual interest," recognised by Mr. Doran as belonging to the owner of untenanted grass land, was what the land would fetch in the open market, and was shown by the rent; witness admitted that the "tenants' interest" in such cases was a figment, a purely mental conception, and that in order to gauge the value of the two interests exactly, a tenant must be in occupation, and must not even be an eleven months' tenant; but what the landlord had received, grazing rent, less estate outgoings, should be at least the basis of compensation, 51323-5, 51357-69.—It happened occasionally that a landlord let land to a grazier for certain years, and in others worked it in and out with other lands, and perhaps his own farm, but, even so, the rule of making the profits the basis of compensation would work fairly well, *e.g.*, if he bred 100 head of cattle on the land, he would make so much a head; certainly it would be impossible to apportion the exact net income of a grazing farm in these circumstances, and it would be necessary to take the income from the land as a whole, though a part might be his own demesne, which was not in question, 51339-44.

Movements of Rental of Grass Lands—Question of Deterioration.

Witness could not say how grazing rentals had moved lately, but there was no trouble in estimating them, and the same value was being paid; he did not let his grass lands by auction, but the same tenants had had them for years, and at the same rent; other landlords in the county did not complain of a decrease in rents, but in the midland counties it might be different; in places where cattle driving, etc., constantly occurred, there was no rent paid, 51370-5.—The price of land had only fallen officially, and with an object; the tenants would put it down with the help of the Estates Commissioners, but the landlord took what he could get, 51376-8.—The estate books would show the tendency of an estate; speaking generally, grazing lands in Ireland did not seem to be deteriorating; some land was running back into rushes and so forth from lack of drainage, but most of it seemed to keep very good sheep, and much draining, etc., was done, 51380-2.

Arrears—Effect in Calculating Price of Land.

A deduction from the net income on account of arrears of rent should only be made in certain cases; witness knew a man driving a car who had not paid rent for fourteen years, but on a well-managed estate arrears were usually wiped off; when too heavy, a tenant unable to pay being, as a rule, let off with an additional quarter's rent; on these estates it would be right to deduct for arrears on the average rental over ten or fifteen years, *i.e.*, allowing for good and bad years; if a landlord's income, being £1,000 a year, he had in ten years received £9,000 instead of £10,000, his net income should be based on the former sum, 51312-17.—Witness had never heard of cases of Scotch farmers and others brought to the district forty or fifty years ago, leaving with arrears of rent unpaid; he only knew of one Scotchman having come at all, 51326-8.

Tenant-rights in the Case of Evicted Tenants.

Witness knew Mr. Davis, from near Ballina, and would not pay much attention to his evidence concerning evicted tenants; in the case cited, the people had probably been paid so much for going out; in any case, no deduction should be made for confiscated "tenant-rights," as the landlord only got back his own land; the transaction must have taken place before the Act of 1881, when tenant-right had only existed in the North of Ireland; witness admitted that it would be very hard to be evicted without compensation, 51329-33, 51335.

Landlords' Expenditure on Improvements.

A great deal of money had apparently been spent on improvements by landlords years ago; on one estate, near Claremorris, over £10,000 had been expended by the present owner and his father; the tenants did a good deal of burning or scrawing, but

BLOSSE, Sir HENRY LYNCH—*continued.*

they did not cultivate the land well, 51333-4.—Information could probably be obtained as to improvements of the last ten or twelve years, but it would be very difficult to base present compensation and present dealing with the land on what happened forty or fifty years ago, as it was doubtful whether Mayo landlords kept books in those days, 51336-8.

Right of Appeal to an Independent Tribunal in Case of Compulsory Purchase Advocated.

If the effect of any deal were to give the owner his net income, *i.e.*, his rental, less estate out-goings, the questions in dispute could be easily solved; in case, however, of any *bona fide* dispute arising as to what was net income in an individual case, there should be the right of appeal to an independent tribunal; this was essential to justice, as all sides would be heard, and facts and figures be made public; it was most unsatisfactory that the buyer should practically fix the price, and the landlord have no access to the report of the inspectors and valuers engaged, so as to correct any possible error; this was the case when the Congested Districts Board or Estates Commissioners bought estates; the Judge of the Superior Court in Dublin might be appealed to in case of a difference of opinion between buyer and seller, but it would be preferable to have three judges to form a proper Court of Appeal, and there should be no assessors sitting; it would be very objectionable to have a politician appointed as valuer; a Court of Appeal would only be necessary in case of the Board being granted compulsory powers, 51382-9, 51394-5.

Compulsory Powers Unnecessary.

If acquisition were on the basis of net income, the landlord, unless quite exceptional, would be so willing to sell, that compulsion—a mistake in any circumstances—need never be used, 51390-3.

Comparison of Claims of Sons of Tenants with those of Congests.

Witness did not believe that the dividing up of all the grass ranches in Ireland would be of real benefit, but in order to test the efficacy of the principle adopted by Government, he was willing that holdings should be enlarged and smaller tenants migrated; the uneconomic holders should have priority of claim, then those in the neighbourhood should be relieved, but some of these last would be willing to migrated to Roscommon, Westmeath, King's County, and other places, and thus leave room for holdings for sons of tenants; these should be on the estate as far as possible, so as to keep families together, 51293-8, 51319.—It would be impossible, though statistics might be made to show the contrary, to fill up all the grass lands, large though Irish families were; Supposing, however, that there was not sufficient land to relieve congestion, congests would probably have to be considered before sons of tenants, though this was not really just, 51305-10, 51319-22, 51345-6. ---If the landlord were to divide land amongst sons of tenants, he would choose men whose fathers could start them, and who wanted a holding, and who would live on the land; it would be illegal on an entailed estate to charge a fine; if the Congested Districts Board had bought the estate, they should, if possible, either sell the holdings to the tenants' sons or charge them the agricultural rent, so that the selection would be by competition prices, 51347-55.

M'DONNELL, Rev. JOHN.

See pp. 160-4.

Migratory Labour; Decrease in Earnings in England.

There were 7,095 holdings under £8 valuation in Swinford Union, and upwards of 50 per cent. of the male population between the ages of twenty and sixty were migratory labourers; some went to England for the hay-saving alone, returning, usually in four or six weeks, with about £6; many did not now, as formerly, wait for the harvest, chiefly because they could not get work; the earnings in England were not one-third of what they used to be owing to machinery and other causes, 51396-402.

M'DONNELL, Rev. JOHN—*continued.*

EMIGRATION TAKING THE PLACE OF MIGRATION.

In witness' parish six heads of families, once migratory labourers, had emigrated with some of their children, leaving their wives and the others on their holdings; the cost of going to and from America was very great, and it was doubtful whether many would return, as they meant to do; children too were emigrating, instead of going to England where earnings had decreased, and where it was not worth while remaining so short a time, 51402-7.

EVICTIONS.

In twenty-five years 120 families had left the parish, mostly through eviction; the lands were chiefly in the hands of the owners, except a few handed over to planters, and no compensation had been given; in some cases evictions had not been for non-payment of rent, but simply to make a farm for the owner. when the tenants were sent to the mountain and rocks; these cases had occurred before the Act of 1881, 51407-9, 51416.

DEMORALISING EFFECT OF GOVERNMENT RELIEF AND WASTE OF PUBLIC MONEY BEFORE PASSING OF LOCAL GOVERNMENT ACT.

For about twenty-five years past Government had often had to send relief to Swinford Union owing to the failure of the potato crop, but Government remedial measures had generally been too late, had been demoralising in their effects, and had done little permanent good, while the administration had involved an enormous waste of public funds; certainly now, under the Local Government Act, responsibility for relief rested first on the Guardians, then on the County Council, while Government gave relief when the cost was greater than it should be; on the last last two occasions there was no observable demoralisation, this year's administration of the Relief Act being, as far as it had gone, exceptional; the scheme being local, many works of permanent utility had been done with practically very little expense of administration; former remedial measures had failed because the people had not been consulted as to the most useful works, and had had no voice in the administration of the money, whereas now it was to their interest to see that a fair day's work was done, 51409-16.

ACQUISITION OF GRAZING LANDS FOR THE ENLARGEMENT OF HOLDINGS, AND MIGRATION, ADVOCATED.

Vast grazing lands once belonging to Swinford Union, and from which the poor had been evicted, should be given back to the Union; within the Union there was £3,842 worth of land in the hands of fourteen owners and thirty-nine graziers, used mostly for grazing alone; in Kilasser there were about 1,300 acres of grass lands, non-residential holdings, valued at £500; 100 holdings under £3; 500 under £5; 200 under £10; on Joynt's Estate there were 150 tenants, 110 of whom were under £5 valuation; the untenanted land in the district should be acquired, if possible, by agreement, if not, by compulsion, to make the small holdings economic; Migration of some young thrifty families from the locality should be encouraged by allowing them fair compensation for what they gave up, while a reasonable value was put upon their new acquisitions, according to the locality, and not above that of their new neighbours; many would be willing to go under these conditions; part of the five grass land of Straide should be given to people migrating from Callow, while part should be bought and given for meadowing and pasture to tenants in Callow, who now had to go five miles for meadowing and to buy it at auction prices, 51416-7.

UNEQUAL VALUATION OF LAND.

A grazing-farm of 134 acres, 2 roods, 7 perches was valued at £63 10*s.*; while Pat Hughes, an evicted tenant, was valued at £5 5*s.* for fifteen acres of mountain, and Bryan M'Nulty was valued at £15 3*s.* for forty-three acres; thus, bad mountain land was valued almost as high as the grazing-farm, 51416.

LARGE DRAINAGE SCHEMES ADVOCATED.

The pastures were ruined, and the people's hay carried away by floods, which left, besides, a deposit so injurious to sheep and cattle on the pastures that no one who knew would buy the animals grazed there; it was necessary that some body like the Congested Districts Board should have power to deal with the drainage of large rivers—main drainage—both on their own and other lands; the tenants benefited would be glad, if necessary, to bear a portion of the taxation involved, and the balance of cost should be paid by Government, as it would be useless to look to the owners, who, with few exceptions, had never shown any interest in the people's wants, 51418-23.

WORKING OF THE LAND ACT OF 1903 PREVENTED BY THE LANDLORDS.

Landlords throughout the Union had made land purchase impracticable, except in a few cases, some of which had already been proved bad bargains; it was not true that the people had prevented the working of the Land Act of 1903, for shortly after its passage, Guardians had, by unanimous resolution, written to all the landowners in the Union, stating the wish of tenants to buy under the Act, and asking them to name prices; many had not replied, others had written abusively, while others, as if by arrangement, had said they were unwilling to sever the friendly relations that had always existed between their families and their tenants, though, in many cases these relations could scarcely have been truthfully so described; the landlords were seldom willing to sell either to the Congested Districts Board or the Estates Commissioners, some saying that as Sir Anthony MacDonnell had said he would not sell to his own Board, so it was unreasonable to ask them to do so, 51423, 51435.

PRICE OF LAND; DANGER INVOLVED IN THE EXTENSION OF ANNUITY PERIOD BY ACT OF 1903.

No landlord in the Union, since the Act of 1903, had offered to sell for less than from 21½ to 24½ years' purchase, whereas before, some of these estates had been offered for from sixteen to nineteen years' purchase, the former being all of second term, the latter mostly of first term rents; an estate was now being negotiated at 21½ years' purchase that had once been offered at 16 years' purchase; the Congested Districts Board thought the price too high, because there was an average of perhaps four years arrears on the property; the tenants had doubtless consented because negotiations had been begun in a bad year, when the landlord had wiped out the rent with the running gale; the people had refused to pay the sixteen years' purchase before, because an adjoining estate had been sold for from eleven to twelve years' purchase—the Land Commissioners not having sanctioned the advance when the tenants had agreed to fifteen years' purchase; witness did not know in what year this had occurred, but admitted that the landlords had then been paid in stock standing at 112, 51423-30.—The tenants realised that when they had given sixteen years' purchase, they had paid four per cent., whereas now they could give 19½ years' purchase, and yet pay a smaller annuity; it was one of the dangers of the Act of 1903 that the practical effect of extending the annuity period from 49 to 68½ years, induced the tenant to give a larger number of years' purchase, 51432.—The Board would not buy at a price which, when converted into an annuity, the tenant would not be able to pay, and there should be power vested in some body to prevent this being done by tenants who, to rid themselves of a bad landlord, would gladly give a few years' purchase more than the value of the land; only two estates in witness's district had been bought under the Act of 1903, and the Estates Commissioners were dealing with them, 51432-5, 51447-8.

TREATMENT OF TENANTS BY LANDLORDS AND THEIR AGENTS.

Most of the landlords of the district have never given the tenants a reduction of rent in bad years, or even given them time to sell their stock, but had persecuted them, processing for even the hanging gale the day after it had fallen due (though the case could not be heard for months), and serving writs, if the rents were high; there were exceptions, like Mr. Orme, who had treated his tenants very well, 51435-7.

M'DONNELL, Rev. JOHN—*continued.*

—In some cases, too, the good intentions of the landlord had been frustrated by his agent; Sir Roger Palmer, for example, sent each of his poor tenants £1 every year through his agent, and usually even some of the very old people had to walk to the office, forty miles there and back, to get their money, though they paid their rent at another, generally a much nearer place; this could not have been the landlord's intention, and so far as witness knew, it had not been brought to his notice; the same agent had twice evicted a weak little family, the mother of which had just died; the second time he had thrown down the house, lest they should return; the tenant had been allowed back first on payment of rent and costs, but, being over seventy years old, he had again got into arrears; he had paid rent direct to the agent for forty years, when he had been able to migrate to England, but now when returning in winter to his old home, he had been sent to goal for three months, 51435-46.

Advantages of Purchasing through the Board.

Having seen the dangers of direct purchase, and owing to turbary rights, passages, boundaries, etc., in the Brett and Lynch Estates, and the consequent endless law proceedings, the people were anxious to buy only through the Congested Districts Board or the Estates Commissioners; in almost every case, they had told the owners they would agree to any price fixed beforehand by either of these bodies; those who had purchased direct were beginning to see they had deprived themselves of the extensive improvements carried out by the Board, 51435, 51449.

The Board's Work Hampered through Lack of Compulsory Powers.

In witness's parish, the Congested Districts Board had only bought the McCarrick Estate, on which were twenty-six tenants; though the property was small, the Board had made wonderful improvements in the way of drainage and accommodation roads, etc.; building new houses and putting slated roofs on old ones; the estate was very congested—sixteen of the tenants being under £5 valuation, and there were no grass lands, but close by was a grazing farm, valued at £14 5*s.*, which the owner had refused to sell, though his own tenants were valued at less than £2; this state of things prevented the Board making improvements on a large scale, *e.g.*, drainage and roads, and an economic division of bogs; operations being confined to an isolated estate involved a waste of expenditure; the Board should have compulsory powers to buy adjoining estates; in spite of difficulties, they had done much wherever they had operated—as on the Dillon Estate; also in Charlestown and Kilmore, which had been entirely changed by drainage, building, and the making of accommodation roads; they had done much by improving sanitary conditions to check the spread of consumption, 51448, 51453.

More Funds needed for Work of Parish Committees.

The Board's scheme of Parish Committees was the best ever brought into the country, and had infused into the people a spirit of emulation, improvement, and thrift; hitherto improvements had meant increased rents and taxation, but the people, by being associated with this scheme, were made to feel the work was done in their interest; their advice was asked for and followed; at first a reasonable latitude had been allowed, then, as the scheme had worked and the people had understood it better, more exactness had been required; the grants were too small, six, and in some cases, ten times the value of small grants having been given, at a cost of fifteen per cent. of the actual grant, or three per cent. if the value of the work done were considered, as indeed it should be; with more funds and the operations of Parish Committees extended, the homes of the people would, in a few years more, be made quite comfortable, and the land, with proper draining, manuring, and variety of crops, made to yield double its present produce; more land would be cultivated and the young men could stop at home; the Committees might also be given the money needful for relief of periodic distress, to ensure reproductive work being done, and that without demoralising results; it would be well, too, if they were associated in some way with the schemes handed over by the Board to the Agricultural Department, touching cattle, horses, pigs, and poultry, spraying, manuring, and seeds, 51448-9.

M'DONNELL, Rev. JOHN—*continued.*

Livestock Schemes; Criticism of Department's Operations.

Though much had been done by the Board to improve the breeds of cattle, pigs and poultry, the efforts to improve the breed of horses had had very bad results; the Agricultural Department had done very little in regard to the schemes handed over to them, and that with less good effect than the Board, which had received no subsidy from the rates; the Department had had £1,200 or £1,300 from county rates alone, but had done little in Swinford Union with the funds at their disposal; whereas the Board had distributed bulls at £12, £15, or £20 each, the Department had charged £40 in the district that year; certainly the price of bulls varied, but the Department should change the system of giving premiums and reduce the initial price to the buyers, to whom £40 was prohibitive, and who had consequently had to give up improving the breed of cattle, 51448-9.

The Market for Pigs, Poultry, etc., should be regulated by the Department.

The Department working on much the same lines as the Board, had improved the breed of pigs and poultry, but the people were still at the mercy of the buyer; slaughter-houses should be established at convenient centres; the Department should get a market for pigs, poultry, and eggs, and should regulate, as far as possible, they now excessive ruling rates, while much of the offal now lost to the seller might be saved for him, 51449.

Creameries and Home Dairying.

The Department had done nothing in this district in regard to butter and creameries; the people were suspicious of these last, because when rents were being fixed, the question was always asked if the holding were near a creamery; while admitting that butter fetched a higher price in creameries, witness could not personally approve of them; the people of the Union had on an average only two cows, and those poor ones; 3*d.* a gallon for milk did not seem a fair price, considering the time spent in getting it, the expense of sending it, the want of milk, butter, butter-milk, etc., at home; it was doubtful if children would get enough sweet milk in creamery districts; in a few years, too, the future wives of farmers would not know how to make butter; when, with the encouragement given by the Congested Districts Board, each farmer had a nice dairy and knew how to treat his cattle, milk, etc., it would be far better to have a "butter factory" at a convenient centre, where butter would be paid for according to its quality; this was done in Canada where, too, cheese was sometimes made instead of butter, when it paid better; this scheme would keep girls at home and fit them to be good housekeepers, and it could be carried out, in spite of difficulties, if encouraged by the offering of prizes; the Parish Committees should be associated with these schemes; the people whom witness knew did not believe in the Department's itinerant instructors; it would be better and cheaper to send an intelligent member of the Parish Committee and an intelligent farmer's daughter from each parish to Glasnevin for six weeks or so, and thus associate the people themselves with the scheme, 51449.

Spraying.

Spraying was the great need of the district, but the Department had done nothing for it in this direction; after refusing last year they had at last been induced with difficulty to bring machines and sell them at the price at which they had previously been offered by the Board, viz., 24*s.*; the Department had only sprayed some plots for seed potatoes, chosen by themselves as examples, and some along the road in certain districts; the Department or the Board should, through the Parish Committees,

M'DONNELL, Rev. JOHN—*continued.*

see that no spraying material was sold without a guarantee as to purity, and samples should be taken for analysis, as people would buy a cheaper article unless they knew it to be inferior, 51449.

TURBARY.

In this district alone there were perhaps 1,700 acres of deep bog, 820 acres of which belonged to one man; this, though valued at a few shillings, he was selling for £2, £3, and even £7 per acre; the District and County Councils would have to deal with this question—a serious one for ratepayers; all surplus bog should be taken over by some body, as the Congested Districts Board or the Estates Commissioners, and after each buyer had been given certain turbary, the rest should be vested in that body for the general use; an ample supply of turbary for the people would be a serious matter in the future, 51449.

AFFORESTATION OF WASTE MOUNTAIN LANDS ADVOCATED.

It would be beneficial if waste mountain lands, *i.e.*, those in the hands of owners, were planted, as they were now almost useless; in carrying out a comprehensive scheme of afforestation, mountains might be required where tenants had grazing rights, but this pasture need not be touched, though probably the people would not object to its being planted if the matter were explained to them, 51449-52.

FINN, Mr. PATRICK.

See pp. 164-6.

ACREAGE AND VALUATION OF CLOONTIA, MIGRATION FOR ENLARGEMENT OF HOLDINGS ADVOCATED.

Cloontia had belonged to Jonathan Rashleigh, of Cornwall, but had been bought by the Land Commission in December, 1904; there were 140 holdings, of from four to ten acres of reclaimed bog, most of them valued under £2; there was no untenanted land on the property available for the enlargement of these, but half the tenants might be migrated to the big grass ranches in Mayo and Roscommon, and their holdings divided amongst the others, 51454.—Witness and many others could willingly migrate if they were each given a thirty-acre holding with a house on it in Roscommon; he could not say what sort of reception they would get there, but the difficulties of migration would be greatly lessened if three, four, or six men went together from one parish, taking old associations with them; certainly it would be well to see a farm before deciding to migrate to it, 51524-33.

GOVERNMENT AID FOR RECLAMATION OF BOGS ADVOCATED.

There were several thousand acres of shaking bog land—commonage—where the tenants grazed cattle; some acres were measured into the holdings now, and the tenants expected the rest to be divided amongst them, as it was really theirs, and no one else claimed it; failing migration they would build roads through this, drain and reclaim it, and so be able to add considerably to their present holdings, if Government would keep them financially; witness admitted that as his property would become more valuable, the tenant might and ought to pay something by way of instalment to the public body that had advanced him the money, though they would not be able to pay much, 51454-72.

WITNESS PARTLY DEPENDENT ON HIS BROTHER'S EARNINGS IN ENGLAND.

Witness was a farmer, with between seven and eight acres of reclaimed bog land, of which valuation was £1 18s., the rent £1 11s.; he and his neighbours had grazing in common and rights on the cutaway bog; he was married and had a family, and was partly dependent on a brother, joint-owner of the farm, who worked in England; witness only worked on their own land, a bit of which he had reclaimed himself, while the rest had been done by

FINN, Mr. PATRICK—*continued.*

his father, grandfather, and others; the soil was fairly good when first reclaimed, but was nearly worn out; the stock consisted of two cows—partly grazed on the bog—two pigs and a little mule; the calves were sold when a year old; what milk and butter there was was needed for the house; there were about two acres under potatoes and oats, a few patches of turnips, a small cabbage-patch, and about an acre of meadow; the rest was pasture; the potatoes, though sprayed, were not good that year, 51454, 51481-95, 51498-502, 51511-23.

SPRAYING FACILITIES.

Everyone sprayed with a broom in witness's district, and had never even seen a spraying machine, but they would gladly use any facilities given them in the way of machines and mixtures, 51503-9.

MORE MONEY NEEDED FOR POOR PARISH COMMITTEES.

The only obstacle to the proper working of the Congested Districts Board and the Parish Committees was lack of funds; their grants were too small to enable the people to make much needed improvements; induced by a grant of £2 from the Parish Committee, a man might begin building an outhouse which would cost him £10 before it was finished; he would have to borrow the £8 or buy his material on credit; he had to get galvanised iron and timber, and the mason's work was costly; the grant was generally for material, and the rest was a matter of work which he could usually do himself if he had a little help—otherwise he must pay for labour; witness admitted that the man was virtually paid for doing his own work, 51472-80.

POVERTY OF THE DISTRICT—COMPULSORY PURCHASE ADVOCATED.

In one townland on the property there were sixty-six holdings of so-called "land," each of which was valued under £2; every year 150 men went to England for the reaping, while about 63 had emigrated during the last few years; the relatives at home were dependent on their earnings; the only remedy for this state of things, prevailing throughout the district, was compulsory purchase of grazing lands by the Congested Districts Board of the Estates Commissioners; witness believed the landlords to be unwilling to sell, but could not adduce any facts in proof of this, 51539-42.

PRICE OF LAND BEFORE AND AFTER THE ACT OF 1903; DISADVANTAGE OF DIRECT PURCHASE.

Before the passing of the Land Act of 1903, the tenants on Captain Costelloe's property had bought their holdings at prices varying from 7 to 16½ years' purchase, and had been given decadal reductions; witness thought the land had been bought direct from the landlord; the rents had been second term rents, 51495-7, 51510.—On the adjoining property, under the Act of 1903, they had had to pay 18½ years' purchase for inferior land, because the holdings had all been sunk in arrears.

AMOUNT OF ARREARS.

The average number of years of the tenant on the holding was from two and three years and upwards; they were sued for arrears every May, and paid a year's rent in November; the landlord, in order to get his demand, had offered to wipe off all the old arrears and add the year's rent due in November, 1904, to the purchase money; as 1905 threatened to be a year of famine, the tenants thought it best to accept the offer, and pay 18½ years' purchase though the State would not have advanced half this had the land been inspected, 51533-9.—Had the tenants been able to pay through the Congested Districts Board instead of directly from the landlord, they would have had the advantage of works being opened, and improvements, *e.g.*, drainage, being made on the land, 51539.

FIXING OF PRICE BY THE BOARD IN CASE OF COMPULSORY PURCHASE.

Granted compulsory purchase, the Congested Districts Board should have the power to compel a tenant to pay a fair price for land, *i.e.*, as much as a

FINN, Mr. PATRICK—*continued.*

reasonable man would think the holding worth; witness thought that he himself would be willing to trust the Board, 51543-7.—On every estate in Mayo the tenants had expressed their readiness to buy if landlords were willing to sell, leaving the price to be settled by the Board or the Estates Commissioners; the tenants were always satisfied with what was just and reasonable, and their willingness to submit their case to an impartial tribunal, spoke strongly for the justice of their claims, 51548-50.

KEAVENEY, Rev. MICHAEL.

See pp. 167-72.

Valuation no Test of Economic Holdings.

Witness's parish, with the exception of one townland, lay within the limits of the Dillon Estate, and contained 600 agricultural holdings, 51570.—Of which the average area was almost 24 statute acres, 51570, 51634.—And the valuation £2 10*s.*, 51570, 51634.—They were almost all sold to the occupiers at fifteen years' purchase of the rent; the rent was fixed since 1881, at the valuation, and the annuity now payable to the Land Commission was little over 1*s.* an acre, 51570.—Witness gave an example of a reclaimed holding, 51634, 51634.—Of an area of over forty acres, 51659.—Of which the valuation was £2 3*s.*, and the rent originally £2 1*s.*, while the present annuity was £1 12*s.*, 51634-5.—This was all reclaimed by the holder and his brothers, less than fifty years ago, from its original condition of good mountain bog, 51660.—And the valuation had not been changed since 1847, 51634.—This holding produced this year twenty-one tons of hay, 51664, 51659.—And six sacks of oats, and two acres of potatoes, as well as supporting thirteen head of cattle, 51634.—The owner of this land had good clothes; his children were not migratory labourers, and he had given his daughter a dowry of £130, 51655.—He had no money from America, but lived out of the holding, 51656-7.—The holding was now in fair condition, 51660.—There were plenty of owners in the parish at a higher valuation, who were in abject poverty, 51634.—Mere figures of valuation were not by themselves a test of economic holdings, at any rate in Charlestown, 51634, 51644.

Migration.

The clergy were not opposed to migration, and the disinclination of the people to migrate was disappearing, though they would often express willingness to migrate, yet refuse when the offer became definite; witness thought they would be more willing to migrate in groups of six families who knew each other; migration was in some cases the only remedy for poverty, 51634.—But it was difficult to carry out, 51634.—Large holders were more suitable for migration than small, 51642.

Parish Committees—Funds, Grants, etc.

Witness suggested the enlargement of the powers of Parish Committees as a remedy for poverty, 51686.—The election of Parish Committees should remain as at present, 51637.—But they should have more funds, or they would not be workable; witness used to get £160 for his Parish Committee, and this year had only £80, for the money available remained the same, while the number of grants increased; the money now expended by the Agricultural Committee, and under the County Schemes should be handed to Parish Committees in the congested districts, 51641.—It would be reasonable to raise the limit of valuation in determining parish grants from £7 10*s.* to £10, 51653.—But witness was not concerned locally with this, since he had hardly any holdings of £10; he thought that it could not be done while the available funds were so small, 51643.—Grants could not be more usefully given than to the Parish Committees, 51641.—Witness considered that it might be necessary to continue parish grants at the present scale for ten years, 51648-51.—Till the people had learned sanitary and other lessons, 51648.—It was difficult to get men to act on the Committees while the funds were so small, 51651.—He preferred his system of grants to the Donegal plan of prizes, 51652.

KEAVENEY, Rev. MICHAEL—*continued.*

Instructors in Agriculture.

Witness did not think it necessary at the beginning to give a permanent parish instructor any training 51645-6.—Though as intelligence and knowledge increased, it might be necessary, and a trained man under the Committee could superintend all the branches of improvement, now under the Department of Agriculture, 51647.—The permanent local instructor should himself have a farm, and should be given a reasonable remuneration for inspecting holdings and giving advice, 51637.—His own farm, probably, would need only superintendence, 51638.—In most farms, the produce could be doubled by a better system of agriculture, and since the Board had undertaken the management of agriculture in Charlestown, the produce of many holdings was 25 per cent. better, 51636.—Agricultural instruction should also be given in the schools, 51654.

Methods of the Board and the Department of Agriculture.

Witness thought the methods of the Department of Agriculture were less effective than the method adopted by Parish Committees; there were complaints that the Board was dilatory in dealing with the Estates Commissioners; though at one time the tenants of congested holdings were restive, they now wished the land had remained longer under the Board, to enable trees to be planted, 51634.

Grass Lands.

Witness advised the acquisition of tracts of untenanted land, to be used as common grazing lands for congests, 51638-9.—This plan was followed at Harrogate; if the Board found difficulty in retaining the land, trustees might be appointed, 51639.—Common grazing was an easy expedient, and had been recommended by Mr. Doran, 51640.

Constitution of the Congested Districts Board.

Witness thought that the Board should consist of twelve members, instead of ten as at present, 51572.—Six should be elected by the County Councils and six nominated by the power which at present appointed the Board, 51571, 51597.—There were eight congested counties needing representation, 51576.—Four of the large counties should have a member each, and the four others two amongst them, 51577.—There would be a difficulty in settling the districts, but Leitrim and Sligo, both congested counties, now combined to manage their joint asylum, 51577.—It was desirable to have local members, so as to get into touch with the districts which the Board operated, 51589.—They would not doubt try to get as much as possible for their own locality, 51604.—And there was an apparent danger of a man's efficiency being judged by the money he got for his county, but members would find it best to work for the common good of the whole country, 51606-8.—And this evil would be counterbalanced by the increased knowledge of local needs, 51609.—The Council might elect men from outside its own body, 51611.—The object of training these local men would be for their knowledge of local requirements, and to consolidate local influence and support for the Board, 51616.—These objects might be attained by appointing a small Board of the best men obtainable, and electing, in the manner suggested by witness, an advisory body in each congested district, to bring to the notice of the Board the requirements of their particular district, 51590.—This body would carry a certain weight, increasing with the reasonableness and importance of its recommendations to the Board, 51591.—Witness proposed that the nominated members should be nominated as at present, 51572.—The Chief Secretary, and Under-Secretary should not be on the Board at the same time, 51576-7.—But when the Board was not sitting (that is, for twenty-eight days in the month), the urgent orders were now passed by the Under-Secretary, 51594.—And the Chief Secretary, being much in England, was able to attend only three meetings of the Board yearly, 51594.—In view of this, witness suggested that the Chief Secretary should be a member of the Board for the purpose of keeping it in touch with the Government, but should not act, 51594.—As was done at present, 51595.—This would make the non-elected members of the Board

KEAVENEY, Rev. MICHAEL—*continued.*

consist of 5 nominated and one *ex-officio* member, the latter being the Under Secretary, 51600-1.—With regard to the question of members of the Board being also members of the Department of Agriculture, witness thought it was for the body nominating members to consider whether the same man had time for both offices, 51581.—Those on the Board should devote as much time as possible to the work of the Board, 51582-3.—The experience of officials like Mr. Green, of the Department of Agriculture, was most useful, and he should be a member of the Board, 51579-80.—The Government could well include him, or any fishery representative, among the nominated members, 51611-3.—For the fishery representative was not confined to a locality, 51614.—The Board should work harmoniously with the other bodies with which it came into contact, such as the Department of Agriculture and the Estates Commissioners, 51584, 51586.—And it would be an advantage to discuss points of difference face to face, rather than to prolong paper correspondence, 51586.—Considering this, witness might reconsider his statement that the Vice-President of the Department of Agriculture should not be a member of the Congested Districts Board, 51578, 51584, 51586.—And it would be an advantage also if one of the Estates Commissioners were a member, 51584.—Though it might be awkward when the different bodies were in conflict, 51586.—The nominated members should sit for life, and the elected ones for three years, the duration of a County Council, 51682.—There would be some difficulties in this plan, but witness thought the permanent members would keep the Board in equilibrium, 51603.—If witness's plans were tried the Board would contain several of the same members as now; witness was aware that the Chief Secretary (or, in his absence, the Under-Secretary), the head of the Department, and the Inspector of Fisheries, were at present all members of the Board, 51621.—And a Land Commissioner, whom witness proposed to replace by an Estates Commissioner, 51618-20.—This left only two of the six nominated members who could be chosen by the Government for special knowledge, 51622, 51624.—It appeared that a larger Board was necessary, 51625.—This might be met by giving each congested county a member, and adding to them eight nominated members; this witness would recommend, if he thought so large a Board as 16 would work harmoniously, 51626.

CONTINUITY OF WORKING.

The work of the Board should have continuous supervision, 51627.—And there should be permanent members, but perhaps not working exactly as the Estates Commissioners worked, 51629.—The work of the Board came under three heads, agriculture, fisheries, and industries, 51629.—If there were three vice-chairmen, one for each Department, working under the chairmanship of the Chief Secretary, and associated with members having local knowledge, it might be an advantage, 51633.—It was an advantage to have such men as Father O'Hara and the Most Rev. Dr. O'Donnell connected with the work of the Board, 51631-2.—Witness thought that the Department of Agriculture worked very well through its Chief Inspector, without a vice-chairman, or constant interference, 51632.—As to the points on which he gave no evidence, witness agreed with Father Fallon, 51570.—These were :—The relative merits of the methods of the Commissioners and the Board, in the enlargement of economic holdings, and the necessity for compulsory purchase; in the other particulars of Father Fallon's evidence witness also agreed, 51570, 51634.

HENRY, Rev. MARTIN.

See p. 172.

COMPULSORY POWERS.

Witness urged on the Commission the importance of compulsory powers of purchase, by which the Congested Districts Board could obtain grass lands and tenanted lands for the enlargement of existing holdings, 51671.—He wished to include both tenanted and untenanted lands, as the landlords would sell neither, 51661-2, 51671, 51675.—The landlords sometimes refused to sell, 51661, 51665.—And in others, asked an

HENRY, Rev. MARTIN—*continued.*

exorbitant price, 51661, 51667.—Witness thought compulsory powers should provide for purchase at a fair price, 51666.

"FAIR PRICE."

A fair price was not calculated on the net revenue of the land, for second term rents were sometimes as unfairly high as first term rents, or higher, 51667.—Witness gave as an instance a case where tenants had been deterred from going into court by threats of being put to expense if they did so, 51670.—They were thereby persuaded to agree to rents settled by the agent, 51667.—He gave them a reduction on first term rents, but charged for bog, 51667.—And also £1 or £2 for arrears of rent, making the so-called reduced rents higher than the original rents, though nominally they were reduced by two or three shillings in the £, 51667-8.—The tenants were then asked to pay 22 years' purchase on these rack rents, 51670.—In cases where the tenants had gone into court, the landlord had previously persuaded one or two other tenants to settle out of court for a reduction of 2*s.* or 3*s.* in the £, 51663-4.—The tenants who agreed, were not free agents, being in arrears, 51664.—But the agreement influenced the court to fix the same reduction for other tenants, 51663-4.—Though it was insufficient, 51663.

CONGESTION IN FOXFORD.

There was an urgent need of land to enlarge holdings in Foxford, where the valuation of holdings was under £4; the average valuation of about 400 families within two miles of Foxford was £2, 51661.

HOUSE IMPROVEMENT.

The scheme of the nuns for improving houses round Foxford had been a great success, and was now in the hands of the Parish Committee, 51672.

MORRIN, Mr. JAMES.

See pp. 172-4.

CONGESTION IN SWINFORD.

Swinford Union was exceptionally poor, and always on the verge of famine; if the whole Union were divided into £10 holdings, more than half the present landholders would be left without any land at all; the valuation of the land was £34,450, 51676.—These figures included demesne, 51677.—And the number of holders was nearly 8,000, 51676.

INDUSTRIES—PROMOTION BY GOVERNMENT SUBSIDY.

It was absolutely necessary to establish some industries; as labour was plentiful and without outlet; the Government should establish and subsidise industries, a plan which had great possibilities of success; many people who had money to invest would prefer a reasonably safe Irish investment, to precarious foreign stocks; the initial step must be taken by Government; and £1,000 or £1,500 could be raised locally; traders in the town of Kiltimagh a year ago, had volunteered to invest from £100 to £300 in a factory, which would be likely to give employment, but the project lapsed for want of capital, 51677.

PIG FATTENING—BACON FACTORIES—VETERINARY SURGEONS, ETC.

The only existing local industry was the raising and fattening of pigs, the Department had done something towards the improving the breeds of pigs, but they had done nothing to arrest disease among pigs in Mayo, and there were only two veterinary surgeons in the county, Mr. Stirling and Mr. Hamilton, 51677.—The Department should provide veterinary surgeons who were required in nearly as large numbers as medical men, 51678.—The veterinary surgeons of the Department went, so far as possible, to all the districts where the Department was at work, but it was impossible for two or three men to attend to the whole county, 51679.—On one occasion no surgeon could be got to attend a cow at Kiltimagh, though one was summoned by telegraph from Sligo; bacon factories

MORRIN, Mr. JAMES—*continued.*

might be started by the Government, to provide a market for the poor owner of pigs; crushing mills should be established, to enable the poor holder to utilise his grain for feeding purposes, 51680.

CASE OF MR. KENNY—PRIESTS AND MIGRATION, ETC.

Witness had read in the *Western People* Mr. Kenny's statement that the people dare not tell the truth on oath upon certain occasions, 51680.—Mr. Kenny had said that twelve jurors perjured themselves, 51686-8.—Witness, who had intimate knowledge of the neighbourhood, considered Mr. Kenny's evidence very prejudiced, 51688-9.—The statement as to perjury was, in witness's opinion, untrue, 51690, 51694.—If the men of Culthrasney, to whom he referred, had not been away in England, they would have come before the Commission, and denied that their priest had dissuaded them from migrating, lest his collection should be diminished; witness was present at a meeting at Kiltimagh Town Hall, when the parish priest had impressed on the people the foolishness of remaining on small holdings all their lives, and had offered to aid them in migrating, 51664.—Mr. Kenny himself was prosecuted by the Crown for suborning witnesses, 51680.—The decision of the court was "informations refused," but this was on technical grounds alone, 51681-4.—Witness produced a statement to this effect by Mr. Jordan, Petty Sessions Clerk, 51684-5.—A County Councillor had informed witness that Kenny had offered him a blank cheque to fill in for any amount he wished, provided he induced his witnesses to suppress their evidence, 51690-3.—The County Councillor was present, and would make this statement, 51692-4.—Witness had heard Father Keaveney's evidence about Parish Committees, and endorsed it; they had done an immense amount of good, and for £100 grant, would get £500 worth of improvements, 51695-7.

ROUGHNEEN, Mr. THOMAS.

See p. 174.

DENIAL OF MR. KENNY'S EVIDENCE—ATTEMPT AT BRIBERY.

Witness denied the truth of Mr. Kenny's statement at Castlebar, which had been reported in the *Western People*, 51698.—Witness had a case against Dr. Burke, 51698.—He had brought a charge against the doctor, 51702, 51708.—As a result of which the Local Government Board had dismissed the doctor, 51703, 51707.—Mr. Kenny had tried to persuade some of the witnesses in the case that the whole case was settled, and their evidence not required, and they had complained of this to witness, who required their evidence to substantiate his charge, 51701.—Mr. Kenny had informed witness that he had settled with the witnesses against Dr. Burke, and had offered witness a blank cheque signed by Dr. Burke, telling him to fill it up for any amount he liked; witness had ordered Mr. Kenny to leave his house, 51701.—Witness had not the cheque, and had never taken it, 51700-1.—Witness had not given evidence before the Local Government Board inquiry, 51702, 51708.—It was not this case in which the decision was "informations refused"; witness had not stated in court that he was offered the blank cheque, as he won his case without doing so, 51709.

CLERGY AND MIGRANTS.

Witness believed that the clergy in various parishes were most zealous in influencing their parishioners to migrate, 51710.

RUSSELL, Mr. T. W.

See pp. 175-89.

EXPERIENCE OF WITNESS.

Witness succeeded Sir Horace Plunkett as Vice-President of the Agricultural Department at the latter end of May, in 1907, 51711.—He had only been three months in office, and two of those months had been spent in the House of Commons; he had not yet mastered the details of the Department, 51712.—He did not wish to give evidence in favour of one Department more than another, 51713.—He had for thirty years been a close student of the question of relief of congestion, 51815.—He had never lived in a congested district, but had gone over the congested districts, 51816.—His personal share in the relief of congestion had consisted in exposing the miseries of the Western population, both as a private member of Parliament and as a journalist; he was not an expert in dealing with congestion from a practical standpoint, 51317.—The views of such experts were of the first importance, 51818.

WASTEFULNESS OF HAVING FOUR DEPARTMENTS WORKING IN ONE AREA.

Four Departments were working in the congested districts area, an arrangement conducive to great waste, and probably not to good work; the Estates Commissioners were engaged in sale and purchase of land and endowed with funds which, setting aside the difficulties of the money market, were ample; the Congested Districts Board had, during many years, done valuable work with the funds provided by Parliament, and with a staff for carrying on the work; the Department of Agriculture and Technical Instruction also had funds and a staff; the fourth Department was the County Committee, a statutory body working under the Department of Agriculture, 51713-4.—Witness thought overlapping could not be avoided under this system, 51715.

FIRST SCHEME TO AVOID OVERLAPPING BY DIFFERENT DEPARTMENTS.

To avoid the disadvantages of this fourfold system the purchase and sale of lands in congested districts might be placed entirely in the hands of the Estates Commissioners; the improvement of land and development of estates might be carried on by Congested Districts Board; the educational work might be entrusted to the Agricultural Department and the County Committees, 51716-7, 51763A-70.—In this arrangement the Agricultural Department and County Committees might be treated as one department which practically they already were though the Committees were a local statutory body having their position secured to them by Parliament, a fact which should be kept in view, 51718.—The result of these two State Department—the Congested Districts Board and Estates Commissioners—being engaged in the work of buying and selling the land in competition with each other was the creation of an artificial market by which the owners of these slum lands were bound to profit at the expense of the State and of the people; the ample funds of the Estates Commissioners and the fact that they had a very large staff were the reasons why they, rather than the Congested Districts Board, should be entrusted with the sale and purchase of land; all estates bought by Estates Commissioners should be vested in Congested Districts Board for improvement, 51719, 51809.—The competition between Congested Districts Board and Commissioners for an estate did not amount to an auction at which the two Departments bid against each other, but prices paid by Congested Districts Board were slightly higher than those given by the Estates Commissioners, 51724-7, 51777, 51785-6.—Witness had been struck by the large price offered for Sir Henry Lynch-Blosse's estate, 51780-3.—He thought both Congested Districts Board and Estates Commissioners paid too much for slum land, 51778, 51784, 51787, 51877.—The fact that landlords preferred to deal with Congested Districts Board rather than with Estates Commissioners led to the inference that they had a good reason for doing so, 51810-4, 51877-9, 51915-8.—The average prices paid by Congested Districts Board for land might not be high, but averages probably did not give a fair idea of prices paid, as one man might receive a very large, and another a very small, price for his land, 51872, 51905.—Witness read an extract from Mr. Finucane's evidence given on page 143 of the Appendix to this Commission's Third Report, where it was stated that in 1903, Major Chichester Constable offered to sell to Congested Districts Board an estate comprising a small area of tenanted, and a large area of

RUSSELL, Mr. T. W.—*continued.*

untenanted land in Roscommon; in September of 1903, Board offered the vendor £48,220, exclusive of bonus, which was refused; in December of 1903 Board offered £50,000, exclusive of bonus, or £56,000, inclusive of bonus, and were again refused; in November, 1904, the owner, without mentioning his negotiations with Congested Districts Board requested Estates Commissioners to purchase, and their inspector, Mr. Lopdell, estimated the price of the estate at £38,615, 51906.—The owner refused the offer of the Estates Commissioners, and informed them that the Board had already offered £50,000; it appeared that three valuations had been made of the untenanted lands—one by Mr. Doran, one by two of the Land Commission's Assistant Commissioners for settlement of rents, who were deputed for the purpose at the Board's request, and a third by the Estates Commissioners' Inspector, Mr. Lopdell; the annual valuation of lot 1 of untenanted land was substantially the same in the three cases, but while the Estates Commissioners' offer for this lot was only £16,392, exclusive of bonus, Congested Districts Board's offer was £21,000; the explanation was that Mr. Doran's estimated price was calculated on thirty times the annual value, without bonus, or 33·6, the annual value inclusive of bonus, while Mr. Lopdell's was based on twenty-four times the annual valuation, exclusive of bonus, or twenty-seven times the annual valuation, inclusive of bonus; this showed a difference of 6½ years' purchase of the annual valuation; Mr. Doran's price inclusive of bonus, would if invested at 3½ per cent., yield an income of 117 per cent. on the gross annual value; Mr. Lopdell's would yield an income of 104½ per cent. on the gross annual value, 51908.—This instance showed the danger of averages, 51910.—If vendors were quite sure they could get their money sooner from Congested Districts Board than from Estates Commissioners, that would account for their preference for the Board, 51919-21.—An arrangement under which Congested Districts Board might improve and sell land which it had not bought, but which another had bought for it, might be difficult, but with co-operation should be feasible and useful, 57824-5, 51845-7.—The process would be that the Congested Districts Board, desiring certain lands they knew to be a slum estate, would express their desire to the Estates Commissioners, 51832.—This desire would be founded on their knowledge that the locality contained uneconomic holdings, and the purchasing authority would inspect the lands before paying the price, 51833, 51836.—Congested Districts Board ought probably to inspect the land before asking for it, but this would be a question for an Act of Parliament, 51834-5.—With co-operation there should be no difficulty over the double inspection, 51837-8.—The land purchased should be invested in Congested Districts Board for improvement purposes, 51839.—The collection of rents would remain in the hands of the Estates Commissioners, 51840-3.—In selling to tenants the annuity must be fixed by Congested Districts Board in view of the cost of reclaiming the estate and the price paid for the land, 51844, 51848.—An instance of the confusion arising from the existing system had occurred at Runabackan, where about 360 acres of land had been purchased by Mr. John Fitzgibbon and sold to Estates Commissioners; witness had visited Runabackan; the Estates Commissioners had striped the land and placed on it nine tenants with about forty acres apiece; the Estates Commissioners had made each tenant a free grant of £30, but there were neither stock nor buildings on the land, 51719-21.—These nine tenants were farmers' sons who had not previously had holdings, and the idea of giving them farms was to prevent them from emigrating; these tenants probably relied on getting means to purchase their stock from an agricultural bank established at Castlerea by the Agricultural Department, 51722.—There was much to be said in favour of the practice of giving holdings to farmers' sons to keep them in the country, though the prime necessity in Ireland was the relief of congestion, 51799-808.—Under the system proposed by witness the Estates Commissioners would have purchased this Runabackan estate and sold it to the tenants, and the Congested Districts Board would then have come in to deal with the necessity for

RUSSELL, Mr. T. W.—*continued.*

housing and offices; in Ireland the necessary cottage and offices could be erected at a cost of £150, which should be added to the annuity; if the land were a reasonable price this £150 would not unduly weight the annuity; Congested Districts Board or Department of Agriculture would then lend the tenants money from an agricultural bank to purchase stock and construct drainage, etc., 51722, 51728, 51868-9.—An example of the advantage of co-ordination between the Departments was afforded by the action taken by witness at Athenry, one of the most disturbed districts in Ireland; at Athenry the Agricultural Department had purchased 1,600 acres from Congested Districts Board for the establishment of an agricultural station or college where Department's stock, such as cattle and stallions for the province of Connaught, were to be kept; Department had taken care that the tenants on this estate did not suffer from the scheme, but though existing holdings had been enlarged a demand was made soon after Department began to start the station for the surrender of part of this 1,600 acres to the people of the neighbourhood; spikes were also driven into the meadows, and the man engaged in meadowing had his house fired into; witness then went to Athenry, where he received a threatening letter; he interviewed some of the men interested in this demand for land, and told them Department had gone to Athenry for the benefit of the people of Connaught, and that he could give them none of the land, as it was all needed for public purposes; witness also told them that he had seen the land grievance of the West at Athenry as he had never seen it before; that he had seen grass lands all round the town with not an outlet save by grass lands, while the people could not get a bit of land to grow a cabbage leaf to feed a cow to give milk to the children; witness had then promised to represent to Estates Commissioners the people's grievance, and he had since made an appointment with Estates Commissioners to meet him at Athenry, and as practically all the grass lands about Athenry were already in the hands of the Estates Commissioners he hoped to be able to settle this Athenry question by co-ordination between the Estates Commissioners and the Agricultural Department, of which he himself was vice-president; this particular difficulty might be settled in this way, or the outrages might be allowed to go on until the law had to deal with them promptly and put them down, 51722-3.—Witness cited the Athenry case as an instance of want of co-operation between the Department of Agriculture and the Estates Commissioners, 51731-2.—Acting as vice-president of the Agricultural Department, he was calling the attention of the Commissioners to conditions which the Commissioners could remedy, as they had the grass lands in their possession, and he was thus effecting co-operation between the two departments, 51734-49.—The Act of 1899, under which the Department of Agriculture was set up, contained a clause forming a consultative committee on education; the vice-president was chairman of that committee, and on it there was a member from the National Board and a member from the Intermediate Board; a similar plan was needed for the work in congested districts to give the three departments operating some official method for getting into communication, 51750-1.—The presence on Congested Districts Board of the vice-president of the Agricultural Department was useful for the purposes of co-operation as keeping him in touch with Board's work; witness attended Board's meetings as often as possible, 51889-90.—The presence on the Congested Districts Board of the Under-Secretary was also desirable, as there ought to be some member of the Government on the Board, 51891-4.—It was desirable that there should be on the Board a considerable representation of the districts, 51901.—The land kept for the college at Athenry was good land, 51854.—A great deal of it was put into tillage, 51855.—Witness had had nothing to do with the selection of this land, as he had not been long in office; the worst land could not be used for keeping the stock for Connaught; witness had satisfied himself that the tenants on the estate had been treated fairly, and had had additions to their holdings from land that was partly good, partly bad, 51856-8.

RUSSELL, Mr. T. W.—*continued.*

Second Scheme to avoid Overlapping.

If the land question could not be dealt with according to the first scheme proposed by witness one body only should do the work of purchase and sale of land in congested districts; this body might be either the Congested Districts Board or the Estates Commissioners, 51723, 51763A-70, 51776, 51870, 51874.—Witness would not give an opinion as to whether Board or Commissioners should be the body to purchase land, 51754-8, 51775.—Witness had been over congested areas during twenty years and recognised the enormous improvement since effected; no one appreciated more than himself the work of Congested Districts Board; his only objection was having two departments working alongside each other, 51875-6, 51897.—The Agricultural Department would probably not object to withdrawing from supplementary schemes and leaving them to Congested Districts Board, though the schemes of the county committees, which were statutory bodies, could not be stopped, 51723, 51788-90, 51880-2.—County committees were doing excellent work and improving at it, 51791, 51929.—Witness would not support an attempt to supplant these statutory local authorities and replace them by a nominated board, 51926-36.—At present Department's supplementary schemes overlapped with work of parish committees; Department was spending £10,000 a year on supplementary schemes, educational and otherwise, 51792-4.—Parish committees did excellent work giving grants for small matters, such as slating a roof or building an outhouse, which were outside Department's work, 51795-7.—The proposed extension of the work of parish committees to such matters as instruction in agriculture would involve overlapping with Department, 51798.—Educational work, such as domestic economy work, should be managed by Agricultural Department or Congested Districts Board; at present it was carried on by both with bad results, 51722, 51729-30, 51763.—Educational work could not be carried on by Department with the £2,000 received from Congested Districts Board under Mr. Wyndham's arrangement; witness, as vice-president of Department, declared emphatically he would not be responsible for the work with such small funds; the estimate for this work in 1907 was £9,700, 51723, 51762, 51884-7.—Increase of funds for education could not be expected from Congested Districts Board, which itself required more money, and therefore the Department of Agriculture had no resources but its own funds or an additional Government grant, and Department's funds could not provide more for this purpose, 51760-2.—Witness knew from personal observation that schools in Mayo overlapped, 51859-60.—Recently two schools of domestic economy had been sanctioned by Board of Agriculture in Dublin, and witness found the Congested Districts Board had a school so near that there must be overlapping between it and Board of Agriculture's schools, 51863-4.—Such occurrences were likely under existing system, 51865-6.—Of the alternative schemes proposed by witness he himself preferred that which placed the work in congested districts under one authority, 51819-23.—Even if Congested Districts Board were made the only authority within congested areas, they would still have to co-operate with Estates Commissioners for the purchase of land which lay outside those areas, and was needed for relief of congestion, 51922-5.—The suggestion that fishery work should be placed under the Department went with witness's general statement that there should be a single department, 51937.

Compulsory Acquisition of Grass Lands.

Acquisition of grass land was an absolute necessity; its difficulty was mainly a financial difficulty, and concerned the finance of the Land Act, 51940, 51942.—This portion of witness's evidence was given in his private capacity, not as Vice-President of the Department of Agriculture, 51941.—When the Land Act of 1903 was passed the Land Conference in the first place, and Parliament in the second, were told by Mr. Wyndham that compulsion would not be necessary; at the Land Conference witness and his colleagues on the tenants' side of the question set aside compulsion for the time being and combined for a general settlement, because they were assured that the landlords were willing to sell if they got an equivalent for their net income; witness thought that result had been a great one; he had never gone against the Land Conference; the position in 1907 was that in the better parts of Ireland the Act had worked well, bar the price, but in the congested areas, and the West, generally, the Act had not worked at all, 51942-3, 51976-85.—The present Commission would never have come into existence if the Act had worked in the Western provinces as it had worked in the rest of Ireland, 51986.—The explanation of this inoperativeness of the Act was not the position of the money-market, and the lack of sufficient money to pay the landlords; the great difficulty was that the great grass lands of the West could not be had at a reasonable price; this was a grave problem for Government, because the people had been promised these lands in Parliament by the mouthpiece of the Government; witness was told there was plenty of land to be had in the West of Ireland, though the Government did not seem to think so, when recently they passed the Evicted Tenants Bill; very extraordinary terms on which the land was to be acquired had been proposed by one branch of Parliament, namely, that the full market value was to be given for the land, plus a bonus of 12 per cent., plus the benefit of the Land Clauses Act, which meant 10 per cent., and in addition such arrears of rent were to be given as the court thought fit to grant; such terms put the settlement of the grass lands quite out of the question; compulsion should be applied to acquire these lands at a price that would permit their re-sale at a price the tenants could pay for them; the question of compulsion presented difficulties which witness thought could be overcome, because the peace of Ireland counted for a good deal, and the people must have the land; the real difficulty of land purchase at the moment was that even if compulsory sales were ordered money could not be got to pay for the lands; to meet this difficulty there were two ways; if the landlords were to be paid in cash at the same rate of purchase at which they had been paid, and which had leaped from an average of 17·3 years' purchase under the old Purchase Acts to 25 years' purchase under the existing Act, and if, in addition, there were to be compensation for compulsion as well as a bonus the acquisition of the land could not take place, 51943-8, 51979.—The price of land and the bonus as well as an addition for compulsion were not inserted in the Evicted Tenants Act, but witness thought that a great deal of the Lords' action in that Act was with an eye to the Act which would follow the proceedings of the present Commission, 51948-9.—The House of Lords would probably have been better advised if they had not proposed such high terms, 51950.—Witness would give the fair market value of the land, and allow the bonus to stand for compulsion in each case, 51951-2, 51988.—The landlords should receive for their lands a sum which, invested in reasonable security, would yield their net income; to this proposition the landlords agreed at the Land Conference, and had it been carried out the land question would be a long way towards settlement, 51989, 51991.—Three and a quarter per cent., that is, 25 years' purchase, was the rate of investment at the Land Conference, but since then Parliament had added to the securities in which money could be invested a very large number of trustee securities, some of them bearing 4 per cent., 51992-3, 51997, 51999.—Witness did not object to the principle that landlords should know the State was ready to purchase their property on the basis of the Land Conference proposals, but the net income, that is, the net receipts on second term rents for ten years, must be ascertained; it was not correct to take the rental, 51990, 51994-6, 51999.—The investments of the money to produce the equivalent should also depend on the Act of Parliament which superseded the recommendations of the Land Conference, because that gave the landlord a much higher rate of interest; one landlord taking advantage of this had had his income increased by £9,000 a year, 51999-2000.—Witness was far from saying that the adoption of the principles of the Land Conference would lead to a general settlement of the land question, 52008.—Land in Connaught, and in the West, generally, was a very different kind of security from that in the East; witness did not think that in consideration of this the arrears in past times should be taken into

RUSSELL, Mr. T. W.—*continued.*

account in calculating the landlord's net income for purchase; there were thousands of holdings in Connaught on which a fair rent should never have been fixed, and which the Land Commissioners, after the Act of 1881, ought to have returned as paying no rent at all; such holdings should have been treated as allotments. 52010-11.—A suggestion had been made that the landlord should be paid in stock; the medium of payment was changed from cash to stock in 1896, when stock was at 110; witness thought payment was made in cash under the Ashbourne Act; it would be unfair to pay in stock and give for £100 worth of land paper representing £100 but really worth only £82, 51951-3.—In September, 1907, tenants were buying on an average of 25 years' purchase, and land stock was a little over 80, so that in addition to the money raised and employed in actual purchase there was nearly one-fifth more to be added as loss on the stock; taking 25 years' purchase by the tenant, and one-fifth additional in the shape of loss, there were five years' purchase additional to be paid by the taxpayer, making the price 30 years' purchase, in addition to the bonus, which was 12 per cent. on the purchase-money, and at 30 years' purchase would make the whole price 33 years' purchase; besides this there was the upkeep of the Land Commission; the more exorbitant the price agreed to the worse was the security for the stock and the loss upon the flotation, and the higher also was the bonus, so that all this resulted from the basis of the Act of 1903, which set aside the old method of purchase by number of years' purchase of the land, and substituted for it a form of purchase by reduction; so long as the tenant secured his 20 per cent. reduction he had neither the capacity in many cases to inquire what his price was, nor was he concerned to inquire; another difficulty was that while land stock was not really inferior in security to consolidated funds the financial houses had been able to make a dead set against it as bog stock; chiefly from these facts, there was, in the Land Commission, an immense amount of arrears in the form of agreements for sale for which no money was available, 51954.—If purchase were allowed to continue at a cost of 33 years' purchase per acre financial ruin was inevitable; to suspend the operation of the Land Act would raise a tremendous storm in Ireland, and landlords and tenants would unite in attacking the Government responsible, but witness thought that if it were proposed only to alter the method of finance in as far as it was necessary to cut out the incidental loss, that is, the loss on flotation, the attempt would be so obviously justifiable in the public interest that no outcry would be sustained against it, 51955-6.—Estates, especially in the North of Ireland, which a year ago were not to be bought, were now coming into the market in a fashion which suggested that landlords anticipated the revisal of the finance of the Act of 1903, and the reduction of prices, 51956, 52006-7.—In the North of Ireland, at any rate, there would be a rush of settlers the moment a change in the finances of the Act was announced; to cut out the loss on flotation stock ought to be issued at a rate of interest that would secure a par price, and at 2¾ per cent., this had not been secured; if the stock were issued as Land Stock even 3 per cent. would not go at par, and to secure par price the stock would have to be issued in such a way that financiers could not set upon it as bog stock; it might, however, not be possible to disguise the stock, 51956.—It would be possible to do so if the stock were floated as Consols, but the objection to that was that the effect on Consols would be instantaneous, 51957.—The changes suggested would involve a corresponding alteration in Section 45 and other sections of the Act; by that section the purchasing tenant was charged for the use of the money at cost price; the stock was raised at 2¾ per cent., and the tenant was charged 2¾ per cent., plus 10*s.* per £100 for sinking fund, making a total of 3¼ per cent.; there would be no use in cutting out the loss of capital unless the rate charged to the tenant were altered in the same proportion, because the loss of capital was no worse than the corresponding loss of interest; the rate of the purchasing tenants' annuities would therefore have to be made 3½ per cent. instead of 3¼; the effect of this would be that the tenants having been taught, under the Wyndham Act, to buy by percentage reduction would stipulate for the 20 per cent. reduction, and would not think of the extended period of repayment; witness spoke for the part of the country he knew best; the 20 per cent. was the difference between the amount of the annual instalment and the previous rent; with the increased rate of repayment annuity the same reduction could only be secured by purchasing at a lesser number of years' purchase; the effect of this was simply to get back to the old method of purchase, 51958, 51964.—The system of percentage reductions under the Wyndham Act was introduced by advice of the Land Conference, of whose responsibility witness took his share; the Land Conference did things they were not certain about, and in fact things that they were quite sure would result the other way, and this system of percentage reduction was one of those things; in the old days, according to the custom of the country, the universal method of buying land was by number of years' purchase and not by reduction in annual payment, 51959-63, 51964-6, 52003-5.—Under the system of purchase by percentage of reduction the tenants got the reduction and continued paying the instalment for seventy years, and posterity had to deal with the matter, which might be a bad thing for posterity; to meet the deadlock the annuity on the tenant must be raised, and if this were done the tenant would return to the old method of calculating by number of years' purchase, and would see that under the new system he paid no more than before; at present he was paying as much in his instalment and more in his price; the scheme under Mr. Wyndham's Act, which reduced the element for sinking fund by a corresponding extension of the period during which instalments were to be paid, was of no use to the tenants, and the whole value of it was at once added on to the purchase-money of the landlord; the tenants, in 1885, got their 20 per cent. reduction under the Ashbourne Act, buying at 20 years' purchase; now, under the Wyndham Act, the tenants were buying at 25 years' purchase, and getting no more than the same reduction, and paying for seventy years instead of forty-nine; the matter was so imperative, the loss being so enormous, and the probable result so disastrous, that there could be no difficulty in defending a change that would cut out the loss to the taxpayer and let the Act work freely, 51967.

ROYAL COMMISSION ON CONGESTION IN IRELAND.

MINUTES OF EVIDENCE.

NINETY-FOURTH PUBLIC SITTING.

WEDNESDAY, AUGUST 21ST, 1907,

AT 11.0 O'CLOCK, A.M.,

At the Schoolhouse, Crossmolina, County Mayo.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (Chairman); The Right Hon. Sir JOHN COLOMB, K.C.M.G.; The Right Hon. Sir FRANCIS MOWATT, G.C.B.; Most Rev. Dr. O'DONNELL; CONOR O'KELLY, Esq., M.P.; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Mr. JOHN M'NULTY examined.

46738. CHAIRMAN.—You represent the County Council, I think?—Yes; and the evidence I propose to give will be in connection with the small tenant-farmers, first under £5 valuation, and then between £5 and £15 valuation. I will take the Castlebar Union first, as it is in the Castlebar Union I live, and I am more acquainted with it.

46739. You represent Castlerea on the County Council?—Yes; I represent the Castlerea division on the County Council. A portion of it is in Ballina Union and a portion in the Castlebar Union.

46740. Sir JOHN COLOMB.—Can you give us the electoral division?—Yes, sir; the electoral division is Balla, in the Castlebar Union. The area is 8,936 acres, and out of those 8,936 acres more than half is grazing land, namely, 4,522 acres, 3 roods, 33 perches. There are 201 tenant occupiers under £5 valuation. I consider that owing to the fact that they are living on uneconomic holdings either those men or their sons are compelled to go to England or to Scotland every year in order to provide the necessaries of life, while forty graziers in that division occupy 4,522 acres 3 roods 33 perches.

46741. How many of them are there?—Thirty-seven. I consider, of course, that that is unjust.

46742. Where are those men?—In the division of Balla, near Castlebar.

46743. Most Rev. Dr. O'DONNELL.—In what rural district is it?—In the rural district of Balla, and it is in Castlebar Union.

46744. CHAIRMAN.—Now, they have 4,000 acres?—Yes; 4,522.

46745. Is that land all good enough for agricultural purposes—for grazing or tilling; is there none of it waste land?—It is some of the best land in the county for tillage.

46746. Is any of it waste land or mountainous?—Well, not much mountain land in the division of Balla. In fact the valuation is high.

46747. Do you wish the Commission to understand that none of this 4,500 acres is mountain land?—Not much of it. I want them to understand that. There is not much mountainous land in the division of Balla.

46748. You say not much, but can you tell us how much of it?—No; I cannot, exactly.

46749. You cannot tell us in detail about that 4,500 acres how much of it is under grass, how much of it is bog, and how much of it is rough grazing?—The largest portion of it is under grazing.

46750. But you cannot tell us any details?—No, not any details.

46751. Can you tell us who it belongs to?—I cannot tell you what landlord it belongs to.

46752. You do not know the landlord?—Oh, there are a number of landlords.

46753. Can you tell us anybody?—Well, Captain Lynch Blosse or Mr. Lynch Blosse owns portion of it.

46754. Most Rev. Dr. O'DONNELL.—And did you say that the bulk of it was under grazing?—Oh, it is under grazing. The best portion of it is.

46755. Would it be good for tillage land?—It is some of the best land in the County Mayo.

46756. Sir JOHN COLOMB.—Has it limestone?—Yes. There is a good deal of limestone in it.

46757. Clay?—Clay and limestone.

46758. Is it sticky land?—It is sticky, but good. A part of it is sticky; and there is some moorland also.

46759. CHAIRMAN.—Proceed, please?—The next division is Ballinafad. The area is 5,412 acres, and out of that there is 3,420 acres, 3 roods, 27 perches under grazing, uncultivated.

46760. In what electoral division is this land situated?—In the electoral division of Ballinafad.

46761. The lands you were telling us about before were the lands of Balla?—The lands of Balla.

46762. I see in the return before me that there is in a townland in the electoral division of Balla land belonging to Sir Henry L. Blosse, 117 acres, 3 roods, 2 perches, with a rateable valuation of £1 12*s*. That cannot be worth very much?—No; that, of course, is not worth very much.

46763. Then, in the townland of Ballinagran, 29 acres, valuation £7. But go on?—The division of Ballinafad has an area of 5,412 acres. Out of that there are 3,420 acres, 3 roods, 27 perches.

46764. All untenanted land?—Well, I consider it is, over £15 valuation. Some of that is £15 valuation, tenanted land, but there is a large number of those holdings untenanted land.

46765. Most Rev. Dr. O'DONNELL.—When you speak of the £15 valuation, on what area do you put the £15?—Well, according to the condition of the holding; the area is large in some cases and small in others. Where the land is valued at £1 an acre, that would be, of course, put on £15 acres. There is land of the annual value of about 5*s*. an acre, or 2*s*. 6*d*.

46766. When you speak of grazing land in the Ballinafad division, was any of the land formerly under cultivation?—Yes; a good part of it. A good deal of it was evicted then, and people left it in olden times of their own accord. Most of it is evicted land.

46767. CHAIRMAN.—Go on, please?—Then, again, there is Croaghmoyle. The area would be 7,150 acres in Croaghmoyle, and out of that there is only 654 acres, 2 roods, 1 perch.

Aug 21, 1907.
Mr. John M'Nulty.

46768. Mr. O'KELLY.—Is that an electoral division?—Yes.

46769. CHAIRMAN.—An electoral division?—Yes; an electoral division in the Castlebar Union.

46770. Is there any other name for it?—It is in the parish of Islandeady.

46771. CHAIRMAN.—Yes?—In that division there are only four occupiers over £15 valuation, in Croaghmoyle. It is almost all a congested area; a very poor division.

46772. How many are above £15 valuation?—Only four occupiers above £15 valuation.

46773. And what is their valuation?—£131 10*s*. And there are nearly forty-one under £15.

46774. And of these four occupiers, their valuation is £130?—£131 10*s*. is the valuation.

46776. There are four holdings over £15?—Yes.

46777. And these come to a valuation of £132?—A valuation of £131 10*s*.

46778. And what is the valuation of the rest of them?—The valuation of the whole division of Croaghmoyle is £682 18*s*.

46779. Most Rev. Dr. O'DONNELL.—That leaves a balance of £551 8*s*.?—Yes.

46780. And those small holders, how do they get on; do they migrate for a living to England?—They migrate each year to England, and their condition in England is a very poor one, owing to the fact that they have to sleep in outside buildings, sometimes in stables.

46781. Have you been there?—Yes; I have seen it.

46782. In what part?—Yorkshire.

46783. What part of Yorkshire?—Sheffield.

46784. Whose property, on what farm?—Near Chapeltown.

46785. Are they better paid there than when they are at home?—They are better paid.

46786. They can buy the necessaries of life?—Well, according as they choose themselves they can have whatever necessaries of life they wish, of course.

46787. Sir FRANCIS MOWATT.—During what months are they passing—when do they go to England and when do they come back?—The majority of them go off in the month of June, and a large number in spring, immediately after they till their land in spring. They are compelled to go.

46788. How many months are they away from Ireland?—As a rule the majority of them remain four or five months. And unfortunately I must say that females are compelled to go to England also out of this county.

46789. Most Rev. Dr. O'DONNELL.—Would the grass land to which you have referred be conveniently situated for the enlargement of some of those small holdings?—Oh, by all means.

46790. Does it lie on the borders of some of them?—Yes, one district lies convenient to this division of Croaghmoyle, and there are a number of the largest grazing ranches in the rural district that would relieve a good deal and put a stop to emigration to England.

46791. Sir JOHN COLOMB.—When you were being examined by the Chairman you used the phrase "waste land." What do you call waste land?—Untenanted land. I call that waste land; where it is held by graziers and large men.

46792. Well, I will put my question in another way. What you mean by untenanted land is land not held by tenants under the Act of 1881?—Yes, but held formerly by tenants, and a good deal of it evicted by the landlords, and of course in former times the people had to emigrate themselves.

46793. I only wanted to get at what we were to understand by your use of the words "waste lands." I understand you to call grazing land waste land?—Yes, I do, of course, because it does not relieve congestion in any way. It is occupied only by bullocks instead of by people.

46794. You call it waste land?—So far as not making it a living for the people is concerned, but only to feed bullocks.

46795. Now, with regard to those small holders that we are all anxious to improve the position of, and no doubt you are, the men with those small uneconomic holdings as you call them, will you tell me this. How long can they keep their young stock—at what age have they to part with them?—They have to part with them at different ages; at four months, and at six months, and at twelve months.

46796. You understand my question. I am referring to the men you describe as having uneconomic holdings, and I ask you what is the extreme limit of age to which they are able to keep the stock they breed?—I should say the extreme limit of age is twelve months in the case of the majority of the men with uneconomic holdings.

46797. They are compelled to part with them by the contingencies of their circumstances?—Yes, sir, undoubtedly.

46798. Now who buys them?—Well, of course, different classes of men buy them in fairs and markets.

46799. Do the graziers buy them?—Some of them, perhaps, and some on the tenanted lands.

46800. But the men with what you call the waste land buy more of the young stock than is bought by the tenants?—Some of them.

46801. And what would happen, do you think, from your knowledge of those districts, to the small men if they were deprived of their market for their young stock?—If the holdings were enlarged it would not be any drawback on the sale of the stock in any way, in my opinion.

46802. Have you thoroughly considered that question yourself from the point of view of the interests of the small holders?—Yes, sir; that the enlargement of the holdings would not in any way interfere with the sale of the stock, but, on the contrary, I think it would encourage it.

46803. It is not a question merely of enlargement of the holdings on which we are all agreed; but supposing the waste lands were taken up and the small holdings enlarged for the relief of the congested population, would you say that if any balance remained it ought to be given to the congested people in Galway or elsewhere?—Yes.

46804. And that would abolish the grazing. Now, I ask you have you considered what would be the effect on the economic position of the small holders who cannot keep their stock beyond twelve months if there were no grazing?—I think in my humble judgment that the enlarging of the holdings would not at all prevent the sale of stock in any way, and that it would go on just as well as in fairs and markets at present, and perhaps better.

46805. Even although under the enlargement of the holdings the grazing land disappeared?—Yes; even though the grazing land disappeared, that is, those large ranches. There would be a limit, of course. What I consider a rancher is a man holding over £50 or £60 worth of land and having no cultivation on that; but a man holding £50 or £60 worth of land and having tillage on that, I would not call a rancher.

46806. A man having land of £50 or £60 valuation?—Yes, sir.

46807. And having grazing land?—No, but having tillage. I would not consider that untenanted land. I would not consider him a grazier either.

46808. Then you have got some standard of value in your own mind for the purpose of determining what is to be done?—Yes; what I consider to be fair.

46809. And you would not allow of any man holding land over a certain value?—Oh, no; I would not be for going too close to the figure of course, but something near that.

46810. CHAIRMAN.—Is there any other point you want to tell us about. I just want to draw your attention to this, that we want to hear to-day a good deal on the Ballina side. We are now on the Castlebar side?—Well, it is something similar. Of course there are other divisions in the Castlebar Union and they are much the same as I have described. There are some divisions, of course, where there are a large number of uneconomic holdings, and in other divisions there are not many, and of course where there is a large number of uneconomic holdings there is a great deal of poverty.

46811. Yes, we have got all the figures?—Well, of course, as far as Ballina Union is concerned there is a number of grazing ranches in it, and a large number of uneconomic holdings also. I see that by the returns of the Ballina Union the Earl of Arran has a valuation of £781.

46812. Sir JOHN COLOMB.—Does that include demesne?—Yes, sir.

46813. CHAIRMAN.—Anything else?—There is a large number of uneconomic holdings valued at £4—2,242.

46814. Where is this?—Ballina Union.

46815. Sir JOHN COLOMB.—What number do you say?—2,242 holdings.

46816. Do you mean in Ballina Union?—In Ballina Union, at about £4.

46817. According to the figures before me there are only 1,362?—From £4 to £8 there are 1,593.

46818. Where do you get the £8 from, because it is not a standard?—Well, it is not a standard, of course, but it shows actually the condition.

46819. CHAIRMAN.—Is there anything else you want to say?—Well, not much of importance.

46820. There is one question I want to ask you before you leave the chair, and it is this. You advocate, do you not, the acquisition of those grass lands?—Oh, by all means.

46821. That is what you would like to see done?—Oh, yes; that is what I would like to see done, so as to have the small holdings enlarged.

46822. Supposing that what you desire to be done was done and that those grass lands were acquired, tell me exactly who are the people you would put upon them?—Well, I would say the middle-aged men.

46823. But what are the men doing now whom you would like to put upon them—would they be farmers themselves?—Small farmers, of course, the majority of them in this county.

46824. In your view those lands should be used for new holdings for small farmers?—Yes.

46826. Is it only to the small farmers you would give those lands?—Only to the small farmers.

46827. Supposing the farmers' sons wanted some of the land?—Well, I would say the farmer or his son, if he had a son of 20 or 21 years of age. Rather than emigrate it would be much better to increase the population of our country in that way.

46828. Do you imagine that there is enough land to satisfy the claims of both classes—of small uneconomic farmers and of sons too?—Well, I could not say that there is a sufficient quantity of land for all.

46829. And if there is not a sufficient quantity of land for all what are you going to do?—Well, of course, all the land that could be possibly acquired I would put the people on, and of course if there was not a sufficient quantity of land the people should emigrate. But it would be a great help to keep some of the people at home, by all means, to enlarge the holdings.

46830. But would you suggest that any steps should be taken to put the sons of farmers upon that land till the uneconomic holders themselves have been satisfied?—Well, I would suggest that there should be compulsory powers.

46831. Never mind how you acquire the land. Suppose you have got the land, and having got it you have to decide whom you are going to put upon it. There are two classes who want it. There are the same people that you have been just telling us about, and there are also the sons of farmers who have got no land at all at present. Which of those two people are you going to satisfy?—Well, those of course that have not got any land. I would be in favour of keeping them at home, if possible. And then, secondly, if there is a sufficient amount of land to be obtained I would be in favour of putting the other class on.

46832. But suppose for a moment that there is not enough land—and I think you may take it from me that there is not enough land for both those people—are you disposed to say that the small holders should be first considered?—Yes, by all means.

46833. The uneconomic people should be first considered?—Yes.

46834. And those are the people you wish principally to benefit?—Yes, in the first place, and secondly, the young men by all means to be kept at home if the land could be acquired and it was sufficient, so that the eldest son might remain at home.

46834A. Sir JOHN COLOMB.—First of all you would deal with the small uneconomic holders?—Yes.

46835. And then if land remained you would give it to the sons of farmers?—By all means.

46836. But would you confine the occupation of the land to people of this district. Supposing that you had provided for the uneconomic holders of this district out of those lands and there still remained land, do you think that people from South Mayo, congests, ought to come here or that the farmers' sons here ought to have the preference?—I think that the local men ought to have the preference in the first place, and then if there was land remaining that the neighbouring division of the county ought to be given the preference before going into another province.

46837. Then any balance of the land after providing for the enlargement of the uneconomic holdings in this part of Mayo you think ought to be then distributed, as far as that remained, to the farmers' sons in this district?—Yes.

46838. And would you object to congestion in South Mayo being relieved by applying that land towards relieving it by bringing congests from South Mayo here?—Oh, we would not object at all if the land was available.

46839. Which would you give the preference to?—To the local men.

46840. Therefore you would bar out the South Mayo uneconomic holder from coming here, do you say?—I would, of course, while there would be men left with uneconomic holdings here.

46841. CHAIRMAN.—Suppose you acquired a certain amount of untenanted grass land here in this district and you then proceed to put people upon them, would you first consider the uneconomic holder from this district?—Yes.

46842. And if you have satisfied them, and there remains a balance of the land over, are you going to bring in a similar class of people, congested people, with small uneconomic holdings, from South Mayo or Donegal, and give them that balance, or are you going to give it to the sons of people in this district?—Well, I would consider the uneconomic holders in the other district.

46843. In your opinion, therefore, the sons of tenants must not be considered till the uneconomic holders, no matter where they live, have been satisfied?—Yes; I am in favour of it.

46844. Mr. O'KELLY.—What is the reception those people would be likely to get when they came into North Mayo, say?—Oh, they would get a warm reception. I do not think there would be any feeling. I will not pursue it further, as you have given me a capital answer.

46846. Mr. SUTHERLAND.—But you are very far from that stage yet?—Oh, I do not think so, if the question was handled properly.

46847. Before any difficulty like the allocation of the land arose, you would be first of all in favour of getting the land?—Oh, yes. It will never be got unless compulsory powers are given to the Estates Commissioners.

46848. But the difficulty raised here you think is rather a remote difficulty?—Well, I do not think so.

46849. That this difficulty arises at once?—I do not think so. There is a move to be made. Unless a move is made to remedy these things they never will be remedied.

Mr. MATTHEW J. MELVIN examined.

46850. CHAIRMAN.—You represent on the County Council the rural district of Ballina?—Yes.

46851. Tell us what you have to say?—There is in the union a population of 20,148 at present.

46852. Do not give us more figures than you can help because we have got them all?—The area is 496 acres, 2 roods, 1 perch, and there are 2,242 holdings valued at £4 or under, in the union. From £4 to £8 there are 1,593 holdings. From £8 to £15 there are 715. From £15 to £20 there are 219 holdings; and over £20 there are 332. The total valuation of the union, exclusive of fisheries, is £45,000, which is including the urban area of Ballina. Twenty-five landlords in the union are in possession of land mainly used for grazing purposes, to the value of £5,693.

46853. Sir JOHN COLOMB.—Does that include demesne?—That includes demesne. And sixty-four graziers to the amount of 3,816.

Aug. 21, 1907.

Mr. Matthew J. Melvin.

46854. CHAIRMAN.—Valuation or acreage?—Well, I cannot exactly give it.

46855. Do those figures overlap at all—you say these landlords hold so much land?—Demesne land and grazing land.

46856. Do any of the graziers you speak of farm the lands which you say are in the possession of the landlords?—They do. They are working on the eleven months' system, most of them.

46857. So that portion of those figures are counted twice over?—The graziers are included in the sixty-four, entirely exclusive of the landlords.

46858. And the five thousand and the three thousand then are irrespective of each other?—They are separate altogether. There are ten electoral divisions in the union scheduled as congested, but the Congested Districts Board have done practically nothing in this union. We never had a member of the Congested Districts Board in this union, to my knowledge.

46859. Sir JOHN COLOMB.—Are there no Parish Committees?—There are some Parish Committees in two parishes, and there may be a Parish Committee in Crossmolina, but I am not aware. Monsignor O'Hara will deal with that question. The population of the union has fallen from 24,960 in 1881 to 20,148 in 1901, showing the very large decrease of 4,812 in twenty years. The only remedy, I believe, for this is the dividing of the grazing ranches and the enlargement of holdings.

46860. Mr. O'KELLY.—That is the diminution of the population in twenty years?—Yes, in twenty years, since 1881.

46861. CHAIRMAN.—And with regard to the use you would make of this land would you agree with the last witness's evidence?—Not entirely with every word of his evidence, but I did not hear the whole of it.

46862. Where do you disagree with him—is it with regard to the distribution of the grass lands?—I do not disagree with him with regard to the use of the grass lands in the least.

46863. You would not consider the sons of the tenants till the congested people had been satisfied?—In my humble opinion I think there will be remedies.

46864. Answer my question, please. You would not consider the sons of tenants till the other people had been satisfied?—I do not think it would be wise to leave portion of the community in congested districts in poverty. I do not think it would be wise or prudent to create new tenants without first supplying those who are in the congested area.

46865. You would not create any new tenancy except where the creation of the new tenancy vacated land which could be used for enlarging holdings?—Yes.

46866. In other words you would not increase congestion?—No. That would be only making three poor in place of one.

46867. And would you be prepared to use your influence towards a distribution of that kind?—Yes, I believe it is absolutely necessary.

46868. Sir JOHN COLOMB.—But would you resist the policy of giving new holdings on those grass lands to farmers' sons?—No; I would not. By no means, if the holdings of the surrounding tenants living on uneconomic holdings were first made economic.

46869. CHAIRMAN.—Would you give a preference?—I would give a preference to the sons of tenants.

46870. How about uneconomic people in other parts of the country who have no grass land near them?—They ought to be migrated.

46871. Then, would you think of migrating them before the farmers' sons?—Yes, of migrating them.

46872. Sir JOHN COLOMB.—In this district, in Mayo?—In this district—Mayo.

46873. You would bring in men from Galway?—No. I will take, for example, two districts of Ballina Union. There are 1,400 labourers living in two parishes of this union, who annually go to England—I mean the parishes of Attymas and Kilgarvan, in addition to another, Faugheen, in the Ballina Union. Those men are all living in uneconomic holdings. There is a very small amount of grazing ranches except four or five hundred acres in those congested parishes. Those men were born to poverty. Poverty is their doom, and all that they will ever transmit to their posterity is hard toil and scanty remuneration.

46874. CHAIRMAN.—To give you a concrete case, Leitrim has a great many poor congested holdings such as you have got here, and very little grass land. You have told us that the breaking up of grass lands and the creation of new tenancies are the only remedies for congestion?—Certainly.

46875. If that is so how do you suggest that the poor people in Leitrim can be benefited unless they are brought?—I am not speaking of Leitrim. I am only speaking of Mayo.

46876. But you have to look at this question as a whole. You cannot look at it as a county question?—Send them up to the big grazing ranches of Roscommon.

46877. Supposing the Roscommon people say the same thing as the Mayo people?—As far as I am concerned, when you make uneconomic holdings economic I do not care where you bring them as long as you bring them into it.

46878. But that is a contradiction, because just now, in answer to Sir John Colomb, you seemed horrified at the suggestion that people from Galway should be brought down and put upon grass lands in Mayo?—Not if the people of Mayo were first supplied.

46879. The uneconomic people in Mayo?—Yes, and the sons of tenant farmers.

46880. That is it. Are you prepared to say that the sons of Mayo tenants should be given land before you could bring in an uneconomic holder from Leitrim or Galway?—Well, jealousy would naturally exist over it.

46881. But the two things are perfectly antagonistic. You, in Mayo, are perhaps fortunate because you have got uneconomic holdings, poor holdings?—Fortunate!

46882. Much more fortunate than some people, because although you have got poor holdings you have at the same time got tracts of grass land in the same county, in the vicinity, but in other counties where there is also poverty they have not got the grass lands which you have. If the State is going to carry out a general policy in order to relieve the poverty of those districts you have to bring the people into another county where there is grass land, which does not exist in their own county, and if in Mayo and any other place you are going to say that the sons of tenants have got to be given land before any migrants can be brought from another county you are practically taking up a line which I do not mind saying is a selfish line, and which absolutely prevents any idea of migration being carried out?—I would not go so far.

46883. Then, tell us where you would draw the line?—After the uneconomic holdings in the district would be satisfied, of course, there must be something done for men living in other places on uneconomic holdings. I would migrate them.

46884. Where would you put them?—I would migrate them into this or any other county.

46885. Would you be prepared as a man of influence and position in the place to welcome those men?—Certainly.

46886. And to resist the claim of a son of a tenant to be given a holding if you were satisfied that these men were uneconomic small holders in another county who had to move if ever anything was to be done for their position?—Well, that is a very crotchety question. A jealousy would exist, no doubt.

46887. Do you say that those people would receive as the last witness told us, a warm welcome?—Well I would not go as far as the last witness, but we are all Irishmen.

46888. Do you say a cold welcome?—A welcome, do not say cold or warm; but jealousy would exist among them for a time.

46889. Sir JOHN COLOMB.—You would not say that it would be a warm welcome or a cold welcome, but would there be a welcome at all?—A jealousy might exist for a time, but it would wear away. That broad question has to be approached.

46890. Most Rev. Dr. O'DONNELL.—It ought to be approached in a broad way?—Yes.

46891. And would you not think that a public authority would also be required to make a correct arrangement?—I believe so.

46892. Do you not think that a problem of the bulk is comparatively simple in Mayo; for have you not in Mayo a greater number of uneconomic holders than in any other Irish county?—Yes.

46893. Is it not very likely that any grass land available in Mayo would be more than required for the enlargement of the uneconomic holdings in the county itself?—I believe so.

46894. So that practically this difficulty does not

rise so much in reference to people from other counties?—No.

46895. The case does not arise in practice so much in the County Mayo?—No, not in the County Mayo.

46896. The amount of grass land even if all were made available in Mayo is not enough to go round the uneconomic holders in the county itself?—No.

46897. Now, do you not think that in every locality in Ireland there is naturally a prepossession in favour of the people of the district itself?—Certainly; it is quite natural.

46898. Then, you require to argue with people before they come round to the view that congests from a distance should be considered before the sons of tenants?—Yes.

46899. But would not men of influence like yourself be able to use that influence to impress on the people that nothing could be done for the country unless uneconomic holdings were first enlarged?—I believe so.

46900. But suppose the uneconomic holdings in the district were first enlarged, and the uneconomic holdings in the county were being enlarged generally, the question would arise then with regard to the sons of tenants?—Yes.

46901. You hold strongly that the existing uneconomic holding should come first?—Yes, first; I hold that.

46902. And the sons of tenants have then to be considered?—Yes.

46903. But, apart from Mayo, you have also to consider in this question which was put to you by our Chairman and Sir John Colomb, that in a county like Leitrim they have no land, or very little land, for enlarging uneconomic holdings?—I believe so.

46904. Do you not think that for the solution of this question public authority will be required, and that after providing in any county for the uneconomic holdings of that county, the public authority should be able not only to deal with the sons of tenants, but also to provide for congests from a different county?—I agree with that thoroughly.

46905. You think so?—That is my opinion.

46906. And you would not say there is any mathematical order in which sons of tenants from the county and congests from a different county are to be treated?—Yes.

46907. Sir John Colomb.—Am I to understand that you convey to his lordship the bishop this, that the sons of tenants are to be absolutely ruled out of the account till congestion is relieved everywhere, that the giving of plots of grass land to the sons of tenants in a county is not to be considered till the whole question of congestion in other counties is satisfied?—I consider that would be a question for the State to deal with.

46908. But have you any opinion?—I would have no opinion on it because it is very crotchety.

46909. What is your standard of an economic holding?—That varies according to the particular locality in which the holding is situated. A holding of ten or twelve acres could be economic near Dublin or Belfast, whilst in Mayo it would not be economic at all. It is according to the quality of the land on the one side and the nearness of markets on the other.

46910. What have you in your mind?—I believe between twenty and thirty acres of fair land is an economic holding. If the land is good, that amount would be economic, but I believe less than twenty acres or something thereabouts would not be economic.

46911. Do you consider any holding really economic that cannot be worked with a horse?—It is not economic if it cannot be worked with a horse.

46912. That is your opinion?—That has been my opinion for years past.

46913. Most Rev. Dr. O'Donnell.—I should like to bring you back to that question of the distribution of grass lands?—Yes.

46914. Take a county like Mayo?—Yes.

46915. And take a district in Mayo where there is grass land for the enlargement of holdings and for the purpose of migration. I suppose, Mr. Melvin, there is a good deal of feeling in one part of a county like this against taking people from another side of the county?—Well, there has been very little in this district. Practically speaking, we know nothing about it in this union, but such a thing prevails.

46916. There would not be much more objection to taking in migrants from a different county than to taking them from a remote part of the same county?—No. If we take men from Ballinrobe, or out of Sligo, what is the difference?

46916a. That is what I want to come to?—There is not the least difference.

46917. There is not much difference between bringing men from a remote part of Mayo and bringing them from a different county?—Not the least.

46918. Suppose the problem is being actually worked out in this locality, you consider that the poor men in this district, to which you call the attention of the Commission, should first of all have their holdings enlarged?—Yes.

46919. Then the authority enlarging these holdings is not able to proceed by any mathematical rule, but that should be the first portion of its work, the enlarging of the uneconomic holdings of the people who are not far away?—Yes.

46920. What is the next stage? You have told us in Mayo there is not enough land to go round all its own congests?—No.

46921. All the same, if the public authority in enlarging the uneconomic holdings of men in Mayo would find it very convenient not to mind that aspect of the case, but when it has enlarged the uneconomic holdings here to let in a few people from Sligo or Leitrim of the same class of tenants, would there be any objection to that?—No, not the least objection.

46922. I want to ask you this. In the county of Mayo there is not enough land for all the congests of Mayo?—There is not.

46923. Suppose the public authority in working out this scheme found that it was convenient, instead of going to remote parts of Mayo to get congests, rather to take them from the neighbouring counties, the people would consider the difficulty of the case and would not object to that?—They would not object to it in the least. That is my opinion of it.

46924. Mr. O'Kelly.—There have been cases in Mayo of migration?—Yes.

46925. From one part to another?—Yes.

46926. For instance, take the Lacken side?—Yes.

46927. In those cases it does not appear that ill-feeling was shown to the newcomers?—Not in the least.

46928. And after a little while they got on the best of terms?—Yes. In one electoral division alone, rated annually at £1,200, we had to give for outdoor relief in one year £115 8*s.* 1*d.*

46929. Sir Francis Mowatt.—What year?—1905-1906, the first half-year ending 30th September, 1905, £65 10*s.* 4*d.*, and the next half-year ending 31st March, 1906, £49 17*s.* 9*d.*, making a total of £115 8*s.* 1*d.* That was in a division on the slopes of Nephin Mountain rated annually at £1,200.

46930. Chairman.—Was that an exceptional time?—No, not the least exceptional. That occurs to-day. If we went over it this present year it would be the same thing.

46931. Was not that £115 8*s.* 1*d.* under the three-penny rate that you were allowed to raise?—No; it was raised on the union at large.

46932. Yes, but was not 1905-1906 the winter in which, owing to the failure or partial failure of the potato crops, there was a special arrangement made for Mayo?—There was no special arrangement for this union. The thirteenth section was not put in force in this union, and I have been a member of the County Council and District Council and Board of Guardians for the last seven years. This was 1905-1906.

46933. Do you remember that special arrangement?—I do. The thirteenth section was put in force in three unions of the county, Belmullet, Swinford, and Westport.

46934. And under that section you were allowed to levy a three-penny rate?—Yes, a degrading section. It is feeding the dog with a joint of his own tail.

46935. But it is a three-penny rate?—It is, my lord.

46936. And is not the Government contribution 75 per cent.?—Yes, 75 per cent.; but the cost was about £1,700 over the county.

46937. Sir John Colomb.—You gave these figures on an area with a value of £1,200?—Yes.

46938. You give this as a matter of general illustration, and in one year, 1905-1906, you say £115 8*s.* 1*d.* was distributed?—Yes, £115 8*s.* 1*d.*

43939. Now, I want to ask you this question. Was that distribution of relief to holders of land?—To

Aug. 21, 1907.

Mr. Matthew J Melvin.

holders of land mostly. It was what we call provisional relief.

46940. And what was the amount of the valuation of a holding to which that relief applied?—There was no limit.

46941. And could you give it to men of £15 valuation?—There were not two £15 men in the division, but men of £2 and £3. They are extremely poor.

46942. In that particular division that you have referred to is the migration greater than in others?—It is equal.

46943. Is it greater?—Oh, no, it is about the same. It is as great, and in addition to that, I can give you other examples. The same thing prevails in the divisions of Attymas West and Attymas East, and Kilgarvan, and Sallymount divisions.

46944. And although that is an exceptionally poor and poverty-stricken division, the migration of young men and women to England is not greater than in other divisions?—They are nearly equal, these two parishes of Attymas and Kilgarvan, and portion of Fraughleen. They are nearly the one way. Fifteen hundred labourers go annually to England. And, as a proof of it, we have had to appoint three rate-collectors since the passing of the Local Government Act. It is impossible to collect money in those divisions. They have no money to give. And on the 30th of September the rate-collector is bound to close his accounts, and three rate-collectors are broken up with that within the last few years.

46945. Most Rev. Dr. O'Donnell.—Is there any emigration to America from this district?—There is. And usually they are unable to pay their rents or rates till they get money from America, in addition to the money that they earn in the harvest fields in England and Scotland, where they have to sleep, unfortunately, in barns and on sacks. I believe that compulsory powers are absolutely necessary to purchase up those great ranches. I have been in other countries, and I find that in other countries things are managed better.

46946. Chairman.—How do you know that compulsory powers of purchase are necessary?—Because I believe the landlords will not sell till they are compelled.

46947. I suppose you have had nothing yourself practically to do with any negotiations?—Not strictly.

46948. So that when you say that it is rather hearsay, is not it?—No, from experience. They want twenty-six years' purchase, and nine years ago they were selling at eighteen or nineteen years' purchase to my knowledge. And I know of a landlord not nine miles from where I am sitting that wanted twenty-six this year, who was willing to take eighteen before the Act of 1903.

46949. Have you had any negotiations about the buying of grass land?—No.

46950. And it is hearsay when you say that compulsory powers are needed for the purchase of grass land?—I believe it is not hearsay. It is a patent fact to the public. You might as well reason with a tiger as reason with a landlord about the purchase of grazing ranches.

46951. But what you heard is hearsay?—It is not hearsay, it is experience. There were 111 Irish acres of land given up a couple of years ago, and this land the surrounding tenants wanted to get to enlarge their holdings, and the landlord refused point blank, and did not give it to them, and took another mode of doing it. They went and got an auctioneer, and they brought up a surveyor and divided it into ten acres, and fifteen acres, and five acres and eight acres

46952. Mr. O'Kelly.—What is the name of that farm?—Cranagh. It is well known. There are policemen minding it now. The surrounding tenants wished to get this land to enlarge their little holdings of £5, and £6, and £7, and £4 10*s.* valuation. The landlord made up his mind that he would do it better. He got a surveyor and divided it up in holdings, and he handed it over to an auctioneer to sell the chattel interest, to sell tenancies that did not exist, that he created himself, to set up ten acres of land and say, "I will give you the tenancy of it. How much for it?"

46953. Chairman.—You call that a chattel interest?—We call the tenant's interest the chattel interest, but this was a grazing ranch sub-divided into ten, and twelve, and fifteen, and twenty acres. They sub-divided it, and put it up for auction. Public opinion became indignant at this, but it seems it was sold privately to different parties at something about ten or twelve years purchase money on the rent.

46954. Sir John Colomb.—Do you know this of your own knowledge?—Of my own knowledge.

46955. You have knowledge of what you describe as a private bargain?—I have knowledge from the parties who signed the agreement and then paid an instalment on the amount of the fine.

46956. Chairman.—Ten or twelve years' purchase for the tenant right, if it is good grass land, was not very high, was it?—That is £1 8*s.* an acre and taxes.

46957. He would be able to sell for twenty-three?—And the bonus would make it thirty-five. That is the way I look at it.

46958. But tenant-right when a tenant offers to sell it usually fetches more than ten or twelve?—It does, and that is why these farms exist. And it is all a huge ranch.

46959. That was good land?—It was average land.

46960. But whether this transaction was or was not justified ten or twelve years' purchase of tenant-right was not very high?—No. I would not consider the chattel interest of a holding with farm buildings on it very high at that.

46961. Sir John Colomb.—The money paid, which you estimate as ten or twelve years' purchase, was that in the way of a fine?—Of a fine.

46962. And the land was subject to a rent of how much?—A rent of £1 2*s.*

46963. And does not all you have stated show how extremely valuable that land was to the landlord?—And the extreme value which he wanted to make out of it.

46964. But he went into the market?—But that is what we object to. I object to his putting up grazing land for auction. Then the Act of 1903 would be frustrated. The man who wished to get the land to enlarge his holding would not give ten or twelve years' purchase for it, but the man with money would give it and the intentions of the legislature would be frustrated if this thing was allowed to go on.

46965. Chairman.—You told us this story in connection with your remark that compulsory powers were necessary?—Yes.

46966. Now, what reason have you for thinking that supposing some public authority, the Estates Commissioners or Congested Districts Board, had approached that landlord with a view to buying his land for distribution among those people that you say ought to have bought it, he would not be willing to sell to the public authority?—Public report had it that he refused to sell to the Estates Commissioners, and the tenants were willing to give anything that the Estates Commissioners or Congested Districts Board were willing to give for it—perfectly willing.

46967. Was there in this case that you speak of ever any negotiation between the Estates Commissioners or the Congested Districts Board and the landlord for the purchase of this land?—I am not aware of it.

46968. Mr. O'Kelly.—In reply to a question in Parliament did not the Chief Secretary say that there were negotiations for the purchase of this property?—Yes, I have seen that in print.

46969. Several months ago?—Yes.

That was the answer given to a question I put myself.

46971. Chairman.—Then would you not be inclined to say that you cannot judge how far compulsory powers are needed till you see the result of negotiations between the public authority and the landlords?—I think the Governments existing in every country are for the good of the governed, and I think it is just as fair for the Government to say "So much is the price of this estate" as it is for it to say "So much is the rent for fifteen years, and no more." It says on the one hand, "So much is the rent for fifteen years and no more," and I think the Government, which is supposed to be a silent partner, with the landlords on the one side and the country on the other, should have absolute power to say what is the price.

46972. There is a lot of difference, is not there, for when the Government steps in in the case of rent it is about a matter that is to last for fifteen years?—Yes.

46973. And at the end of the fifteen years there is . opportunity to have things revised and altered if cessary. But it is a larger order for the Governent to step in and say to the landlord that this is be the actual price at which the landlord shall part th his land for ever. It is not simply a matter r subsequent reconsideration?—Well, it is logically out the same. No man has an absolute property in nd.

46974. That is a new theory?—Well, it is not a w theory. It is an old theory.

46975. Most Rev. Dr. O'Donnell.—You have underken to show to Lord Dudley that there is a case for mpulsion?—Yes.

46976. And he put to you that negotiations were ing on with regard to this farm?—Yes.

46977. And you are able to say that there was no rospect of those negotiations ever succeeding?—ever.

46978. Sir John Colomb.—I do not understand that nswer?—I do not see any result coming from those egotiations. There is a hut and ten police now enged minding one man.

46979. Mr. O'Kelly.—Mr. Melvin, I suppose it is tly accurate to say that so far as the West in conrned the Land Act of 1903 was passed for the purse of putting an end to congestion. Is not that ?—Yes; so it was intended.

46980. On this particular estate there is a large mber of small holdings?—Yes, and on the surunding estates also.

46981. And the landlord refuses in the first instance sell and then gets an auctioneer and proceeds to ll those holdings to the highest bidders?—Yes.

46982. Naturally enough the small farmers on the tate not being very well off would not be able to pay e amount of money required?—Yes.

46983. And they would be shut out?—Yes.

46984. And congestion would be stereotyped on that roperty?—Yes.

46985. And did not a representative of the landlord fer to give these particular farms to the small tenits at certain fines?—Yes.

46986. Suppose that plan had succeeded, do you not ink that every landlord in the West being able to t 12 or 14 years' purchase in excess of the proper rice would have resorted to a similar procedure, and at auctions would be held all over the country?—hey would all go by the same method.

46987. And you would have auctions everywhere?—verywhere.

46988. And therefore the very people whom the Act 1903 was passed to improve the condition of would all shut out?—They would be all shut out in that se.

46989. And only those who could pay larger fines uld get the land?—The graziers would have it still.

46990. And it was against that thing that public inion protested?—Yes.

46991. Chairman.—But that does not answer my estion. It is a history of the question, but what I ant to know is how that history illustrates the quesn of compulsory powers?—It shows how tenacious e landlords are to get anything more for their rms. And they refused point blank to sell to the tates Commissioners or Congested Districts Board.

46992. But did they?—They have been approached nd a question has been asked in Parliament about it.

46993. That is the point. Can you state it from ur own knowledge?—I cannot say what I do not ow.

46994. Most Rev. Dr. O'Donnell.—There are only o points on which I wish to ask you about that, r. Melvin. Is not it a well-known fact that the all occupier in Ireland suffers from what has been lled land hunger?—It is.

46995. And the consequence is that the tenant-right a small holding goes to an altogether excessive rice?—An exorbitant and excessive price, more than is ever worth.

46996. The tenant-right of a small holding goes for ore than it is worth?—Yes.

46997. Hence if the tenant-right were put up to the mpetition of small men, supposing they had the oney they would give too much for it?—They would o to the bank and borrow it at any price in order to cure holdings for themselves.

46998. And the auction price would, as a rule, be n excessive price?—An excessive price.

46999. I wanted to ask you this further question. You mentioned a rent of £1 2*s.* an acre?—Yes.

47000. That is a vital element in the case?—It is.

47001. That rent is the basis of the fine and the basis of the future instalment?—Yes.

47002. Can you say to the Commission whether that £1 2*s.* is an excessive rent?—At the time it was to be sold the rent was lower, but no auction took place. It proved abortive because public feeling rose against it. The rent it is now held at is higher than the rent it was sold at. When they were paying the fine some said something of that sort. It is £1 8*s.* now. I do not know that of my own knowledge, only hearsay.

47003. Do you consider £1 2*s.* a high rent for that land?—I do, when coupled with taxes. I consider it a high rent taking into consideration that there are no buildings on the land.

47004. Chairman.—And there are so many people willing to pay that rent that the landlord actually put it up to auction?—That was the only case here, except one more, that ever arose in the union.

47005. But he succeeded apparently?—He did not succeed in selling it. Public opinion arose and the people would not take it.

47006. But he succeeded in spite of it?—He did not succeed in the negotiation at all. It was advertised and he sold it privately, but they all withdrew.

47007. At any rate, although the rent £1 2*s.*, you say, is a high rent he is able to sell that land for 10 or 12 years' purchase of the rent, so that there are people who are willing, not only to pay a rent which you say is a high rent, but 10 or 12 years' purchase as an addition?—The rich men. But then the Land Act of 1903 would be frustrated and the poor man with very bad land would not get it at all. If a thing of that sort was allowed the graziers would be back again and the last state of them would be worse than the first.

47008. Mr. Kavanagh.—You are in favour of compulsory purchase?—I am.

47009. Are any voluntary sales taking place in this county?—Practically speaking there have been no sales in the bulk of the union with the exception of a few cases where the land is in Chancery. There have been a few, but only a few.

47010. What do you think the compulsory powers should be—what would be the compulsory powers as compared with voluntary powers—for you know compulsory powers must be defined?—Yes.

47011. There have been some voluntary sales in this county. Suppose compulsory purchase was brought in, how would it compare with voluntary sales?—I see no compulsory sales.

47012. Of course, but you have them in your mind. You recommend compulsory powers?—I do.

47013. You must have in your mind some compulsory powers, must you not?—That would depend on the land. The Estates Commissioners and the Congested Districts Board, as the case might be, might set the price.

47014. But would it be more or less voluntary sale?—It should be about the same.

47015. As the voluntary sale?—As the voluntary sale.

47016. You consider that fair?—I consider voluntary sales to be fair.

47017. Sir John Colomb.—Are you a farmer yourself?—I am.

47018. What is the extent of your farming?—I have about thirty acres—fifteen acres in one place and sixteen acres in another.

47019. Far apart?—No.

47020. Do you reside on both?—No; I have a residence on one of them.

47021. And therefore you are a non-residential holder of land?—I have twelve acres adjoining my own, and another holding I have is a permanent holding.

47022. Is it grass?—It is meadow and grass. I graze it and meadow it.

47023. Then, applying Mr. Kavanagh's question with respect to your own case, that is untenanted land in the sense that it is non-residential?—Yes.

47024. You agree that a Government authority should come in and have that land at their own price?—Yes, if I have an economic holding.

47025. What is the extent of your two holdings?—There is twelve and a half in one and thirty in the other.

Aug. 21, 1907.

Mr. Matthew J. Melvin.

47026. The land you live on is the thirty?—Yes.

47027. And what is the extent of the land you do not live on?—Twelve acres.

47028. And that is grazing and meadowing?—I use it by tilling it sometimes.

47029. And that would go for enlargement of holdings?—It would.

47030. And would you propose that the Estates Commissioners or somebody else, should come in and take that also?—What is sauce for the goose is sauce for the gander.

47031. Are there uneconomic holdings near your land?—There are a few.

47032. Then, they might begin with you?—Yes, by all means; but why should not I suffer as the rest.

47033. You would suffer?—I might feel it for a time perhaps.

47034. But if you put that land up for auction you would get a certain price, and yet you want compulsory powers?—It is in my family for years.

47035. My point is this. You advocate compulsory powers to prevent the private auction of land?—I do not prevent the private auction of land, selling the chattel interest in the holding of a man. I say no such thing. But I object to dividing a big grazing ranch into holdings and selling it by auction to deprive the man who is legally entitled, according to the Land Act of 1903, from getting it—the poor man.

47036. Then, I take it from you that you think it would be perfect justice for the State to step in and fix a price and give you less money than you could sell it to a friend for. Do you consider that right?

47037. Mr. KAVANAGH.—He said the voluntary and compulsory powers would be exactly the same?—The same.

47038. Sir JOHN COLOMB.—Then, you mean that in applying compulsory powers to your own case the Estates Commissioners are to be bound to give you what you would get otherwise from anybody else?—Well, that is a hard question.

47039. That is a practical question?—Well, it is, put the way it is.

47040. I wish to get your view, you being a man of intelligence?—I think I am a man of intelligence, and I think what would be fair to myself would be fair in the case of the next man, and what would do the other man should do me, for the good of the community.

47041. You think it is for the good of the public that the Government should take your land at less than you could get from anybody else for it, whether you liked or not?—If I have a grazing ranch.

47042. You say you have a farm separate from your other farm, upon which there is no residence, which you alternately graze and meadow, and you think it would be consistent with a policy of justice that a public body should take that land from you at a less price than you could get for it?—At a less price?

47043. At a less price than you could get for it?—I say the same price as voluntary sale.

47044. At all events at the same price?—I think the State ought to be the judges. They are going to advance the money and they should be the judges of the value of the land.

47045. You say the Estates Commissioners should give you the same price as you could get by voluntary sale. Is that your position?—What would I be selling—my chattel interest?

47046. You have described over and over again a holding which is a non-residential holding?—Yes.

47047. Would you consider it right that the State should take that land from you and force you out of it at a price equivalent to a voluntary sale?—If necessary to enlarge holdings that are uneconomic.

47048. How would you arrive by compulsory powers at what the price at a voluntary sale would be—could you give the Commission any indication of how you would apply that in practice?—What a voluntary sale would be?

47049. The price, by voluntary sale, of your holding. How would the Estates Commissioners fix the price fairly between you and them?—They are supposed to be competent judges and they must know the value of land and the price of market produce.

47050. Mr. O'KELLY.—What do you mean by saying that one farm is separate from another?—It is a few perches away.

47051. What intervenes—is it the road?—The road. They are on two separate estates. That is all the difference.

47052. Mr. SUTHERLAND.—Suppose a railway was run through there, you would have to give it up?—And why not?

47053. The thing happens every day?—Every day.

47054. So compulsion is common enough?—Yes, and it is necessary; and they could run a railway through my house.

47055. Sir JOHN COLOMB.—Then, they give a higher price?—I do not think so.

47056. Have you had experience or knowledge of where railways compulsorily acquire land and the prices they pay?—I have had. I have seen the Killala Railway. I have seen both voluntary and compulsory purchase. I have seen them going to lay that out.

47057. And have you not found, in your experience, that the price is much higher than is otherwise acquired in voluntary sale?—In a few cases I have seen that. I wish to state that one gentleman holds 654 acres of land surrounding Crossmolina at a valuation of £300. Another gentleman holds 524 within the union at a valuation of £318 round the town of Ballina; and another 170 acres, 0 roods, 29 perches at a valuation of £100 10*s*. And there is a farm of 33[illegible] acres beyond the town at a valuation of £144. Thus if you go a few perches beyond the town you see nothing before you for miles only one huge ranch with one herd's house or two, and no more. There is another farm of 163 acres, and another of 69, and another of 62 acres, and another of 31 acres. There is a farm of 50 acres on the same landlord's estate, and another farm of 65 acres belonging to another landlady.

47058. Is there any tillage on those lands?—Nothing. There is nothing but a herd.

47059. They are all absolutely without tillage?—All absolutely. The 654 acres belong to a shopkeeper of Belmullet, in the town of Belmullet. The lands are immediately near the town here.

47060. I suppose a good many shopkeepers have grass lands?—Some of them.

47061. And would you apply it to them as well as to the landlords—would you turn a shopkeeper out of the land as well as a landlord?—I think the cobbler should stick to his last.

47062. Most Rev. Dr. O'DONNELL.—You have read out a list of large grazing ranches and you have given the valuation of them?—I have.

47063. I notice that in no case does the valuation of the land come up to £1 an acre?—No.

47064. I daresay much of this is good land?—Some is good land and some is inferior. It has deteriorated. I know several grazing ranches that, in my opinion, have deteriorated.

47065. Do you know how rent and valuation compare in this part of the county?—Griffith's valuation we know here, and the rent and valuation are nearly equal. They are equal, or very near it; some higher.

47066. And one would think that the land would be worth £1 an acre?—Some of this land would not be. I have certain land in my eye now that I have seen thirty years ago feeding more cattle than it is able to feed now. If those lands were held on a mixed system of farming they would be better.

47067. Sir FRANCIS MOWATT.—It would support people if it was tilled, and put under a mixed system of farming, and divided into holdings?—It would improve the land. It has deteriorated considerably.

47068. Sir JOHN COLOMB.—You consider land under tillage pays better than in grass. You consider the tillage system is the best. How then have people who have it in their own hands let it go into grass when grass pays worse?—I will not say it pays worse, but tillage is better.

47069. But mixed farming, you say, is more remunerative than grazing and meadow?—If those grazing ranches were sub-divided they would support a greater number of people.

47070. My point is: is it your experience that land pays better by mixed farming than by grazing?—What I hold is that if those grazing ranches, second class land, were sub-divided into small holdings they would support a larger community than they do at present. Take, now, Belgium, for instance. It is not much bigger than Munster. I have been there, and it supports a population of seven millions of people.

47071. Most Rev. Dr. O'DONNELL.—You say you have been in Belgium?—I have been all over Belgium, and it would be a very good job if Irish farmers were sent there occasionally. It contains a population of seven millions to-day and eighty years ago it was just as backward as Ireland. I hold that if those grazing ranches were

sub-divided into economic holdings and a mixed system of tillage agriculture adopted this country would support a population of eight millions of people instead of less than five.

47072. Sir JOHN COLOMB.—But take the farmers as they are. Put aside the grazing ranches for a moment and take an average farm, the same as yours. Is it your opinion that the land is not made the best use of, and that if it was put under a different system of cultivation, and worked on the mixed system, the population of this country would be a good deal better off?—I believe that.

47073. And there would be more employment for labourers?—Yes.

47074. Even without breaking up the grazing ranches at all?—I do not understand that the land should be regarded as the property of brutes. It is in Ireland alone that man is regarded as fit only for the bogs and mountains, and that the brute is to own the rich plains.

Mr. JOHN CORCORAN examined.

47075. CHAIRMAN.—You represent the Killala Union?—The Killala Union.

47076. You have been kind enough to give us a precis of your evidence?—Yes, my lord.

47077. Would it do if you read that?—Before I commence upon it I have got some information from the Clerk of the Killala Union relative to the number of small holders.

47078. I do not know that there is any particular point that you want to draw our special attention to with reference to it?—There are 909 holdings in the Killala Union under a valuation of £4; 534 between £4 and £8, and 331 between £8 and £10. There are seventy-eight between £15 and £20, and 146 over £20. Then, with regard to grazing land, there are within the union 6,728 acres of land in the hands of landlords let to parties under the eleven months' system for the purpose of grazing. The valuation of the 6,728 acres is £3,054. Miss Susan Pringle holds 2,959; Miss A. G. K. Gore, 483; Mr. Bertram W. Bourke, 1,080; Mr. John V. Knox, 388; Mrs. Percy Knox Gore, 340; Mr. S. C. M'Cormick, 197; Mr. G. O'M. Ormsby, 266.

47079. I suppose all these figures are taken from Mr. Ginnell's return?—I got them from the Clerk of the Union. The total valuation is £3,054, and the total area comes to 6,728 acres.

47080. Some of this land is rough land, which would not be suitable for tillage?—The part of it I am most acquainted with is round about Killala. Miss Pringle's part is superior land, and there is very little bad land on it. In fact, for miles about Killala, within the Killala Union, on the far side, it comprises waste land. There is no population at all. No people live on these ranches with the exception of an occasional herd.

47081. I find that at Carrowmore Mrs. Susannah Pringle has 228 acres, with a valuation of £36?—That is down near Ballycastle; but within the union she holds 2,959 acres.

47082. That 228 acres of land, valued at £36, cannot be very first-class land?—But the lands convenient to Killala are most valuable lands.

47083. But I suppose in giving us the number of acres as 6,728, or whatever it is, we must assume that a certain proportion of that is land unsuitable for tillage?—It is not all perfectly good land; but some of it is very superior land, some of it medium land, and some of it bottom land.

47084. These returns are sometimes misleading in that way?—Not altogether misleading. We could not class the whole number of acres as being superior land.

47085. The best way is to compare the acreage and valuation?—The acreage is 6,728, and the valuation £3,054.

47086. Most Rev. Dr. O'DONNELL.—That works out about 10*s.* an acre?—Yes.

47087. That shows that it is fully up to the average?—It is average land—some very good, some middling, and some inferior. The Killala Rural District Council embraces the greater part of the barony of Tyrawley; Ballycastle being the most important centre. The population of this district is about 9,000, roughly speaking; the area 165 square miles, and the valuation £20,437. There are, unfortunately, more than half the tenant farmers under £5 holdings. I find from my experience that these unfortunate small holders were in days gone by compelled to take up pieces of bog and mountain or any kind of marshy bottom land that the landlords could make nothing out of; and when, by their hard work and industry, these poor people reclaimed their bad holdings, they were compelled to pay increased rents.

47088. Sir JOHN COLOMB.—You are speaking now of previous to the Act of 1881?—I am speaking of Tyrawley.

47089. But that remark applies to the period before 1881, nearly thirty years ago?—Oh, yes; I am speaking of when these people acquired holdings in this district. Of course, they are wonderfully improved since. In good seasons, with an abundant supply of potatoes, these people may be able to eke out an existence, but when they have a bad season, such as the present one promises to be, these unfortunate people, with large families, are reluctantly compelled to make application in some cases to the union, and other cases make a determined appeal to the Government. I know what the latter appeal means—we are asked to put the 13th section into operation. The Government to pay £75 out of every £100 expended, the union and County Council to pay the other £25; and then to employ unfortunate men, women, and boys at the low wages of 10*d.* or 1*s.* per day. This system of charity or relief I consider most degrading and demoralising to our countrymen and women. We have thousands of acres of the most fertile lands within the union, and I have given the number of acres, the names of some of the owners, and of these who have them grazed under the eleven months' system.

47090. CHAIRMAN.—Still although, of course, every form of relief must be unfortunate, and every form of relief must be a system which must show a want of prosperity in the district, at the same time, as far as this system goes, it is not a bad one at all?—Well, it is the last shift anyway. If people could possibly manage at all it would be much better if they were not asked to accept it.

47091. Most certainly. But where, unfortunately, outdoor relief is necessary, can you suggest any way in which that scheme could be obviated, and it is a generous one as far as the Government is concerned?—It is generous; but then it is, after all, most unfortunate that we should have to be begging every year when the country could be improved.

47092. Naturally, one would wish to look to a better state of things?—No country in the world has to apply to the Government for relief except Ireland.

47093. Well, if you do have a necessity for a scheme this particular scheme is not a bad one at all?—I do not consider it a good one. It is the last shift sooner than allow the people to starve.

47094. How would you improve it?—The Government could improve the position of the people that they could be in such a way that they would not have to apply to us for charity.

47095. But, even supposing that is done, it must take a little time, and there must always be a danger of a time of temporary distress. Can you suggest in any way how that system could be improved?—I suggest that money should be expended on the country in drainage, in one way or other, and in opening up railways. It is most demoralising, and we tried not to put it into operation till we had to do it.

47096. Mr. SUTHERLAND.—But you have only had to pay a fourth?—No.

47097. But is not giving a fourth in order to get three-fourths a good inducement?—Well, no; the most of the wages goes to superintendents and gangers.

47098. Is that because the wages are too low?—Well, the wages are very low, and the amount of work that they are generally paid to do is heavy.

47099. You complain of want of generosity?—If there was some other scheme these poor people could get work.

47100. But the point is that you condemn this Government because, I suppose, it is not generous enough?—Well, I consider, at all events, that it is very hard to have the Irish people applying to the Government every other year for relief.

47101. That is a matter of principle; but having done that, and having got the 75 per cent., do you

Aug. 21, 1907.

Mr. John Corcoran.

not think that is liberal?—Yes. Well, it is fairly good. It is only in a case of real necessity that people are often compelled, I suppose, to accept it.

47102. Most Rev. Dr. O'Donnell.—I think the point that you started from was that it should be the function of the Government to see that something was done to put the people permanently above the need of this class of work?—Yes, my lord.

47103. Chairman.—The point that I understood, and the point I wanted to draw your attention to, was, as far as this scheme is concerned, how would you suggest an improvement of it?—The only suggestion I could make is to improve the country generally.

47104. Mr. Sutherland.—You object to the particular kind of work on which the money is spent?—Yes. Sometimes the money is not spent to the best advantage.

47105. Sir John Colomb.—Who determines how the money is to be spent?—The local authority sometimes.

47106. In this case, as long as you give employment it is within your power to state how these men are to be employed. Is not it within the discretion of the administrative body, who pay one-fourth while the Government pays three-fourths, to decide what work they put these men to?—It is.

47107. You complain that the work is not the best sort. It is then the fault of the local authority, who have discretion as to what work they put these people at?—My complaint is that I think it is very hard to have our people having recourse to these applications every year.

47108. Do I understand properly, that having the power of putting the 13th section in operation, and getting so much money, and spending so much money, the local administration has the determining of the nature of the work?—I know that though they administer this money the officials and people connected with it take away the principal part of the money.

47109. That is not my point. You leave on my mind this strong impression—that if the work is not the best for the people that it is the fault of the local authority, and nobody else.

47110. Mr. O'Kelly.—Do you express the unanimous opinion of the County Council when you say that they objected to this arrangement?—Yes.

47111. Yes?—I say that, generally speaking, the feeling of the whole county of Mayo is that it is very hard to have our people applying every year for charity.

47112. Would you say that the way to put the people permanently above the need for these periodical doles would be to have the grass lands divided amongst them?—Yes.

47113. That is the only hope considering that in your part of the country you have no industries?—Yes; taking into consideration the fact that we have 500 families in our parish.

47114. You have heard Mr. Melvin's evidence?—Yes.

47115. Do you agree with what he said about shopkeepers owning grazing land?—Yes.

47116. Do you know any shopkeepers in your part of the country who have grass land?—I have grass land myself.

47117. And I suppose you would be willing to set a good example by yielding it up?—Well, I have not a large quantity of it, and am paying a very good price for it. When shopkeepers are living in isolated and backward little towns in the country and not kept very busy, they wish, as a rule, to acquire some land in order that their time may be employed.

47118. You have no farm?—I have a tenant's interest in 80 acres in Kilfian.

47119. It is non-residential?—Oh, yes.

47120. And I suppose you would be quite willing to apply the principle of compulsion to non-residential grazing land?—I would like the present Commission to be favourable to extending the means of increasing the holdings of small tenants.

47121. Supposing the State adopted that view and that there was not sufficient land without taking the lands held on the 11 months' system, would you be prepared and willing to apply the principle of compulsion to such non-residential grazing land?—I have myself land on the 11 months' system, and if there is not a sufficient quantity of land for the poor people I would be glad it was taken by the State and I would be prepared to take the price. I believe I would be handled fairly, and I believe that if we had the people of the country more comfortable and a larger population, shopkeepers would not require to buy land, and I would be content to stand behind the counter. I would not want land; I would want to attend to my business.

47122. Do you not think that the business that enables a man to acquire a great deal of land in the country after all is the business to which that man's time ought to be given?—I do not know. In the small country towns we might be busy on fair days and market days, and have nothing whatever to do during the other days of the week. It depends upon how some people work at their business in making money and investing it.

47123. You are in favour of applying compulsion to land held on the 11 months' system?—Yes.

47124. If I suggest to you, because we have it in the return, that there is not enough land for the relief of all the congestion in the county without making use of the 11 months' land, do you say that you would have no objection that the land which you have at Kilfian, the 80 acres, should be broken up for the benefit of congests?—Yes; none whatever; provided I got the price of it, and I believe, whatever party would fix the price, that I would be fairly well handled.

47125. There was an estate recently sold in Ballycastle, the Madden Estate?—It was not sold.

47126. But it is in the process of being sold?—I hold a twenty-acre field and I am prepared to give up the moment that estate is sold.

47127. But that property has been in the market for some time?—For a length of time.

47128. There is a considerable quantity of grazing land attached to that?—Only about 54 Irish acres, a very small take.

47129. Am I right in suggesting that the local congests are rather anxious to get those 54 acres?—Yes.

47130. Am I right also in suggesting that considerable opposition to their getting those 54 acres was shown by shopkeepers in the town?—There are quite a number of people, shopkeepers in the town, having holdings on the Madden Estate and are joined with the tenants to get Judge Ross to sell the whole of it, town and country together, because the Estates Commissioners made an offer and there was some doubt about the Estates Commissioners whether they would give a piece of land with the houses or not, and there was another section of people expecting to get portion of it, but we assisted the people to get the land sold.

47131. How are these houses held?—The shopkeepers hold their own houses yearly.

47132. Is there land attached to those houses?—No; but we were under the impression that if the Estates Commissioners acquired the land they would take the houses and all together, and there was an offer made for the entire estate, grass land and houses, and they offered to pay £15,000 odd.

47133. Of course you say properly that the only way to put an end to congestion is to give the grass lands contiguous to the congested area to the local congests?—Yes.

47134. Do you not think, if that be your view, that the best thing to have done was accordingly for you and others who were so concerned about the lifting up of those people to give up the 54 acres of land, adding on those 54 acres to the holdings of the small people?—I went before Judge Ross and offered to give up my portion of the land. I can tell you that you were wrongly informed.

47135. No one informed me?—I can tell you the facts.

47136. One question. I notice here that you are very strongly of opinion, concerned as you are for the welfare of the small congests, that the only way to help them is by giving them the grazing lands contiguous to their holdings?—Certainly.

47137. Here is a case in point. Here is an estate being sold, the Madden Estate?—It is not sold.

47138. Well in process of being sold?—Yes.

47139. There are 54 acres of grazing land attached to it?—Yes.

47140. A part is greatly congested and that congestion is contiguous to the 54 acres?—Yes.

47141. Why do you not say, "The only way is to give them this land; we are shopkeepers and can do without it, and I will give up these 20 acres"?—I have sent word proposing that the very moment I am asked for the land I am prepared to give it up. I would be only too glad to see the land divided

mongst the tenants. The Estates Commissioners ade an offer of £15,000 for the entire property, ouses and lands all together. It was surmised by me of the parties that a proportion of this waste nd would be allocated to each house. A great num- er of the Madden tenants are mechanics and others re small shopkeepers. The Commissioners came to the onclusion that it would be very good to allocate an cre to each house, in order to make the houses more aluable.

47142. How many mechanics are there in the town mong whom it might be divided?—There are eight r ten, and there are a few shopkeepers too who expect o get an acre or two with their houses.

47143. Once you have provided an acre each for the ight or ten mechanics in the town of Ballycastle then ou are willing to use your influence to see that the alance of the land is given to congests?—Yes.

47144. Have you had any of the shopkeepers asso- iated with you?—I am sure I had.

47145. CHAIRMAN.—Just to clear this up. Do you ake this land as 11 months' land?—I do; it is part f the Madden Estate land. I have it for the last wenty years as accommodation.

47146. When you speak of giving it up you merely elinquish your occupation of it?—Well, my lord, I ave information that parties that have 11 months' enancies on the property to be sold before Judge Ross, f they wish to keep the land the judge will give them he preference, having been in occupation for some ears; but I did not take advantage of that. I went efore the judge and told him that I was prepared to ive it up.

47147. No money would pass?—No money would ass.

47148. And if no money passes, and if you give it p as an 11 months' tenant you merely do not renew our tenancy?—Yes.

47149. What do you mean by telling us just now hat you were prepared to give up the land because ou felt that you would be fairly well handled, for hose were your own words?—I have two houses put nto one on the Madden Estate, and when the Estates Commissioners would buy the houses and land they may give an acre or so with each house, in order that the tenant may have the grass of a cow, and it would also make the house more valuable. As to being well handled, there was no meaning in that whatever, be- cause I would get no money.

47150. When you said "well handled" you did not mean it so far as price was concerned?—No. I may have said it with regard to the other farm, that I might be fairly well handled.

47151. It was not so far as this is concerned, but in the other case you think that in any distribution of land you ought to be left an acre or a small portion which could be added to your town house and increase therefore the value of your town house?—Yes, my lord. I think that word, "fairly well handled," was in reference to the non-residential farm, that if it was taken from me I would wish to be fairly well handled.

47152. That is the other one?—Yes.

47153. What did you mean by that?—To get a fair price.

47154. What do you mean by a fair price—what would satisfy you as a fair price?—I do not exactly know indeed. I could not say what would be the value of it, but I am certain any party going to pay the price of it would know.

47155. I suppose your books show what profit you make out of that holding?—Well, it pays very well.

47156. You keep your books?—Not very accurately.

47157. I suppose in such a way that you could tell what profit you get from your farm and from your shop?—At the opening of the season cattle pays well, and there is a fall in price at the end of the season.

47158. But your books would show the results of the year's operations?—Yes, my lord.

47159. Supposing that the people who had to assess the value stated as the fair price a sum that did not recoup you for the amount of money that you had made on that holding in previous years, say, on the average of five years, and that the price which they said was the fair price would not be one that would give you that average amount, would you consider that a fair price?—I would not consider five years a fair price.

47160. But suppose that for the purpose of esti- mation you take a period of five years and you say, "I have averaged a profit of" anything you like, say, £100 a year, and supposing that you find from your books that your average profit taken over the five years was £100 a year; and supposing the Estates Commissioners come down and said to you, "Now, we want this land because we have got to increase uneconomic holdings, and we are free to take this land from you compulsorily" and that you say, "All right. I have no objection so long as you pay me a fair price," and they say, "We think such and such a price is a fair price," and you find that when you invest the money that they give you you cannot get £100 a year out of it, would you say that was a fair price?—I would have to be satisfied all the same. People often lose in speculations.

47161. Would you be prepared to say that the fair price was a price less than what you have been previously making?—If an Act was passed that they could acquire it by compulsion I could not say a word. I should be content with what I would get.

47162. You would be content?—I should be. If it was passed I should be satisfied.

47163. You would not question it if the Estates Commissioners took the land at any price they chose?—I believe the Estates Commissioners would give me the value of it.

47164. What do you call the value of it?—The sum they would give when they considered the land.

47165. Nobody knows better than you the value of it?—But they would not be guided by me.

47166. But you would guide yourself by what you know of the value of the land to you?—Of course I pay a pretty high rent for it and taxes, and I would take that into account.

47167. Would you consider that it was right to say that the value of that land to you is the amount of money which you make out of it?—Oh, yes; the profit I make yearly out of it; and, of course, I have a tenant's interest in it.

47168. And considering all your interests, is not it right to say that its value is the amount of money that it brings you in every year, taking the average over a number of years?—Yes.

47169. When you speak of a fair price, would you consider a price fair which would return you less than the value to you?—I might not consider it fair, but at the same time if it was an established law that they could come down and take this, what could I say? I should be satisfied.

Well, you are a very public-spirited person.

47170. Most Rev. Dr. O'DONNELL.—What would you consider a fair price?—I do not know, really. I was not going into the matter at present, but with regard to the tenant's interest, I consider that the tenant has as much interest in the land as the landlord at present.

47171. Does your income from that farm vary much from year to year?—Oh, it does, my lord.

47172. Very much?—Not very much, but some years it pays very well, and other years not so well.

47173. If one were trying to find out your annual income from it how many years would he want to go over for the requisite average—would five years suffice?—Ten years, my lord.

47174. Would you expect, in order to be fairly satisfied with the price you would get under compulsion, that it should be such that the money when invested would give you the whole balance of profit?—Oh, no; I would not expect that by investing the money, but if I could get nearly the amount of money, even within 20 or 25 per cent.

47175. You would save any trouble of management?—Yes, my lord.

47176. And would be free from the contingencies of the future?—Yes, exactly; and could devote more time to my business.

47177. CHAIRMAN.—I do not understand your remark as to the conditions which would be sufficient to satisfy you?—I would not be better pleased, only I would not stand in the way if there was not a sufficient quantity of waste land, of grazing ranches, to improve small holdings—that I would not stand in the way, and that I would be only too glad to see non-residential holdings split up.

47178. Would you take the same view if it was done to your shop?—Well, perhaps if I had not the shop I would be more determined to stick to the farm.

47179. You regard this as your secondary means of livelihood?—Yes, my lord. My shop is the first.

47180. Then, would you say, "My shop is my first consideration, and in order to have a good shop I have got to be on good terms with my neighbours, and therefore it is not worth while my higgling about the

Aug. 21, 1907.

Mr. John Corcoran.

price of my farm, and perhaps making enemies, which might decrease the business I do in my shop "?—That is all a consideration.

47181. But supposing you had not got a shop, supposing you lived entirely on the income of your holding, do you think then that you would consider it a fair bargain if the Estates Commissioners were to give you what would actually return you 20 or 25 per cent. less than your income?—No, if I were depending upon it.

47182. And therefore we can suppose that people who do depend on such an income would be rather horrified by a proposition which entails 20 to 25 per cent. loss on them?—For my part, I think that whatever parties have holdings, and have rents fixed and are living out of the land, it would be very unfair to take the land from them.

47183. Sir JOHN COLOMB.—You spoke in the beginning about shopkeepers acquiring land and accounted for your own action and the action of shopkeepers generally in acquiring grazing land, and I understand that your reason was that having made some money by your exertions you wished to invest it and therefore as there was no other opportunity of investing it in Ireland you bought land. Now, supposing all the land became tenanted, and there was no such opportunity of investing money, do you or do you not think that the result would be that the shopkeepers in future when they would have money to invest, having, as you say, no other means of investing it would buy the holdings of tenants who wished to sell?—I do not know. First of all they would do more business by having an increased population, and a better class of people.

47184. They would make more money?—Yes.

47185. And they would have more money to invest?—Well, they would invest it otherwise than by the buying of land. If the people were more prosperous, business people would have more money.

47186. More money to do what they liked with?—Well, they would. For my part, I am most anxious to see an increased population. If there were more people to drop into our places we would have more business to do.

47187. And that would mean that the shopkeepers, with all the increase of population and more business and all that, would have more money to invest?—They could go to some other form of investment.

47188. Mr. O'KELLY.—You drew a distinction between land held on the eleven months' system and a non-residential farm. How is that?—I say if parties have land on the eleven months' system that land ought to be acquired by the Government. The Estates Commissioners should have the right to buy it up, and to remove a lot of people that are living in congested areas and congested districts, and to plot out the waste lands for them, and to give them decent holdings of twenty or twenty-five or thirty acres.

47189. Why do you make a distinction between the eleven months' man and the non-residential man?—The eleven months' man has no interest in the farm at all, and the non-residential man is a different class of man altogether.

47190. When you are speaking of the eleven months' man you are in favour of compulsion, and of eliminating the eleven months' man. You must apply compulsion to the man if he is unwilling to sell?—Yes.

47191. Do you say that there should be a distinction made between land that is let on the eleven months' system and non-residential farms?—Why not?

47192. Why do you make that distinction?—Well, the landlord gets the price of his land.

47193. What about the non-residential man?—Of course, the non-residential man has, after all, a bigger interest in it.

47194. Is not it the case that the landlord is the owner-in-fee, and is not it very likely that many non-residential farmers in the country have acquired the farms by the aid of State money, and yet you would make a distinction of that character?—I would make the distinction, because all those patries have made piles of money, and it is only right, if it could possibly be done, to buy them out, and plot out those lands; and if there was a scarcity then it would be only right to acquire non-residential holdings in addition, and the eleven months' ranches should be divided.

47195. Might I suggest that both processes might with advantage go together?—I think there should be a distinction.

47196. Will you tell me this: take the case of a landlord and the case of a grazing farmer, who has acquired a non-residential grazing holding (we have many of them in the County Mayo), having made money in business as a shopkeeper. Do you tell me that greater consideration should be given to him than to the landlord, who did not acquire the property through any State aid?—Well, I think there is a great difference between the two parties.

47197. That is what I want to find out. Where does the difference come in?—It comes in in this way—that the non-resident has bought his holding and improved it and cultivated it, and he partly lives on it.

47198. But it is a non-residential holding?—Without having a non-residential holding he might not be able to survive, and the landlord has thousands of acres, whereas the other man has perhaps only thirty or forty.

47199. I may put this case to you?—I think you are putting it too strongly.

47200. We attach a great deal of importance to you, as a man of considerable experience. Take the case of a man who has non-residential land ten or twelve miles from his own home. Could the least difference be made if the ten or twelve miles were half a mile—should a distinction be made in that case?—There are many that are grazed by parties that have them for themselves.

47201. Suppose we have a congested estate, which cannot be improved without making use of some of the non-residential land. Would you proceed for its acquisition in that case?—Certainly, when you could not get any other land.

47202. But supposing you had not other land?—I am speaking of my own union, where we have plenty of land—as much land as is required. However, if there was a deficiency it would be only right to acquire the other land.

47203. On the question of the sons of congested tenants, have you any views as to whether preference should be given to them?—I have taken a note of it here.

47204. CHAIRMAN.—Proceed?—If all the ranches were bought out by the Estates Commissioners, and reparcelled out to the tenants with small holdings, or, as an alternative, a number of these small farmers could be removed from the congested areas—such as Kilcummin, Rathlacken, and along the coast to Balderrig—and planted on new holdings, and the parties that would be left on these congested areas, their holdings could be enlarged out of the land vacated by those transferred. This would be the remedy I would suggest. From my experience as a business man, I find that the majority of the farmers around here would not be able to pay rent, taxes, shopkeepers, and other debts if it were not for the numerous cheques and money orders that are sent to them from time to time by friends in America. There is scarcely any farmer living around who has not some friend—say, brother, sister, or cousin, and nearly in all cases, some of their children—in the land of the great Republic. About the Christmas season I cash from £700 to £800 for my customers, and then there are a good many others in town who cash some orders and cheques; and the post office, I am sure, cashes large sums. We have no industry in any part of the union, hence it is that there is no employment for boys and girls—nothing left for them but the emigrant ship. I know a great many young men around here who would be glad to accept holdings—say, from twenty to thirty acres, at a fair rent—provided the result of this Commission would be successful, and that the Estates Commissioners got the opportunity from the Government to parcel out the ranches.

47205. You contemplate that those young men, who have no alternative but the emigrant ship, should be given the land?—Yes. There are a great number of them, and we consider that it would be a good means of providing for them, instead of letting them go off to America. My argument is that there is sufficient land for the people who have small holdings, and for a great number of these young men.

47206. And would you say, "Mayo for the Mayo men"?—As Mr. John Fitzgibbon spoke on behalf of his own county, I would speak for my own.

47207. Sir FRANCIS MOWATT.—That is, for your own district, for your own county, not for Ireland?—Yes.

47208. Sir JOHN COLOMB.—First for my own union, then for my own county, then let Ireland take care of itself?—Oh, not that. I am anxious for the whole country. I am speaking now for myself alone.

47209. Mr. O'KELLY.—First of all for myself, next for the town, next for the union?—Oh, no. It has

een stated by landlords and their representatives hat the peasants of the West were too lazy to work. give this the flattest contradiction. If our peaants in the West, who are honest, hardworking, and ndustrious, had the same facilities as the peasants r farmers in other parts of Ireland, who are blessed ith good land, large buildings, and low rents, we ould never hear the recurrent cry of distress. Even ow let the Government treat the Western peasants roperly by giving them more land, and in a short ime it will be seen whether the bigoted landlords or heir representatives who made such an attack on our onourable peasants, were telling the truth. Regardng sale by landlords to tenants, we have not many andlords within this Union who have sold to their enantry. The largest landlords are holding out for xorbitant prices, such as Mrs. Saunders Knox-Gore, Miss Susanna Pringle, Sir Roger Palmer, and Lord rran; these landlords, who acquired their lands fter Oliver Cromwell's great war in Ireland, are insisting on 24, 25, and 26 years' purchase on second udicial holdings, together with a bonus of from three o five years. I would not at the present time, conidering climate changes of our island, and also the hances of the importation of store cattle from anada and Argentine, advise any tenant to pay more han 18 years' purchase on second judicial tenancies.

47210. Sir JOHN COLOMB.—You say the landlords re holding out for exorbitant prices?—Exorbitant rices.

47211. What do you mean by that?—I know that n Sir Roger Palmer's case the tenants made several ffers, and the landlord would not accept. Here hey are demanding 24½ years' purchase, and with the onus I consider that an exorbitant price.

47212. Do you consider the landlord's demand exrbitant when the price capitalised at 3½ per cent. would only bring him his present income—that would eave him in the same position after the purchase as e was in before?—What I took into account was hat before the passing of the Act of 1903 the landords were willing to sell at 18 and 20 years' purhase, and after the passing of the Act of 1903 they were insisting on 24, 25, and 26 years' purchase.

47213. You have mentioned certain landlords, and s a public man coming here to give evidence, you tate before the Commission to the public that they re asking exorbitant prices?—I say they are.

47214. I ask you do you consider a price exorbitant hat means a capital sum when the whole transacion is concluded that if invested at 3½ per cent. would simply bring in as interest to the landlord the ame income as he had before. Do you consider that n exorbitant price?—No, I would not.

47215. Therefore, when you say "exorbitant" you peak without knowledge?—I spoke from the number f years' purchase.

47216. You have no knowledge from your calculaions whether the landlord demands too much?—I annot understand that, where parties were willing to ell in years gone by at 18 years' purchase under the Ashbourne Act, they are now demanding such exorbiant prices for the purchase. And the tenants have made fairly good offers, and they have refused to accept them.

47217. You are acquainted with agrarian history, and you are well aware of this, that under the old Act the terms were sufficient to induce landlords who could not hold their heads up to get out of it at any price, and that with the view of purchase being exended the Act of 1903 was passed to deal with those landlords who could hold on and were determined to hold on; and therefore there is no comparison between the two. You are dealing with solvent men now, and men who cannot be induced to sell in the former way; and therefore I presume no solvent landlord would be unreasonable who might say—"I will only sell at a price that will bring in the income I had before." Do you agree with that?—I do; but, however, I am not aware whether they are solvent or not.

47218. But we are aware of this, that the public policy of the former Act applied to different conditions?—Yes; but so far as I understand there are plenty of landlords at present in Ireland insolvent, and there is plenty of land in Judge Ross's Court, and they are refusing to sell.

47219. Most Rev. Dr. O'DONNELL.—You have before your mind an instance of an owner who has demanded under the 1903 Act a larger number of years' purchase than he was willing to accept before the passing of that Act?—I am aware of that, but from the experience I have had of cases of property sold at 18 years' purchase, I am not aware whether this local offer was less than 18 years' purchase or not.

47220. Mr. O'KELLY.—Are you aware of a meeting in this district before the 1903 Act was passed, and at that Mr. Pratt offered to sell his property at 18 years' purchase?—I am aware of that.

47221. You said that a few years after the 1903 Act came into operation he sold it at 24½ years' purchase?—Yes.

47222. That is a case in point?—That is a case in point—that is a fact about Mr. Pratt, anyway.

47223. Sir JOHN COLOMB.—But if you take a £100 holding, or a £10 holding, and if you count the annuity under the new Act and count the former year's purchase, it would be easy to show that actually under the operation of the Act of 1903 you pay exactly the same annuity as before?—Yes, but there are 68½ years to pay instead of 49.

47224. I am aware of that?—That is a big difference—49 years against 68½.

47225. Mr. SUTHERLAND.—We have had it in evidence that the object of the Act of 1903 was to raise the price of land. Do you agree with that?—Whether it was the object or not, it is well known, at all events, that since the passing of the Act the price of land has been raised, and the landlords are looking for a greater number of years' purchase, and they are not meeting the tenants half way. In my part of the county the tenants on several estates have made fairly good offers which were refused.

47226. Sir JOHN COLOMB.—Would they have left the landlord with the same income that he gets now?—I cannot say. We were agreed, but the landlords were very stiff. They will not meet the tenants halfway.

47227. I daresay some of your customers think you very stiff?—I may think some of them very stiff, too, sir. You can put it both ways.

47228. I take human nature as it is, whether in a landlord, a shopkeeper, or a tenant?—I would not like to be as stiff as some of the landlords, anyway.

47229. CHAIRMAN.—Go on?—I will make some references to the Agriculture and Technical Instruction Department. We in our union have not derived any benefits from the Department of Agriculture or Technical Instruction. I happen to be a member of the County Committee, and anything we ask them, or suggest that they should do, is altogether ignored—they must have it their own way, and there is no attention paid to our application or suggestion. For instance, some years ago we asked them to supply a number of spraying machines to the several congested or poor districts within the county, and although there was plenty of funds for the purpose they would not do so. The Department got notice in due time this year about the blight appearing, and when a question was put, I think by a Mr. Flynn, to our new Vice-President, Mr. Russell, in the House of Commons, asking what his Department was doing with regard to the blight, his answer was that they sent out thousands of leaflets, that they had large posters at the different police barracks, and that they sent out so many men to repair machines and to instruct in spraying, and that they would sell to parties machines at 27*s.* 6*d.* each (cost price) and sulphate of copper at 36*s.* per cwt. (cost price), demanding cash from parties in advance before ordering. I am really surprised that such a Department should be allowed to exist. I know in my own union there were no machines supplied or sulphate of copper either, and as far as I have seen, there were no leaflets. In fact, the people understand the spraying if they have the materials. In some of the districts where the people are very poor the absence of spraying is a great loss to them.

47230. Most Rev. Dr. O'DONNELL.—What have the shopkeepers been doing in their districts to supply machines for spraying?—One gentleman in our district lends machines on hire, and in other cases we sell machines and materials, and we have to wait a long time for the money. We have sold sulphate of copper as cheap as the Department—35*s.* a cwt. I buy it from the United Alkali Company.

47231. You spoke of mending machines and hiring out machines?—The parties hiring out or mending sell sulphate of copper, and they might pay 1*s.* a day

Aug. 21, 1907.

Mr. John Corcoran.

for the use of the machine or 1s. for a small field of potatoes.

47232. The machine is given out at 1s. a day?—Yes.

47233. Would you be able to give it out cheaper than that?—Well, they might have it two days for the shilling.

47234. Mr. SUTHERLAND.—Do you think that it is right that the Department should enter into competition with local merchants in these cases?—I did not say competition, but where there are such poor people and where they make such a boast that they are doing so much for the people, they should make some effort. We pay a penny in the pound on the total valuation of the union, and this rate comes to £85 a year. We have paid that for years, and we have got no results whatever.

47235. What is the average rent of the people who would have to apply the spraying?—Every farmer in the union uses it, but the smaller people having holdings valued at £4 or under are unable to buy the stuff or get machines. The Department of Agriculture boast of being great philanthropists, and say that they help local industry in Ireland.

47236. Should a public Department do what the people can do themselves?—The local Committee often suggested certain things for our people, but the Department paid no attention to it whatever.

47237. Speaking about spraying machines, is not it better that the local merchants should supply them than a Department in Dublin?—Yes. We pay a penny in the pound and get no results, and we make suggestions and know more about the country than they do. They import Englishmen and Scotchmen to superintend and look after the business of the Department, instead of employing Irishmen. What is the use of the Department boasting of doing so much for the people?

That is another matter.

47239. Mr. KAVANAGH.—But you need not strike a rate?—Any particular union could not get out of it. We are in the Killala Union, and the majority might go against us, and they might be getting more benefits in some parts of the country than we in our isolated part of the county.

47240. Has it ever been suggested?—It was often suggested by one or two members that a rate should not be struck, but the majority of the Council carries it.

47241. And the majority of the Council consider that they have got good value for the penny in the pound?—Well, in their part of the county.

47242. Mr. O'KELLY.—You made a remark that a few years ago the County Council refused to strike a rate?—Yes, and I may remark also that a very influential deputation came to the County Council from different parts of the county to ask the County Council to revoke the refusal to strike a rate—persons that were getting benefits.

47243. What part of the County Mayo gets the principal benefit?—Westport, Castlebar, Claremorris, Ballinrobe, Ballagadeerreen.

47244. What do they get?—They have technical schools there.

47245. Technical schools?—A school there for training, and convent schools. They get money.

47246. The convent schools get a grant?—Yes, and Ballaghaderreen gets some.

47247. Ballaghaderreen is not in the administrative county. You are aware of that, are not you?—But does not Claremorris and Ballinrobe.

47248. CHAIRMAN.—We must get on, I think?—And I have never seen any man of theirs coming down to us.

47249. Have you ever applied for an officer of the Board to come down and go over a scheme with you? Never. I have never seen one at all.

47250. But you could, you know. If you were to apply to the Department to send down a man to go over your county scheme with you I am sure they would do so?—We get no value for our penny in the pound any way.

47251. Sir JOHN COLOMB.—Are there any bulls or boars or stallions in your district?—There was one a few years ago, one bull and a few boars.

47252. CHAIRMAN.—That is entirely the fault of your scheme. You frame the scheme yourselves, I suppose?—Well, we have the framing of it, but it is changed a lot in headquarters.

47253. You could frame it differently, taking into account small things from time to time; but the framing and the initiating of the scheme rests with the County Committee, does not it?—No, no.

47254. Most Rev. Dr. O'DONNELL.—But the County Committee frequently find a scheme put before them by the Department?—Yes.

47255. CHAIRMAN.—Those were only the early days; when you drafted a scheme to show you how to do it?—Oh, we know more about schemes than even they do themselves. Scotchmen and Englishmen to dictate to Irishmen!

47256. Mr. O'KELLY.—You have got a premium bull in Killala, Clegg Royson?—No. Clegg Royson is Dr. Macaulay's property.

47257. And you have got nine nominations about Killala?—Yes.

47258. You have got a premium bull at Ballycastle?—Yes.

47259. And another at Tonroe?—Yes.

47260. And a premium bull at Mullavary in Killala?—It is not in Killala it is. It is in Ballina Union. There are no people living about Killala. It is all waste land there.

47261. There are no people at all about Killala?—Very few; a few living in the town.

47262. You have one at Rafflay?—I do not know, really.

47263. Mr. Thomas Dillon has got him—a premium boar?—I don't know.

47264. How do you suggest that nothing has been done for you?—It is very easy giving a boar, but a poor man has to send away his cheque for £2 before he gets him at all.

47265. Do you not think there is a little inconsistency in what you have stated?—I think there are plenty of people to bear me out that they have done very little for us in our union at all.

47266. And, then, an egg station, Mrs. Dillon, Rathen, Claggan, Kish?—That is an egg station. What is the good of an egg station? The principal thing I spoke about was the spraying matter. I suggested, some years ago, the spraying machines.

47267. Did the Department send down any spraying materials this year?—None to our town.

47268. Have they been asked for it?—I think so.

47269. How long ago?—Just immediately after the blight appeared.

47270. What was the answer?—We passed a strong resolution in the union to apply.

47271. What was the answer?—I know it was an official reply.

47272. What were the contents of the official reply?—I do not know. He told me to write and get a report.

47273. How do you know that they have not written to say they will send the spraying material?—What is the good of it now?

47274. I only want to point out to you that they have sent down great quantities of material to Belmullet?—I knew a man came from the Department to get the names of parties requiring spraying machines, and he wanted to get a guarantee before he would give the stuff, and very few people could pay out like that. That was a nice way of doing business.

CHAIRMAN.—What about the fishing industry?

47276. Sir JOHN COLOMB.—Do you wish to withdraw the statement about the Department in view of Mr. O'Kelly's point?—No, I do not wish to withdraw anything.

47277. Sir FRANCIS MOWATT.—You still say that in every case where the Department are concerned things are done in a similar manner?—Yes. For instance, some years ago we asked them to supply spraying machines, and they did not do so, and I have never seen any man of theirs coming to us, nor did they supply the sulphate of copper or machines. In fact the merchants themselves could give better terms. The Department wanted the cash in advance, what does the shopkeeper do? He supplies machines, sulphate of copper, and the rest on credit to the poor farmer, and has to wait a long time for his cash.

47278. Sir JOHN COLOMB.—You say the merchants themselves give better terms, and, therefore, what is the use of the Department coming in?—They have to do it. I am aware that in every case where the Department is concerned things are done in a similar manner, except where the business comes in relation

o paying high salaries to their officials. This is where all the money goes—none whatever for the poor farmer, who has to pay 1*d.* in the pound on his valuation. With respect to the fishing industry, there are several important fishing stations within the union, but for want of proper harbours or piers, and the neglected state of what was once called piers, the fishermen are debarred from going to sea except in very fine weather. The class of boats and the frail curragh with a few hoops and canvas are not at all suitable for the present day fishermen. Even when there is a haul of fish they have to sell it locally at about half or one-third of the price which they could get in Dublin or London for want of proper railway facilities. There is no chance of sending turbot, salmon, or any other kind of fish to the proper markets. If we were blessed with a railway along the coast it would take in the entire union, and would develop and improve our isolated part of the country very much. We would have better fairs and markets; farmers would get better prices for their produce, and our mines, mineral and flag quarries, would be worked to advantage.

47279. Most Rev. Dr. O'Donnell.—You are in favour of the Blacksod scheme?—Oh, yes, my lord. We are in great hopes of seeing the Collooney, Belmullet, and Blacksod Railway scheme carried through successfully, and that operations will be commenced very soon. If so our poor people would be employed, and instead of crying out for relief, due to nearly the total destruction of the potato crop, these people would get such employment as would enable them to provide the necessaries of life for themselves and their families until times would improve. I expect the Government will not be so blindfolded as not to give the subsidy asked by the promoters in order to construct this much-required line of railway, and for ever to establish the all Red Line to Canada.

47280. Chairman.—I understand it is not a question of a subsidy by the Government at all?—That is not scheduled as a congested district at all, but I consider that the entire Killala Union should be scheduled as congested. The whole Board want to have the entire union scheduled as congested.

47281. Most Rev. Dr. O'Donnell.—I understand that there are only two divisions scheduled?—Yes.

47282. Have there been any engineering works done in this division?—Nothing done in Lacken North whatever, except that £50, and a house gets occasionally improved, and people remove cattle and pigs out of the house. They are working fairly well, but they do not get sufficient sums. They got £50.

47283. £50 is a very small sum?—Yes.

47284. And there is only one division of the parish scheduled?—Yes.

47285. And the expenditure would be limited to that part of the union?—Yes. I think about Rathlackin there are eighty or ninety houses.

47286. Is there a good harbour at Lacken?—Yes. The people are half fishermen, half farmers, and when the County Council see anything wrong with the pier they put it into repair out of the County funds.

47287. Where are the properties which you say have been purchased?—Belderig, and a place called Behee.

47288. Is there a grant?—No grant, but they maintain the property. They are building houses there, and changing some of the houses, and they get engineers, and make proper holdings, and make roads into the village, and build houses where they find it necessary.

47289. And that is a class of operations you would like to see extended?—Yes.

47290. Are there many divisions of the Killala Union you would wish to see scheduled as congested?—I am anxious to see the whole union congested. I would like to see the whole union. And, then, with regard to improvements, they are working in Lacken. You will have ten or twelve perhaps living in the same house. And it is a great help to build out-houses. Father Conway is doing his best to make it as workable as possible.

47291. Is there a Parish Committee in the other place, Belderigmore?—No, my lord.

47292. Chairman.—Go on?—The number of paupers in our union is 30 and the number of officials 15.

Rev. John Kelly, examined.

47293. Chairman.—I think you have been nominated by the Bishop of Killala?—Yes.

47294. You have sent us in some heads of evidence. Would you kindly elaborate them?—I presume that it will not be necessary to repeat the statistics given by the other witnesses. I agree with them generally. In the first place, I would say that in my opinion the Congested Districts Board has done a great deal of good. It has done, and is doing, more good than the Department of Agriculture and Technical Instruction, and I think that it is capable of doing more good in the future. But I think it would be well if some new blood were introduced on the Board, in the shape of some two or three representative men, members added to the Board, to be appointed or nominated, say, by the County Councils of counties, that have no representatives at present on the Board.

47295. Why do you say two or three?—For the reason that some of the other counties are already represented. Donegal has a very able representative in the person of Dr. O'Donnell. Mayo has a representative in Father Denis O'Hara; and other counties might complain that they have no representatives to speak for them.

47296. You know that that means six?—I don't confine myself to three or four. Some more men would do no harm. Men conversant with the wants of the localities would do good. I think that the Congested Districts Board, as so constituted, ought to have charge of the purchase of land in Connaught generally and the congested counties of Donegal, Kerry, and Cork, unless on any estate the majority of the tenants are prepared to purchase direct or through the Estates Commissioners. I think that the Board should have discretionary power to schedule as congested any electoral division or part of a division in the congested counties. I consider that the definition of congestion, as given, is very arbitrary, and is calculated in some cases to do harm or injustice. For instance, in some electoral divisions the people might be very poor, and the presence of two or three or four large demesnes would debar them from being scheduled as congested. I certainly think that the Board should have the power, after inquiry, to schedule as congested any division, or part of a division, if need be. I think that the Board should have larger powers of purchasing and holding land in the congested counties.

47297. What do you mean by larger powers?—More money. An increase of revenue so as to enable them to buy more land, and also do more good in the shape of giving more money to rural banks or to parish schemes or other such works. I consider that the most urgent duty of the Board would be to relieve congestion by migrating the poor people from the bogs and the bare hillsides to the good grass lands.

47298. How is that to be done if there are no grass lands?—If there are no grass lands it could not be done; but there are grass lands in the county and in this neighbourhood.

47299. That is, so far as Mayo is concerned?—Yes; and as far as the other counties permit, where grass lands are available, I think that the congested tenants should be removed from those districts and placed on the good grass lands, as far as possible.

47300. Take a county like Leitrim, or Donegal even, where there are no grass lands—where are you going to migrate them?—To the nearest lands available for the purpose—the next county, as the case might be.

47301. How are you going to get over this sentiment of Mayo for the Mayo people?—I don't go in for that selfish policy. I think it would be very unfair to say that no person from outside should come into Mayo. I say that in the first place the congested parts of Mayo should have the first claim; and when their claims were satisfied, any land still available should be at the disposal of the Congested Districts Board for the migration of others.

47302. Then you think the whole thing should be looked on as a broad and national policy?—Yes.

47303. Where there is not available grass land in any given county the congested people should be migrated from there to the nearest point where land was available, even if it were outside the county?—Yes. I thoroughly approve of that.

Aug. 21, 1907.

Rev. John Kelly.

47304. Do you think that the men of influence in your particular county would be inclined to support a policy of that kind?—Speaking from my experience, I believe that our public men would be willing to assist any public authority, such as the Congested Districts Board, in migrating the people to whom you have referred, and that there would be a general disposition to act in a reasonable spirit.

47305. You see that if the theory that the grass lands of a county be confined to inhabitants of a particular county it would mean that practically migration would become impossible in those counties where no grass lands exist?—I agree thoroughly that that would be the result; but I think it should not happen. The whole thing should be dealt with on a broad basis.

47306. Given that migration is the great cure for congestion, admitting new tenancies in the persons of sons of tenants would practically exclude the one great cure in a number of counties?—Yes, certainly. I think that the sons of tenants should not get any land until all the congested persons were made all right. Then, if any land were available after that it ought to be given to deserving young men to settle down on so as to prevent emigration.

47307. Do you think that there would have to be a strong fight before that policy could be adopted?—No. I think there would be no strong fight. There might be some difficulty. Some persons in their selfishness might not be willing to assist this movement, but I think that the general public, and public men, both clergymen and representative men, would assist in carrying out this broad scheme.

47308. You think that they would be strong enough to get their view adopted?—I think so. By all accounts I think that the people would not hold out against the advice and assistance given to any public authority in carrying out this scheme. In order to enable the Congested Districts Board or some such body to migrate the congests I think that in some cases compulsory powers would be required. Wherever the Board could agree with the landlords or other persons having lands on terms reasonable to all parties, then there would be no need for compulsion; but if in any particular cases persons are found unreasonable, and will not sell at all, or will not sell except at exorbitant and unreasonable prices, then, I think that compulsion ought to be brought in with a view to settling this urgent public question.

47309. Of course, when we talk of exorbitant or unfair prices we are speaking vaguely?—Yes. We don't all agree on what may be a reasonable price. It is not easy for everyone to agree on what would be a fair standard.

47310. Would you suggest that it is fair compulsorily to acquire a man's land, and leave him in a worse position than he was in before?—No, I would not.

47311. Would not you say that a fair price for a property is a sum of money which, when invested at a reasonable rate of interest, will give him the income that he has had before?—I would say nearly his net income; because he would have more security in getting his income after he had sold, and he would get it more easily than he is getting it at present. At present his income is somewhat uncertain owing to the possible importation of Canadian cattle, and other causes. If Canadian cattle were allowed in persons with large tracts of grass lands might find themselves in a very unpleasant position by and bye.

47312. Those are all hypotheses?—They are, but they seem to be very likely to occur, and we must as far as possible foresee them and guard against the likelihood of these dangers. But should this thing or other things happen, large graziers might find themselves in a worse position than at present.

47313. If a person insists on purchasing at any particular time he must take the risks of the future, and must be prepared for all eventualities in the future. If he insists on purchasing at a given moment, that assumes that in his opinion the time is favourable for purchasing?—That is so.

47314. If that is so, surely there must be a limit to what it is reasonable to say the future has in store; and the only way you can get at what a fair price is by calculating what is the return which the land brings to the holder, over a certain average of years, say, 5, 10, or 15 years?—That would be a reasonable way of doing business. A man must not be injured, I must say, even for the public good.

47315. If that is what you call a fair price, what reason have you to think that if the Government were to approach a landlord and say to him, "We will give you a price which, when invested at 3½ per cent., will return you your net income," that that landlord would not accept the offer; is not it the fact that hitherto the Government department—perhaps because they had not sufficient funds at their disposal—have not been in a position to make such offers?—I will speak only of what I know in my own experience. In this locality, generally, you may say that the tenants, the people whom I represent, approached the landlords some three years ago and asked them if they would sell, and, if so, at what price. One of the landlords, or his agent, declined to give any reply, or even to acknowledge the request.

47316. That is tenanted land. Where compulsion will come in is not so much in the case of tenanted land as in that of untenanted land?—I think in both cases.

47317. But far more in the case of the grass lands?—It is more needed in the case of the grass lands with the view of promoting migration.

47318. The difficulty of the problem arises not so much with regard to the tenanted, but with regard to the untenanted land. Can you tell us of any instance where a Government department, the Estates Commissioners or the Congested Districts Board, have approached a landlord and have said to him, "We are prepared to pay you for your grass land a sum of money which when invested at 3½ per cent. will return you your net income," and that that landlord has refused?—Men who refuse to sell tenanted land at a reasonable price would be much more unwilling to sell the grass lands they hold in their hands and will charge a bigger price. One landlord who offered land some years ago at 18 years' purchase, asked to my knowledge—for I went on a deputation to him with some tenants—27 years' purchase for the same lands plus the bonus. This landlord is a very reasonable man all round. He was the only man who stated a price. That being so, it is apparent that they will not sell their lands at a reasonable price. Nothing happened to make the land more valuable in the interval between his offering that land at 18 years' purchase and his offering it at 27 years' purchase.

47319. I understand this to be your position: you would like to see a Government department approach the landlord in the first instance and offer him a fair price—and when we say fair price we mean a price that will leave him no worse off than he is at present—and then, if you found that that landlord was unreasonable and refused to consider what ordinary men would consider a perfectly reasonable bargain, then compulsion should come in?—Yes; only in such a case as that would I have recourse or resort to compulsion. Very little land has been sold in the County Mayo generally, and hardly any in North Mayo, for the simple reason that landlords have been asking prices so high that people could not think of buying in view of the possibilities of the importation of Canadian cattle and the uncertainty of the seasons. We suffer greatly in this part of the world from storms, which in the months of July and August often do more harm to crops, particularly to the potato crop, even than the blight. In the migration of tenants it would be well to select only the most active, the young, strong, and energetic men, for the simple reason that old men don't like being removed from their surroundings, and think it as well to stop where they are and finish out their course as to be sent to a distance.

47320. Most Rev. Dr. O'Donnell.—That is to say you would be careful in selecting your migrants?—Yes. It would not be well to take people who would not do much good.

47321. You would pick out the men of energy and enterprise?—Yes, and with promising families, as far as possible, who would be likely to do well and make a good living on the land. It would be also well to take five or six people from the same district and send them to the same place. You should take either people on the same property or adjoining townlands. It would not make much difference whether they were on the same or adjoining townlands. When these tenants are removed, then the farms that they vacate could be added to adjoining holdings so as to make them economic.

47322. If your idea were carried out their associations in the new place would be pretty much the same as they had been?—Yes, and they would be society

to one another, whereas if only one or two men were sent to a strange place they would be lonely for perhaps the rest of their lives.

47323. Sir JOHN COLOMB.—You would select the best people in the congested districts for migration?—Yes; I mean the most active and vigorous.

47324. Then in one sense you would leave the congested districts in a worse position than they were in before?—I don't think so.

47325. What would become of the people who are unfit?—They are unfit only in the matter of age, and if they got an increase of land they would be very much better off than before.

47326. Take two cases—A and B. A is an active young man with a growing family, and B is an old, infirm man. You would remove A and leave B. When B dies what would you do with his holding?—His son, if he had one, might get the place, or his daughter might get married. Some representative of the tenant would occupy the place.

47327. Most Rev. Dr. O'DONNELL.—The family might be weak at the time of the migration, but there might be young people springing up able to look after it?—Yes. The eldest son, as a rule, succeeds the father, and he would settle down on the land when it was made economical.

47328. CHAIRMAN.—You realise that when people are removed from congested holdings to grass lands the operation costs the State a certain amount of money?—Yes.

47329. Naturally it is not unreasonable for the State to look to the advantages which they obtain for the loss of that money?—It is quite reasonable.

47330. The first consideration which I suppose they have to look to is the amount of land made available for distribution among the tenants left on the congested area by the migration of individuals to the grass lands?—Yes.

47331. It is not therefore unreasonable that in selecting men to migrate you would pay a considerable amount of attention to the question whether the man has a large holding, and whether he leaves behind him a considerable plot of land which can be divided among his neighbours?—Of course, if there was such a case that would be so; but so far as I know in this locality generally we have hardly any such. They are, generally speaking, all small tenants. I don't know that in my parish there is a single person with a large farm who would be likely to be removed. If there were such persons I would consider it a good thing to remove good substantial farmers, and then divide their land among the others.

47332. That is the best policy?—Yes, but in this locality generally it is not practicable.

CHAIRMAN.—I think that in so far as the operation of migration has been carried out by the Board that is what they have looked to.

Most Rev. Dr. O'DONNELL.—What your lordship suggests has always been considered very important.

47333. CHAIRMAN.—They always try to get the most substantial men to move, and then divide their land among those who remain?—I think the Board have been acting very wisely in that, but speaking for my own parish, I may say that we have no such men.

47334. If you had an old man with thirty acres and another man with ten acres who was younger, even though the younger man might be in some ways more desirable as a new tenant, at the same time it might be more politic to remove the old man with the thirty acres, because he would relinquish more land, which would be available for distribution among his neighbours?—I am afraid that in that case the big man would require large compensation, because if he had a comfortable place he would not like to remove unless he was very well compensated.

47335. I don't think that in any case there would be compensation to the man leaving, but he would get a better holding?—That would be compensation in substance. If he was getting a better holding, so as to induce him to go, that would be a very good policy.

47336. But in very rare cases only would there be money paid?—But to make it worth his while to leave you should certainly give him a great inducement. In the case of migration of a tenant from a congested area the person who gets the land which he vacates, with the view of making the burden as light as possible on the Government or on the local authority, ought to give some compensation for the land which he gets as an addition to what he had before that.

47337. Most Rev. Dr. O'DONNELL.—You don't think he ought to get a present of it?—No. I would leave it in the hands of the Congested Districts Board or some such body to assess what sum of money should be given to the man who gets the tenant-right of the new holding.

47338. In that case the general loss is much less?—Yes. If a man is removed from a bad holding of, say, 30*s.* or 40*s.* to an economic holding he ought to get some compensation for the small holding which he leaves. The other man should pay that. That would enable him to buy stock. But he should also pay something for his new land—if not money down, something reasonable should be put on to his annuity for the new land that he gets.

47339. But you are dealing with a poverty-stricken district where the people have no means? Where is the man who is left behind to get the means of paying compensation for an addition to his holding?—I think that in that case the man who gets the holding belonging to the migrant, if he had no cash, should get a loan on reasonable terms, at a low rate of interest, or have the annuity increased if the property was purchased out, so as to cover losses largely.

47340. CHAIRMAN.—A man with 25 acres in a poor district with moderate land is asked to go to, say, Roscommon. He is there given a holding of, say, 35 or 40 acres of better land. Fences are made for him and a house is built for him, and when he settles down in a few months he finds himself in much more easy circumstances than he was before. It is not very much to ask that that man should relinquish the tenant-right of the holding that he vacates?—I agree with that.

47341. He gets the tenant-right and the landlord right of the new holding?—Yes, but the question is, what is the annuity of that land; if they add on a big sum of money for the building of fences and house, and so it would be dearly purchased by him.

47342. That all depends on the value of the land?—All the money expended for house, fences, and roads would be put on the incoming tenant.

47343. That man is in a very good position?—So long as it is not unreasonable.

47344. Of course it is for him to say whether he will accept terms or not?—Precisely.

47345. The question is on what terms you are to enlarge the holding of his neighbour in the congested area; if you are giving a good part of that man's land which he is vacating to one of the small holders in the district would it be reasonable to ask that that man should pay a certain fixed sum for the tenant-right?—I think that he should pay something reasonable. I would leave that to be assessed by some public authority, such as the Congested Districts Board, who would be impartial.

47346. Therefore, the fine paid by such a man for the tenant-right of the land given to him to enlarge his holding would help to recoup the State for the loss incurred by migrating the first man?—Yes. I mentioned that myself. I thoroughly agree that that would be reasonable and right; and of course if a man had not the money he ought to get a loan or the money ought to be provided by some addition to his annuity to cover the expenses of the purchase money to the outgoing man. After migration the next most urgent need in this part of the world would be drainage; arterial drainage in the first place. The Congested Districts Board, or some such body, should have power when purchasing lands to have the lands drained. They are lying, in many cases, under water, and the people cannot put in their seeds in proper time, and the result is that no crops can be grown. If the Board, or some such body, were to make drains, or to widen or deepen the rivers, then there would be an outlet for the tenants to drain their own farms into these rivers when they were deepened. What happens generally is that the lands are sodden with water and they cannot be tilled in time. It would therefore be advisable to have some large scheme of arterial drainage carried out and the tenants should then be advised or exhorted to drains their lands into the outlets thus provided. The lands are not giving half their proper produce owing to the want of drainage.

47347. Would not you be disposed to say, speaking generally of agriculture in Ireland, that there is no object which requires more urgently money to be spent on it than drainage?—I agree thoroughly that

Aug. 21, 1907.

Rev. John Kelly.

there is no object on which money could be spent more profitably, and that there is nothing more needed in the country than drainage.

47348. Sir JOHN COLOMB.—Suppose that the Congested Districts Board, or some other public body, made the arterial drain with a view to enabling the small holders to drain their land into it, how do you propose to maintain that work?—I think that there should be some cess or levy made on the district which would cover the cost incurred. Some of the money might be got back in this way, and the money necessary to keep the rivers open should be provided by an assessment on the people in proportion to their valuation.

47349. That is in perpetuity for the maintenance of the arterial works?—Yes.

47350. In cases where a public authority incurred expenses of that nature on arterial drains, with the view of helping tenants to drain into them and the tenants did not take advantage of it, would you have any powers conferred on the public authority to compel them?—There is no such power at present. I think that there should be some power to make all persons contributory according to the valuation of the land that they hold in the area benefited by the drainage.

47351. But you fully recognise that any scheme of necessary arterial drainage must also depend on the contributions of the local authority for its maintenance?—Yes.

47352. And that there should be ample legal powers to enable them to do this work?—Yes.

47353. Mr. O'KELLY.—Don't you think that it is as necessary to keep the rivers clean as well as the roads? Would you give these powers to the County Councils?—I think that the County Councils would be likely to carry out the work efficiently.

47354. CHAIRMAN.—Have you ever thought if arterial drainage was embarked on by the State whether it would be better to leave the work of maintenance and the assessment necessary to carry out the maintenance to the individual County Councils or to have a central Drainage Board whose duty it would be to look after arterial drainage all over the country?—I think it would be better to have a central Board, for the simple reason that there might be counties adjoining and they might not agree on any particular scheme. I would leave it to a central body to carry out the scheme.

47355. If the general principles were settled and administered by a central Board the details might then perhaps be delegated to the County Councils?—Yes; I agree with that. We ought to have the local bodies operating in their own districts. You could have a Board under the central authority to carry out the drainage in its own county.

47356. In your view, if the State were to embark on arterial drainage on a large scale it assumes the formation or creation of a central drainage authority?—Yes. I think also that the Congested Districts Board have certainly done a great deal of good by their various schemes throughout the country. In reference to tree-planting, I think that the country is very bare and bleak for the want of timber, and what little timber we have it being cut down day after day, leaving the country more and more treeless. I think it would be well that the Congested Districts Board should be able to plant some of the waste hillsides, which, at present, bring in nothing. They should have power to drain some of the waste lands, which, at present, produce nothing. This would give some employment, and in addition I look to the benefit that it would bring to the district to have some places planted.

47357. Sir JOHN COLOMB.—Do you mean by waste land land that is in no sense ever used for grazing at all?—Yes, principally.

47358. Is there much land in this neighbourhood that no beasts live on?—There may be some small miserable sheep grazed, but in many places in the congested districts there are hundreds of acres that are not worth a shilling an acre. These are the lands that I refer to particularly. I don't refer to good grass lands but lands which are unprofitable to any person at present, but could be made profitable if planted.

47359. CHAIRMAN.—That is as regards barren moors and mountain lands?—Yes. The Board would also do well to encourage proprietors of lands which they buy to plant round their own houses. This would be a sort of object lesson to them, and they would plant around their holdings then to give shelter to cattle and crops.

47360. Do you really think that they would consent to do that?—I think they would; at least if not all I would say the great majority of them.

47361. I was interested to hear yesterday from the nuns at Foxford that for one or two years they had distributed among the people whom they look after a great number of trees. In one year they distributed over 12,000 trees to these people, and their experience was that the people would not plant in belts or clumps, and that they insisted on planting in rows or single file, one after the other, in order to save the land?—Of course, if they have only a small quantity of land they would not like taking much of it, as they would not have much profit coming in; but where they had a larger quantity of land, or had other means, the influence of public men and public bodies could be exercised to induce them to plant shelter belts. All might not be induced to plant these belts, but a great majority might.

47362. Sir JOHN COLOMB.—Have you observed, in a storm-swept country like the West of Ireland, in order to get trees to form a shelter belt you really must have a width of about seventy yards. There is really no use in a storm-swept country in attempting to make a shelter belt with a width very much less. Have you noticed that?—I have not. Do you refer to a seaboard or to an inland country?

47363. I refer to a country in an exposed situation, exposed to the full force of the winds from the ocean?—We have plenty of examples, such as Dr. Pratt's place, where the trees are splendid.

47364. These belts are of considerable width?—Even where they are not planted in belts I know that they grow very well.

47365. Mr. SUTHERLAND.—Single trees will grow?—Single trees will grow. It is very general to find them in places where they have only a single row around cottages and gardens. Even in my own place they grow very well.

47366. CHAIRMAN.—Have you ever considered what authority might be best to encourage tree planting?—Really, I think that the Congested Districts Board is the best. It is the one that has given the most satisfaction. I am a member of the County Council Committee, and I don't think that they have been doing their work as well as they might.

47367. Do you think that the Parish Committees might do something?—They are doing a great deal, but I don't think that they would be able to undertake the work of tree planting.

47368. Not on a small scale like that, around holdings?—If they got some money they would certainly do some good.

47369. If you want to encourage tree planting on the holdings is it not essential that you should have some body to supervise it who would be in constant touch with the people who plant the trees?—It would be essential to have somebody who would show the people what to do. They don't know exactly, as a rule, how to plant trees. The County Council Committee have such a man, who goes round and shows people how to plan their trees—Mr. Gordon. He is doing very good work, too. He has certain districts allotted to him by the Committee, and when they are notified by persons who want to get his instruction he is there to give it, and he will come out again by and by to see how he is getting on. The whole thing, however, comes to a question of getting more money. If we got some of the surplus taxation we should be able to carry out some of these things very well.

47370. The Agricultural Committee of the County Council could now, if they chose, adopt tree planting as part of their schemes?—Yes, to the detriment of some other equally useful, or perhaps more useful, project. Their funds are limited, and, like other people, they must cut their cloth according to their measure. If they had more money they could do more good.

47371. If they don't go in for it now that assumes that other things, in their opinion, are more important than tree planting?—They are giving assistance as far as they can. They have a gentleman appointed and paid, whose duty it is to go through the country, and show the people how to manage garden plots and forestry.

47372. The County Committee operates over a very large area?—The whole county.

47373. Is it not essential if this is to be done that you should concentrate your efforts in rather smaller centres. Would not the Parish Committee be a more useful and convenient body to bring encouragement to bear on these people than a body of people like the County Committee, whose duty it is to look after a very large and straggling area, and who, perhaps, have not the time and opportunities?—I agree thoroughly with you, that they would know more the wants of the people, and be able to show more interest in it.

47374. Most Rev. Dr. O'Donnell.—If you had a special grant for the purpose?—Yes; to enable them to carry it out.

47375. Sir Francis Mowatt.—Might not the growth of shelter belts be made one of the subjects which Parish Committees encourage by a grant?—Yes. I think it would be very advisable to have this done.

47376. Mr. Kavanagh.—The County Council can raise money at the present moment for tree planting?—I think they are limited.

47377. A halfpenny in the £?—A halfpenny in the £ for agricultural and a halfpenny for technical instruction; but a penny is the limit for both.

47378. But for tree planting they can raise a halfpenny in the £?—I am not aware. I know they are limited to a penny in the £.

Mr. Kavanagh.—Yes. It represents such a small sum that it is not worth talking about.

47380. Mr. Sutherland.—Do you think that the Congested Districts Board would do the planting?—They might encourage the people by providing trees at reduced prices. They might buy them by the gross, and in this way give the people some encouragement.

47381. The encouragement might be pecuniary?—Principally, and by advice and instruction.

47382. Those trees would have to be fenced?—Yes; to prevent cattle from coming and rooting them up.

47383. The Congested Districts Board in putting land through their hands would probably adapt it for the tenants before handing it over. Would not it be better to have the planting done before the land is handed over?—I don't think so. If the tenant did it himself he would probably do it much cheaper. There would be an excessive labour bill if it were to be planted first.

47384. Chairman.—Those two things are quite separate. Planting on a large scale in a mountain district can obviously be done only by the Government?—Quite so.

47385. Then comes the question of planting small shelter belts around the houses?—Yes.

47386. That might be done by the people themselves with the encouragement of a grant through the Parish Committee?—Yes. That is my idea.

47387. Most Rev. Dr. O'Donnell.—If these people were given encouragement by being granted a certain proportion of the trees, do you think that they would themselves comply with any necessary conditions as to putting up fences round the little belts?—They would do it just as they do under the Parish Committee Schemes, where they get a certain proportion of the expenditure on outhouses, and so forth, and they comply with all the conditions. In the same way, I am sure, they would comply with all the conditions in reference to getting the trees, and would do the fencing and everything else that would be necessary.

47388. They would comply with the necessary conditions to prevent trespass?—I am sure they would. I think it would be also well if the Congested Districts Board could make loans. Even when tenants work their holdings largely, still, generally, belts will be left over, and the tenants might not be able to make the necessary improvements. They are generally obliged to go to England for work. I think if they could be employed at home on their own holdings it would be much more profitable in the end. Of course, they earn more directly in England, but that is very often little enough when they get home, because their crops are not properly looked after. The father goes to England, leaving the wife and little children to look after fuel and so forth. Those children should be at school. The result is that very often the farms or holdings are neglected. If these poor men could get loans spread over a number of years on the security of their little holdings, they could then remain at home and earn more money, and at the same time make their holdings more valuable and more economic. A lot of valuable work, such as reclamation, could be done in this way by tenants if they got loans through the Congested Districts Board or some such body. As regards industries, we have no such thing in this part of the world, and if something could be done to establish any industries it would have a good effect in relieving congestion

47389. Have you no lace-making in this place?—We have not. As regards transit facilities, we have no railway nearer than Ballina. We are hoping that perhaps a branch line will be made to this part of the world. If that were done buyers would come here and people would get better prices for their cattle.

47390. Chairman.—As a matter of fact, the average price of cattle in the Belmullet area compares very favourably with the prices in the districts towards Sligo?—I should be surprised to hear that, because I was in Sligo for a long time. I know that the people do not get the prices that they should get for their cattle.

47391. Are you sure that the prices in places like Belmullet, away from the railway, compare unfavourably?—Yes. From the hearsay knowledge that I have of the place, I believe it is very unlikely that they would get by any chance a price for their produce equal to that obtained at Ballina. It is more than 40 English miles to Ballina.

47392. I heard it stated by the Midland Great Western people before a Committee of the House of Commons?—I am afraid they were interested in it.

47393. They were, but it was not controverted by the other side?—Probably they did not think it necessary; it appeared to be so absurd to imagine that persons can walk cattle from Belmullet to Ballina, forty miles away, without losing money through deterioration. Many poor people who have no cattle to sell may have a pig to sell.

47394. Sir John Colomb.—I think it would be true of pigs, but cattle are rather improved by having less knocking about in a railway wagon and by being driven?—I don't think they would be improved by either one or the other.

47395. I agree with you as to pigs, but not as to cattle?—I never heard that they were improved by being driven.

47396. Railways may not raise the price of cattle in a district. In the case of pigs, butter, and those other commodities, they do, but cattle really arrive in better condition by walking than if knocked about in a railway train?—People who buy cattle here bring them to Meath. If they walked them to Meath they would find out their mistake. I would like to say a word or two with reference to congestion in the parish of Adrigool, from which I come. There are three electoral divisions, one in the Westport Union, and two in the Castlebar Union, and one small section of a few small townlands in the Ballina Union. In the three divisions belonging to the Castlebar and Westport Unions the people are in a state of great congestion. There are not more than 12 or 13 persons in the three divisions over £15 valuation. The great majority are under £5. A few are between £5 and £10. As regards the quality of the land, generally speaking, it is extremely poor. Some of it is wet and moory land, and the other remaining part is bare, rocky, cold land, capable of being improved and reclaimed in many cases if the people had capital and encouragement to do it. As regards lands to which people might be removed, I find that in the Crossmolina South division, in which we are now sitting, between landlords and graziers there are twelve of them who hold about 2,000 acres.

47397. Does that include demesnes?—No. I left them out of the calculation. The valuation is £1,049. There are two men with valuations of £302 and £242. In North Crossmolina there are seven persons, between landlords and graziers, with 2,563 acres of a gross value of £890. This is exclusive of the demesnes. These lands, I think, ought be purchased by the State through some board or body and the people from the congested districts put on to those lands, giving the people who hold them a reasonable price.

Aug. 21, 1907.

Colonel W. A. G. Saunders-Knox-Gore examined.

Colonel W A. G. Saunders-Knox-Gore.

47398. CHAIRMAN.—You have been appointed by the Irish Landowners' Convention to give evidence before us?—Yes. I would suggest that the constitution of the Congested Districts Board should be altered by vesting in the Board power to act from day to day as in the case of the Estates Commissioners, without resorting to the trouble and delay of convening meetings.

47399. Most Rev. Dr. O'DONNELL.—Have you had any personal experience?—No, but I have been told that delay is caused owing to its being necessary to wait for the meetings.

47400. CHAIRMAN.—In order to meet that point would you be disposed to think it would be advantageous to have certain paid members of the Board who would be continually on the spot and continually carrying on the administration of the Board?—Generally I am averse to paid officials, but I believe it could be managed by committees of the Board.

47401. When you say you are averse to paid people you must remember that it is difficult always to secure such constant and regular attendance of unpaid people as of paid people?—Yes, but Ireland is very much overdone with paid officials up to the present that one does not like to increase them if one can do without them.

47402. Most Rev. Dr. O'DONNELL.—Unless paid officials were used as members?—That might be done.

47403. CHAIRMAN.—Would it meet your view. Supposing the Board were to meet occasionally and pass certain principles of administration that there should be officials paid for carrying out from month to month the decisions and soforth arrived at by the Board, with greater powers than are now possessed by their officers?—Yes. I think that would be a better plan. I approve of the Congested Districts Board, and think the Board should be maintained as an independent body distinct from the Estates Commissioners. Large areas of grass lands are available in the County of Mayo on estates, and I propose to hand in schedules* showing the different estates upon which a substantial area of good grass land can be obtained on equitable terms. I have authority from the owners of these lands to say that they are prepared to sell these grazing lands, either to the Estates Commissioners or to the Congested Districts Board on fair terms, simultaneously with the sale of their tenanted lands, and this being so I suggest that there is no reason whatever for obtaining compulsory powers. It being admitted that the owners are prepared to sell these grass lands on equitable terms and conditions, it is suggested that the only object of compulsory powers would be to enable purchasers to acquire the lands at prices which would be unfair to the owner.

47404. That paragraph assumes that in your opinion the only object of compulsory powers is to enable some purchasing authority to acquire land below its fair value?—Yes.

47405. I think that that is assuming a great deal. Suppose that it is necessary for the purpose of migration that you should obtain grass land in a particular place, as near as possible to the congested area that you wanted to relieve, and suppose that a particular landlord was disposed to be unreasonable is it your answer to us that there is plenty of land in the district to be acquired from reasonable landlords at a fair rate?—My point is more on the question of price. If he was offered a fair price he would sell.

47406. Suppose you find that in a particular spot which you very much want to get for the purpose of migration there is an unreasonable landlord who declines to sell at a fair price?—Then he should be treated in the same way as is adopted in the case of land taken for railways.

47407. Then I understand that you don't object to the principle of compulsion where it can be shown that there is a necessity to acquire the land?—But I should want very strong proof of the necessity; very strong proof that the land is wanted in this particular place.

47408. The necessity surely may be taken for granted by reason of the fact that it is obviously necessary to obtain grass land as near as you possibly can to the congested areas that you wish to relieve?—But there might be a dozen different people's land that you might take. One person's might be equally as good as another's.

47409. Take a case of that sort: is it fair to the dozen reasonable people that their land should be taken and that the thirteenth, who happens to be unreasonable, should escape because he happens to be unreasonable?—That is a very extreme case.

47410. It is your own case—the twelve reasonable people?—I think there might be a dozen places that would suit and you would very likely find some reasonable people who will give it without compulsion.

47411. If you want the block on which the thirteen landlords own land and twelve of them are reasonable and the thirteenth of them is unreasonable, why should you take the land from the twelve reasonable men and leave the unreasonable man alone?—I agree with you. I have often heard in the case of railways of one man obstructing them for a long time, and he has to give way, but not until he is properly compensated.

47412. We are not talking about price now. We are talking only of the necessity for compulsory powers?—It would be not only fair, but liberal

47413. Mr. SUTHERLAND.—Liberal to one side?—If a thing is taken from a man against his will it has always been usual. I believe it is the law. Railway cases are the most numerous class of which we have examples.

47414. You are making a bargain between two parties. If you are too liberal to one side you are not liberal to the other?—My evidence is on that.

47415. CHAIRMAN.—Don't let us discuss price now. We are merely discussing the principle of compulsion. I take it from what you have said that so long as the price is fair you have no objection to the principle of compulsion where the State can show the necessity for obtaining the land?—I think the necessity should be very clearly shown.

47416. The necessity in this case is shown by the fact that it is obviously necessary to get land as near as possible to the area you wish to relieve?—Then I think that compulsion should be the last resort.

47417. Of course if you can get it by voluntary means, obviously it is more advantageous to all parties?—I say that it can be got by voluntary means.

47418. Sir JOHN COLOMB.—Am I right in saying that you start on the principle that landlords generally would be ready to sell if they get a fair price, and that the so-called unreasonable landlord will be quite a rarity?—I think so.

47419. CHAIRMAN.—But at the same time you do not deny that it might be necessary that the State should have in the background a reserve power to obtain land compulsorily where a man was unreasonable in the exceptional cases to which Sir John refers?—Yes.

47420. Mr. SUTHERLAND.—I may further say that it is never contemplated that compulsory powers should be otherwise than his lordship has stated. First of all there is the chance of coming to terms?—I am of opinion that it will not be for the benefit of the country to take up all the grass lands and divide them into small holdings, as the effect of same will be to destroy the great grazing industry which has been carried on with profit to the individual, and with great advantage to the smaller tenants who dispose of their stores to the large graziers, and I am also of opinion that there are some ancient grass lands, and other grazing farms of very rich character which it would be waste to break up on the one hand, and which would not be suitable for tillage upon the other. At the same time, if the principle receives approval of breaking up these lands, and allocating them in the way proposed, the majority of the owners in the county of Mayo will be quite content to sell their grazing lands at fair prices, simultaneously with the sale of their untenanted lands. As to what is the meaning to be put upon the words "fair prices," I suggest that a vendor should receive such a sum for tenanted and untenanted land as, when invested in securities yielding 3½ per cent. will bring in his net income.

47421. Most Rev. Dr. O'DONNELL.—You would not suggest 3¾ per cent.?—I think that 3½ is fair.

47422. CHAIRMAN.—You mean net income after making deductions?—Yes, agency expenses, and on the grazing lands there would be taxes.

*See p. 192.

47423. Sir JOHN COLOMB.—And also you mean an erage net income over a period of years?—Yes.

47424. Have you fixed in your mind the number years that would be reasonable?—Fifteen or enty years.

47425. CHAIRMAN.—Do you think that if a man re to purchase a good grass holding of forty acres a price which would give to the landlord the net come which he had enjoyed, that man would start der conditions which were hopeful for the future? you think that the man with forty acres odd ll pay taxes and make a living?—My answer is at the graziers who are hard-headed men of busiss do it, and continue to do so.

47426. Is the secret of their success the fact that ey farm land on a bigger scale than would be ssible for a man having a forty-acre holding to and to succeed on the same lines that the grazier th the 300 acres succeeds on?—I think it is easier r the large than for the small man to succeed.

47427. Most Rev. Dr. O'DONNELL.—At grazing?—s.

47428. But the man with the forty-acre farm might d it profitable to use it on the mixed system?—ite so.

47429. One might fail as a grazier and succeed as mixed tillage farmer?—It is possible, but the ners of most of these farms use them for grazing, ich they consider the most profitable method. I n only give you what one sees done every day.

47430. Don't you consider that under an improved stem of tillage it would be very much better to ve second-class land under a mixed system than have it grazed?—The climate is very much against llage. It does not affect grazing very much.

47431. Sir JOHN COLOMB.—Is it not also very much question of the nature of the land?—Yes. Some these grazing farms are suitable, and some are not itable for tillage.

47432. Then you are of opinion that the breaking of all the grass lands, assuming they are absorbed d cut up, would adversely affect the interests of the all peasant proprietors of Ireland?—Yes, that is y idea, and I think the idea of the majority of the ople.

47433. Most Rev. Dr. O'DONNELL.—It is only the ry good land that you wish to see not broken up?—me of the land is absolutely unsuitable for breakg up. Whether the other would pay or not is nother question.

47434. Sir FRANCIS MOWATT.—The part that is not itable is only a very minute proportion?—It is t a very large proportion.

47435. It would not materially affect the whole?—ne breaking up of the grazing generally would have very bad effect.

47436. CHAIRMAN.—Would you say that there are any holdings of the kind that comprise a certain nount of rich grass land which is unsuitable for eaking up, and at the same time a certain amount inferior grass land which it would be advantageous till?—There is some land in this country that on't stand continuous grazing.

47437. Is not it a fact, speaking generally, that present in Ireland there is too much under grass?—I would not say that except for the sake of doing ese improvements, but from the point of view of aking the most of the land a great deal of it ought be kept in grass, but I think it very desirable at these small holdings should be enlarged.

47438. Speaking entirely from the economic point view, would not you say that there is now in eland, in the West of Ireland especially, a great al of land under grass which ought not to be nder grass at all?—I look at it in this way, that e people who have it keep it under grass, and if ey thought it would pay them better to till it ey would do so.

47439. Is not that because of the difficulty of get-ng labour?—I don't think it is. The climate to a reat extent affects it.

47440. Is it because in the first place there is a ifficulty in getting labour, and in the second place at there is gradually developing a general disposi-on to go in for the easier form of farming?—These eople are men of business, minding their own busi-ess, and they know their own business best.

47441. Most Rev. Dr. O'DONNELL.—Is not it a fact at there has not been any proper system of agricul-ural training for farmers of the country here?—It as not been very good. Of late it has been taken up by the Congested Districts Board and the County Councils.

47442. I don't understand very much about Belgium or any other countries, but if we had introduced into Ireland a system like what they have there it would be profitable to have a great deal of tillage carried out?—Would our climate suit it?

47443. That would mean we should also change very much the crops we grow. Potatoes would diminish, and root crops take their place?—There are many people who will give you better evidence on that. I am not an agricultural expert.

47444. CHAIRMAN.—It is rather a strong thing for anybody to say that they are certain that the present form of agriculture in Ireland, the grazing form, is the best without being able to test a system of mixed farming by practical experience?—The people who advocate breaking up the grazing farms are merely advancing a theory. They may be right or they may be wrong.

47445. It is a question of theory on both sides?—Yes. One may be right and the other wrong.

47446. Then the people who come forward and say that mixed farming is the most suitable form of agriculture in Ireland at any rate must be listened to with respect?—I have no objection to their being listened to.

47447. Most Rev. Dr. O'DONNELL.—Would not you consider if you have been through some of the Ulster counties that there is even in Ireland a practical demonstration of what can be made under a system of mixed tillage on average land?—I don't really know very much of that. I have only passed through the northern counties. I know very little about them. One passes through in trains and one sees these things, but that is all I know about it.

47448. Mr. O'KELLY.—The landlords would be willing to sell their occupied land, I understand you to say, if they received a sum which when invested at 3½ per cent. would yield them their net income?—Yes.

47449. I suppose that the best way to ascertain the net income is by going over the books of the property?—I should think so.

47450. Do you think that there would be any general disinclination on the part of the landlords in this part of the country in negotiating with their tenants to submit their books for inspection?—I think there would be no objection if they were told that they would get their net income, but they would not do it if there was going to be nothing more about it.

47451. If the Estates Commissioners approached the landlord and said, "We are willing to negotiate on the basis of a sum, which if invested at 3½ per cent., would give you your net income"?—If they made a distinct offer to do that you would get heaps of landlords to give their books and be delighted to take the offer.

47452. Do you know of any case in the country where that was asked and where it was refused?—I do not.

47453. Sir JOHN COLOMB.—I understand your position on that question to be this, that there would be no objection on the part of the landlords to producing their books when the definite offer was made to give them a price which when invested will yield as an ultimate result the net income shown by their books?—Yes.

47454. What the landlords would certainly object to would be to show their books in the case of negotiations in which there was not a firm offer?—That is exactly what I meant to say. If a *bona fide* offer was made there would be no objection to producing the books.

47455. If the authority had the power of giving this money?—Yes.

47456. Mr. O'KELLY.—Take the Estates Commissioners or the Congested Districts Board if you like, don't you think that if they approached the landlord with a view of arriving at a settlement they might presume a definite offer?—I think they would require an absolutely definite offer. They would produce their books, but I don't think they would care to have their private affairs made public.

47457. I take it that they would not be made public by such a body as the Congested Districts Board or the Estates Commissioners and that the whole arrangement would be confidential?—I can only give you my opinion. If there was a definite offer to give them their net income if they would prove it there would be no objection to show their books.

Aug. 21, 1907.

Colonel W. A. G. Saunders-Knox-Gore.

47458. I am not speaking of untenanted land, but only of the occupied portion?—I am speaking of both together.

47459. Let me separate the two for a moment. Suppose the landlord was offered for the tenanted portion of his property a sum that if invested at 3½ per cent. would produce his net income, would he in that case be willing to submit his books for the inspection of the Estates Commissioners or the Congested Districts Board as the case may be?—My opinion is that he would.

47460. Mr. KAVANAGH.—If he considered it a genuine offer?—If it was a genuine offer, and he only had to prove his net income, and the offer was enforceable against the proposing purchaser and my definition of net income was accepted as a basis of price.

47461. Sir JOHN COLOMB.—I understand your position to be this, that in giving that opinion you are assuming that of course it would not be a case of merely taking the untenanted land from the landlord, but his property?—I have said both together, simultaneously.

47462. Mr. O'KELLY.—I am not speaking of untenanted land, which is entirely a different question altogether and one that presents more difficulties than the other case does, but I am speaking entirely of tenanted land. I assume for the moment that there is absolutely no grazing land of any sort on the property?—I think they would. That is my opinion.

47463. Sir JOHN COLOMB.—You merely put that forward as your opinion?—Yes. I have not any authority for that.

47464. Mr. O'KELLY.—Suppose I was to include both. Would you think if you gave an affirmative answer that that would represent the general view of the Landlords' Convention?—I cannot say as to the Landowners' Convention, but I would say so as regards most landlords of my acquaintance. As to the complaint made by some witnesses examined that the landlords have refused to sell grass lands, I am of opinion that in nearly every instance of this kind the refusal was due to the insufficiency of the offer. It is unfortunate that there has not been some fixed principle upon which fair prices should be determined, but I recognise that the circumstances of different districts and different estates vary so much that it is probably impossible to frame a general rule that would work fairly in all, or even in most cases. Moreover, if owners were compelled to sell untenanted land apart from their tenanted land a much higher price ought to be paid for it, and their dual interest in it, as both owner and occupier, should be valued and paid for. Mr. Doran's method seems to be very fair in principle, but in practice it has not worked out satisfactorily to the landlords. His principle appears to be to estimate the fair rent of a given area of grass land, and then to allow the landlord 27 years' purchase upon this estimate. The danger to the vendor here is that the estimated fair rent may be insufficient, and in every case it seems to be substantially below the net letting value of the grazing land. This is abundantly clear from the evidence that he has given. If, for such purpose, it be desirable to take up certain areas of grass lands, I suggest, where the owner is willing to acquiesce, he should at least be indemnified against any loss, for the reason that he is yielding, though not under compulsion, at all events to exigency which amounts to the same, and hitherto it has been the practice and the law to allow a man who is not anxious to sell or part with his property the full equivalent, and something extra varying from 10 to 20 per cent.

47465. CHAIRMAN.—It is not the law surely?—It is the custom. That has made it almost law, if it is not absolutely the law.

47466. Sir JOHN COLOMB.—The 10 per cent. is under the Lands Clauses Act, but in the case of railways it sometimes runs to 20 per cent.; is that what you mean?—Yes.

47467. Mr. SUTHERLAND.—That is in the case of severance. There would be no severance here at all?—That is the compensation for taking it against the owner's will.

47468. CHAIRMAN.—Would not you be disposed to think that an Irish landlord who had his capital transferred from Irish land to what is called a gilt-edged security and enjoyed the same amount of income that he had before would be in a very satisfactory position, in such a satisfactory position in fact that it would be unreasonable to ask for an additional 10 per cent. for disturbance?—I don't actually ask for it. I am only saying that he is getting less than has been the practice in other cases.

47469. I understand that in England, where land is taken for railways, and is bought out by arbitration, that 10 per cent. is added for severance and disturbance; but does it not seem reasonable to you that in view of the uncertainty of affairs upon a great many Irish estates the 10 per cent. might be waived in view of the fact that the Irish landlord finds his capital invested in a gilt-edged security and not Irish land?—I think that Irish land is a very good security.

47470. Do you consider it a gilt-edged security in view of the history of the past?—The rents are very regularly paid.

47471. It has not been always so on every estate?—On a great many estates they have been. Rents have been very much reduced of late years, and those are regularly paid.

47472. If you had your choice as to whether you would have an estate returning you £1,000 a year, situated in Ireland or in England, I don't suppose that you would hesitate as to which you would choose?—Nobody likes to have his income docked.

47473. Suppose you had the same income; suppose you had your choice as to whether you had a property bringing in £1,000 a year, situated in a good English county or in a western Irish county, which would you choose. Do you mean solemnly to tell the Commission that you would be as willing to accept a property in the West of Ireland to bring in £1,000 a year as a property in an English county?—I don't know much about English rents.

47474. Sir FRANCIS MOWATT.—All the witness suggests is that where the owner is willing to acquiesce he should be at least indemnified against any loss?—That is what I say. I am not asking for the 10 per cent. I merely mention that as a thing that is given elsewhere, so that this is a worse bargain.

47474A. Most Rev. Dr. O'DONNELL.—Don't you think that the relief from the uncertainties of the future is full compensation for the 10 per cent. I will call attention to one obvious uncertainty. If the wet weather had continued this year as it was before the middle of July, and if we had not had a good fortnight, rents would not be paid this year as regularly as they had been in the past?—I quite understand your point.

47475. Then, suppose the social trouble recurred, and was widespread, trouble such as has existed in Roscommon, don't you think that that would affect largely the income from Irish land? As things are in Ireland is not rent subject to these various contingencies, and consequently is not it full compensation to you if you get the net income with full security in the future?—That is what I am asking, but I should get that at least. You are going beyond that.

47476. No, but I am only anxious to point out that if you get that you are not worse done for than those who get 10 per cent. compensation for land that is taken in England.

47477. Sir FRANCIS MOWATT.—That question should be supplemented by one consideration; that is free importation of foreign stock or even the supplying of increased quantities of meat from the Argentine might greatly affect the value of stores, and therefore surely would greatly affect the value of grazing?—That is speculative.

47478. We have had it so frequently put before us on both sides that I should think it is one of the things that you could hardly banish from your mind?—If I wish to sell stocks now I sell them at their present market price and not at what they may be in a few years, owing to the disturbance of the money market.

47479. But the question of the Chairman was whether there was not a greater risk in Irish land than in the best gilt-edged securities to-day?—Nobody likes to be turned out of a property which has been in his family for many years.

47480. Mr. SUTHERLAND.—How do you account for the depreciation in Irish land stock?—That I cannot tell you. It is a Government stock.

47481. Sir JOHN COLOMB.—Sir Francis Mowatt has pointed out to you the contingencies averse to holding Irish land, and Mr. Sutherland has alluded to the fall in land stock. Is there not another set-off to Canadian cattle, and that is that the recent fall in what are called gilt-edged securities may continue, and although the income may remain the

apital value of the landed property is depreciated?—The landlord's stock may fall. Then on the other hand it is always possible that the price of land may go up. Some people believe in fair trade as against what is called free trade. That may come in, and it would make a very different business. Personally, I am myself a fair trader.

47482. Mr. O'Kelly.—Rents have been paid regularly?—Yes.

47483. They have been reduced by from 20 to 40 per cent.?—Yes.

47484. They can hardly be regarded as equivalent to a gilt-edged security when they are subject to a third reduction at the end of the second-term of fifteen years?—The same applies to securities.

47485. Chairman.—Irish Land Stock has got nothing to do with Irish land—that is, that the payment of interest on the stock has got nothing to do with the value of Irish land?—It has not.

47486. Sir Francis Mowatt.—The ultimate security is the State?—Yes.

47487. Most Rev. Dr. O'Donnell.—I am sure that you would allow that the point put by Mr. O'Kelly is also a factor to be considered. There might be a third-term reduction of rent?—I quite agree with you. Still, if you make a calculation as to the sale of land now you will expect your present net income, so as not to be at a loss.

47488. Sir Francis Mowatt.—That is really all that you suggest?—I only quote this to show that we are not being better treated than other people. In no sense can it be said that the grazing lands are insecure property, as I am in a position to say, after inquiring into the matter, that grass rents in the County of Mayo have been at least maintained for a period of many years; while at the present time there is a better demand for grass land than for some years back; so much so, that instances can be given of enhanced prices paid for grazing lands. I am of opinion that, if it can be shown that for a period of fifteen or twenty years a particular rent has been paid for a grass farm, it is strong evidence of the letting value, and affords strong reason for holding that the landlord should be compensated for such land on the basis of the income which he has received, and not on a theoretical income, based on the prophecies of the Estates Commissioners as to the future value of land. Father O'Hara suggests in one part of his evidence that a landlord in Connaught should receive 20 per cent. bonus upon the price of his estate, and in another that he should receive a sum which, when invested at 4 per cent. would give him his net income. If these two suggestions were carried out together I am in a position to say the great majority of owners in Mayo would be quite willing to sell their grazing lands (simultaneously with their tenanted lands), save and except their demesnes and any purely home farms. My reason for saying that is that with the bonus the 4 per cent. would make it nearly as much as the 4½ per cent. in the other case. The prices, however, which have been offered, and indeed paid for grass lands, will not yield to the owners the estimate put upon them by Father O'Hara.

47489. Most Rev. Dr. O'Donnell.—You refer to Mr. Doran's standard. Do you know, as a matter of fact, in the purchases that Mr. Doran is suggesting there has been no fixed number of years adhered to?—They work out at twenty-seven years.

47490. That is an average?—Yes.

47491. But there is nothing definite that is fixed?—It really came to that.

47492. I don't think you will find that Mr. Doran suggested that any definite number of years' purchase should be applied in every case in the event of compulsion?—No; but I think that is what it worked out at. It has been also suggested that Mayo rents are not well secured, or at all events that the security is not of high class, and in this connection I would like to say that there is strong reason for saying that Mayo estates afford security of the highest character of their kind, and for the following reasons: 1. From enquiry made I am in a position to say that on most estates in Mayo, tenanted and grazing land, a year's rent has been paid regularly within the year, and this for the last twenty years. That is a point that I have been talking about already.

47493. Sir Francis Mowatt.—The insecurity lies in the possibility of some estates not paying. You don't say all estates, but most estates. That is the difference between a gilt-edged security and a certain amount of speculation?—Possibly.

47494. Chairman.—You would not go so far as to say that the rent for the last twenty years has been paid off the holding itself?—Not in the case of the small holdings held by harvestmen, who earn money in England.

47495. Most Rev. Dr. O'Donnell.—Even in some of the cases where they don't go harvesting I suppose it is true that a great proportion of the rent is paid by remittances from America?—I don't know that at all. I would not say that.

47496. At any rate, wherever it comes from, it is not derived from the produce of the land?—I think in the greater number of cases that it is. I don't say so in the case of these very small holdings.

47497. What we call the uneconomic holdings?—Yes.

47498. So it is true to say that in the great majority of those cases rent is not paid from the produce of the holding?—It would be impossible to pay it from some of those.

47499. Therefore the security for the payment of the rent in future is based upon something quite apart from the value of the land; if anything happened to the person who occupied that holding, if he were prevented from harvesting in England, if it happened that he had no relations in America, he would find it exceedingly difficult to pay his rent?—It is possible. The reductions of rent under the Land Act of 1881 and the amending Acts, in the County of Mayo compare favourably with the reductions in other counties supposed to be in better circumstances, and I think I am accurate when I say that only two or three counties in Ireland have a smaller average of rent reductions than Mayo. This shows that the lands were not rack-rented, and further it is abundantly evident from the prices which have been realised at sales of small holdings that the tenants' interest in these is of very substantial value, fetching from ten to twenty years' purchase. The value of the tenants' interest makes the rent absolutely secure, and the Treasury acquire the security of the tenants' interest as well as of the landlord's when advancing the purchase money, so that it cannot be said they are lending upon a poor security. The Congested Districts Board have done a great deal for the country, and their good work is evidenced in many districts, and I congratulate Mr. Doran upon the good work that he has done; but I am of opinion he has not given sufficient effect to the reasons which go in favour of the contention that the landlord should be compensated upon his net income, and not upon the basis of his estimated fair rent. It appears from his evidence that the average prices paid for first term and yearly tenancies since the passing of the Act of 1903 is 18½ years' purchase, and on second term 21 years' purchase, while these figures cover the arrears of rent which were due to the landlord at the date of the sale.

47500. That is under the voluntary system?—That is quite true.

47501. Chairman.—That is a considerable increase on the average before 1903. He showed that on the same table?—Yes, but he was dealing with people who were very much involved, and who were obliged to sell.

47502. He gave us three periods—prior to 1896, between 1896 and 1903, and since 1903, and there was an increase in each of these?—I am only talking of the 1903 period.

Most Rev. Dr. O'Donnell.—I don't know why it is said that only landlords who were involved sold before 1903. It would look as if owners of all classes of land sold before 1903. In the County Donegal the Duke of Abercorn and others sold.

Chairman.—It has not been said that only involved landlords sold before 1903, but it has been said, I daresay, by responsible people in public, that there were two great classes who sold before 1903—involved landlords and landlords who had sources of wealth in other countries, and who could afford to sell at a loss.

Most Rev. Dr. O'Donnell.—But the owners to whom I refer have retained quite large sections of their estates.

Sir John Colomb.—It was stated in Parliament in introducing the 1903 Bill as the reason why

Aug. 21, 1907.

Colonel W. A. G. Saunders-Knox-Gore.

it was necessary to have new legislation and new inducements to sell that the number of broken-down landlords had been exhausted, and that they were now dealing with more or less solvent landlords, who had to be induced by offering them new inducements to sell their land.

Most Rev. Dr. O'Donnell.—I believe that you are quite right in saying that that argument was used. Statesmen make the most of such arguments to carry their measures.

47508. Chairman.—At any rate, there is no doubt the fact remains that the applications for purchase were decreasing before 1903?—Yes. Taking these figures as a basis, it is abundantly clear that they are insufficient to yield the landlord anything like his present rent. I have made a calculation here taking a certain rent—first term at 18½ years and second term at 21 years, allowing half the bonus to clear costs—it is about half the bonus, as a rule, on large estates; on small estates it is rather more—his loss would be £27 10*s.* on every £100 of income at that rate.

47509. Sir John Colomb.—Have you had much experience of sale transactions?—No. There have not been many sales in this part of the country.

47510. Because you surprise me in what you say about the bonus. To my knowledge, practically the bonus is eaten into altogether by the expenses of sale?—In the small ones, but I am told that in the large cases half the bonus is generally taken by the expenses, but in the case of small sales they absorb the entire bonus. The greater the scale on which the sale is carried out the more cheaply it can be done. Some of the most important witnesses seem to think that the problem which it is desired to solve is chiefly confined to Connaught, and if this be so there is some reason for the suggestion that an enhanced bonus should be assigned to the landlords in this province, if they are to be made the special object of attack in order to capture their grass lands. Either this or else the attention of the Estates Commissioners and the Congested Districts Board should be directed to the propriety of going elsewhere in Ireland for at least some of the land required to satisfy migrants from Connaught.

47511. Chairman.—I must protest against the particular phraseology in which you refer to landlords being made the special object of attack. You would not call it attack to suggest that the landlord should be asked to sell his grass lands at a price that would give him his net income?—Not on those terms, in which case I would be very pleased to alter the words if they do not meet with your approval. I believe Mr. Doran and Sir A. MacDonnell to be in favour of this plan. It is unsatisfactory and unprecedented that the purchaser should be the person to fix the price, and this appears to be in practice the result of prior dealings.

47512. Sir Francis Mowatt.—Whom would you consider to be the purchaser in this case?—I am speaking chiefly of the Estates Commissioners.

47513. Most Rev. Dr. O'Donnell.—You would not find anything objectionable in that under a voluntary arrangement?—These people are people absolutely driven to it; but if it is really a voluntary arrangement and they come to bargain together it is not compulsion. It would be only fair to have a tribunal set up for the determination of such an important question as the value of a landlord's estate. I would suggest that the tribunal should be composed of the most independent and impartial men in the country, and that they should hear evidence on both sides, and fix a price based on such evidence according as it impresses them. The highest tribunal of the land would not suffer in dignity by taking upon itself this jurisdiction, and I can suggest none better than a tribunal composed of the judges of the High Court.

47514. Sir John Colomb.—Does that apply to both tenanted and untenanted land, or do you mean it to be taken merely in reference to untenanted land?—I should apply it to all.

47515. Because you have already suggested a common basis, and that is the net income, and I don't see exactly if you accept that basis why this suggestion is necessary?—It is almost superfluous if that is actually given, but my idea was that there should be a Court of Appeal in the event of any dispute as to net income.

I could understand the tribunal being appealed to where there was a difference of opinion as to what was the net income, but if you take the standard of net income and abide by it I hardly understand the application of this suggestion.

47517. Chairman.—May I ask why you consider that judges of the High Court are specially qualified?—Because they are the most judicial minded men we have.

47518. What do they know about the value of land?—They can hear evidence. They don't know anything about a murder case, but they hear the witnesses.

47519. The assessment of the value of land is a very technical subject, and they would have to depend on the information given them by inspectors or assessors, or people appointed by them to inform them as to the price of land?—The price it fetches in the market is the great and almost only certain element, and should be regarded in this light, and effect would be given to it by any impartial tribunal. In the case of these grazing tenants it is the rent that has been paid, say, for from 18 to 20 years. If a judge considers that that has been satisfactorily proved it is very fair evidence of the value of the land.

47520. Sir John Colomb.—Would not you say appeal instead of tribunal?—It is in case that the other was not made an absolute basis to go on. It should be fixed by judges and not by Commissioners.

47521. That would be in the case of appeal?—Yes.

47522. Mr. O'Kelly.—Why do you suggest judges?—Because I consider that they are the most judicial men we have; the fairest men.

47523. Do you think that they are sufficiently versed in the present value of Irish land?—I should think that they would hear evidence.

47524. Don't you think that those who are trained to a knowledge of agriculture would be more competent to decide?—No; I am not a believer in experts in that way. I think that the only way you can find out the value of a thing is to find what it will bring or has brought.

47525. Are the best people to ascertain the value of Irish land those who know nothing about it?—No, but they would hear evidence.

47526. Sir Francis Mowatt.—Have you in your mind the immense expense of a suit in the Supreme Court to fix the value?—Would it be much more expensive than the Estates Commissioners?

Sir Francis Mowatt.—Much more expensive.

47527. Mr. Sutherland.—The judges are gentlemen whom we all knew before they were judges?—Yes.

47528. Going on the Bench does not change their nature?—It is impossible to get anything perfect in human nature. We must only try to get the best we can. It has been suggested that the poor law valuation plus one-third thereof should be taken as a minimum basis for compensation in the case of grass lands, but this would be a false basis to take in the County of Mayo, considering that the valuation was completed in or about the year 1857, when prices were at such a low ebb, and considering also that substantial improvements have been made on grass lands by the owners since the valuation was made. On reference to the reported prices furnished by the Land Commission it will be seen that the price of produce and of cattle have become largely enhanced even since the passing of the Land Act of 1881.

47529. Most Rev. Dr. O'Donnell.—Are you sure of that?—I have got the report issued by the Land Commission.

47530. Let me call your attention to a return that we have got. In 1880, wheat, oats, barley, potatoes, beef, butter, mutton, pork and flax sold at higher prices than in 1905?—I have got here the prices from 1886 to 1905. I could not obtain the earlier ones.

47531. Sir Francis Mowatt.—Would you say that the cost of labour has not increased at least as much as the price?—No.

47532. Is labour as cheaply paid now as it used to be?—A great deal of the labour is done by the people themselves on these small farms and does not cost them anything.

47533. But of course the value of the labour whether given by the man himself or hired in any other form is the same thing. It is the fact that the wages of labouring men have increased?—Undoubtedly.

Most Rev. Dr. O'Donnell.—From that return it would appear that all the products of Irish land were at a higher price in 1880 than they stood at in 1905.

Sir John Colomb.—That is a contradiction of returns already handed in.

7533A. Most Rev. Dr. O'DONNELL.—I think that our urns compared an earlier date than 1880 with 1905? To show the uncertainty of the principle underlying value of grass farms I may refer to the evidence en by Mr. Stuart, Chief Inspector to the Estates mmissioners.* In reply to question 17571, and in- d to other questions, he suggests his principle to be, offer 27 years' purchase on the gross fair rent for zing lands, but here again is a great danger to landlord, for everything depends upon the judg- nt of one or two men, as the case may be, as to at is a gross fair rent. Does it not appear absurd say that in a rental of £3,000 a year which has n regularly paid for grass land for a number of rs a gross fair rental would be £2,500, or £2,000, any lesser sum. Mr. Stuart deals with a specific e, and as there has been some confusion over this tter I have taken the pains to secure the exact ires. I find the rental which the owner was eiving for years to be £2,992 (say, £3,000) for an a of 3,188 acres. For this estate the estimated r was £49,671. Mr. Commissioner Bailey in his dence suggested that the Estates Commissioners red 27½ years' purchase to a western landlord and t the latter in refusing said the offer was in- ded as a *bad joke*, but it now appears the offer of years' purchase was not upon the net rental eived by the owner, but upon an estimated rent as d by the inspector. By investing the amount red by the Estates Commissioners, say, £50,000, s half bonus, £3,000, total £53,000, at 3½ per t., it would only yield an income of 855 as compared with a gross income of ,000 and a net income of £2,503, the loss ng £648 on net income, while the offer really ounts to 16½ years' purchase on gross rental, and years' on net rental. Can it be urged that a dlord who refused such a price was unreasonable, ecially when it is admitted, even by Mr. Stuart nself, that by accepting his figures the landlord uld lose at least £500 a year on this one trans- ion. It is suggested no argument can be drawn favour of compulsion from this instance of re- al, but rather that the Estates Commissioners had put themselves in a position to expect a favour- e reply from the landlord. I have also documen- y evidence to show that an offer was made to ther western landlord of £68,000 for his estate, which sum no less than £62,350 was for permanent anted holdings. This offer only amounted to 16⅓ rs' purchase of the average rents actually re- ved during the previous three years. The inade- acy of the offer becomes still more apparent, as it ried with it a condition that all arrears of rent the period after the previous May were to be in- ded in the sale; the arrears of rent were estimated produce over £1,900, so that attaching this con- ion practically reduced the 16⅓ years' purchase by lf a year. The rents were mixed, first term, second m, and non-judicial. The full particulars can be duced for private information of the Commis- ners.

47534. Most Rev. Dr. O'DONNELL.—In these cases u know the circumstances?—Yes. I have actually n the papers myself.

47535. Are they largely mortgaged?—I should not so.

47536. If they were largely mortgaged these prices ght leave the owner his net income?—I have no in- mation to that effect. I had to get the information self. I was shown the papers about it and can tell u.

7537. Mr. O'KELLY.—Why do you say half the aus?—Because I am informed by people who have d a good deal of experience that in the case of ge estates the costs amount to about half the bonus, d that in the case of small estates they nearly amp the entire of the bonus.

7538. In the case to which you have referred do u think they would be justified in losing a great l?—I don't think if the estate has to be bought and d to improve the congested holdings that the dif- ence between market value and the amount at ich it is necessary to sell to the tenant should fall on the landlord. It should be on the State.

7539. Would not you generally agree that the tates Commissioners would be right in being very umspect as to the price they would pay when there uld be a possibility of considerable loss on re-sale?—I think that that has nothing to do with the landlord. I think it is most necessary that the small holdings should be enlarged, and that properties should be bought, but I don't think that the loss should fall on one particular class.

47540. Was the income of £3,000, to which you refer, for one year or for a number of years?—For a number of years.

47541. How many years?—I could not say for certain.

47542. CHAIRMAN.—In your view, if the State embark on remedial policy, they must pay for it themselves?—The landlords pay their own fair share along with the other taxpayers. Why should they pay for it twice over.

47543. Most Rev. Dr. O'DONNELL.—You agree with the previous witness, Rev. Father Kelly, that no man should be injured in carrying out a State policy?—Yes, except to the extent of his fair share as one of the general public.

47544. But no individual class or individuals should be made to lose by carrying out a policy for the good of the general public?—That is my view.

47545. CHAIRMAN.—No class should be injured except the taxpayers?—Everybody pays that equally.

47546. Sir FRANCIS MOWATT.—What you say is that nobody should pay except everybody?—Yes. It should be fairly distributed.

47547. Sir JOHN COLOMB.—Mr. Corcoran said that the re-settling of the land would lead to an increase of population which would immensely benefit the shopkeeping class and the commercial community, so that at all events one class would be benefited?—They would be very fortunate.

47548. Your contention is that whoever benefits no class should suffer?—Yes, especially suffer more than their fair proportion.

47549. Mr. SUTHERLAND.—That is rather a new principle in the government of Ireland?—We are always having new principles in the government of Ireland.

47550. Mr. O'KELLY.—Don't you think that getting £2,500 a year from gilt-edged securities as Mr. Stuart offered in the particular case to which you have referred, would be a safer investment than if invested in what I should call a fluctuating income?—His actual loss is £648 a year on the one transaction. If you had only £2,500 a year you would not like suddenly to have £648 a year taken away from you.

47551. Do you suggest that the landlords should get 27 years' purchase of their grazing rents?—No, but Mr. Stuart said he had got 27 years' purchase of the net rental. I say he should get a sum which if invested at 3½ per cent. would not result in a loss.

47552. Can you conceive circumstances in which a £3,000 income would drop to £2,500?—It is a very unpleasant thing to happen.

47553. Let us assume that we had Canadian cattle coming in. That would mean a considerable drop in the market?—It might possibly. I can only go on what is happening at the present moment. Suppose that foreign importation were stopped we should get better prices for everything; and some people think that this may happen. I am not in a position to compare the prices which have been given by the Commissioners for grass lands in order to draw a conclusion as to the effect of same upon a landlord's income as the particulars do not appear to be given; *i.e.*, the grazing rental which they have acquired, but if their prices are on all fours with the offer made for the estate abovementioned, the loss to the owners must be appalling. I specially refer to Question 17630,* in reply to which Mr. Stuart suggests that the annuity is at least 15 per cent. less than the average fair rent, as this will show that grave injustice is being done to an owner who has no desire to part with his estate, but who yields under pressure, and then is asked to make such an improvident bargain that he is involved in a very serious loss of income in the future. In the case that I have been recalling they have been paid for twenty years.

47554. Most Rev. Dr. O'DONNELL.—Was that grass land?—Yes.

47555. Do you know was it heavily mortgaged?—I don't think so.

47556. Sir FRANCIS MOWATT.—You recognise the importance of the consideration as regards loss of income where an estate is heavily mortgaged at 4½ and 5 per cent. The man who gets that paid off may not have his income reduced?—I don't think that has

* See Appendix to the Third Report of the Commission [Cd. 3414, 1907], p. 225 *et seq.*

Aug. 21, 1907.
Colonel W. A. G. Saunders-Knox-Gore.

anything to do with anyone else except a man and his creditors.

47557. You speak of great sacrifices and men losing their income. I am pointing out a case in which there would be no sacrifice at all. I don't say that it was in that particular case?—The owners object also to the practice of preventing a sale going through to a tenant where the parties have agreed to a price, either for a tenanted holding, or for a parcel of land, carved out of the landlord's grazing land. It is submitted that, where the landlord is willing to give parcels of land to his tenants, and where the tenants have agreed to a price, the matter should be allowed to proceed without the intervention of any third party, as each of the parties to the contract is quite well enough able to decide for himself as to the value of his bargain, and yet we find instances in which such a bargain is actually arrested, on the ground that it is not sufficiently equitable from the tenant's point of view. There is such a thing as giving too good a bargain to a tenant at the expense of a landlord, and this is one of our chief objections to the practice which has been prevailing.

47558. CHAIRMAN.—It is not that it is not sufficiently equitable from the tenant's point of view, but that it is not sufficiently equitable from the State point of view?—But it is practically coming to the same thing as far as the landlord is concerned.

47559. Assuming that the authority through which the purchase is carried out is a perfectly just and impartial authority it is no concern of theirs theoretically what price is paid. The question of price is a matter between the landlord and tenant. All they are concerned with is whether the money that is advanced by the State, of which they are for the moment trustees is sufficiently secured on the property sold?—We argue that they have very excellent security, and that they are crying out unnecessarily under this head.

47560. I would only point out that it is not correct to say that the sale is arrested because the tenant is making a bad bargain, because the money that is asked to be advanced is more than the State ought to be called upon to produce?—I rather think that what I said before comes in, that if the difference between the two prices is to be found, as it may be possible that they cannot give the landlord a fair price without making the annuity for the tenant too high, then the State should pay the difference.

47561. That is demanding a bonus or grant which will be paid straight off and which will not be regarded as part of the mortgage, as it were, upon the estate. The State has bought an annuity which the property can be expected to pay. The difference in your case is made up by a grant from the State, outside altogether the question of equitable annuity—is not that so?—If it is decided that it is necessary to acquire land, and sell it to the congested population at a low rate, the difference between this rate and the market price should be paid by the State. It is most unjust to expect one class only, namely, landowners, to provide this money, particularly as they, in addition, pay their fair share in common with the rest of the taxpayers of the nation.

47562. Mr. O'KELLY.—Do you seriously suggest that the tenant is able to hold his own in negotiating with the landlord for the purchase of his holding?—Yes.

47563. That an unsophisticated tenant is able to hold his own with men learned in the intricacies of negotiations?—I think that the tenants are just as clever as the landlords—many of them.

47564. I differ from you in that. Why should not a third party intervene?—The State advances a certain sum to the landlord, and it is right that it should see that it got sufficient security for the repayment of that sum. The third party must intervene, because in the last resort the rates of the country are security for the advance, and other parties besides the landlords and tenants are interested in provident bargains being made. You know yourself that even this year certain sums have been stopped out of the grants to local authorities in connection with land finance. Suppose that improvident bargains were made, and that deductions were made from our annual grants in aid of rates, would not that work a great deal of hardship to all classes in the community, landlords, farmers, artizans, shopkeepers, and so on. Do you not see that there is something to be said for the suggestion that third parties should intervene to see that provident bargains are made, so that by and by the ratepayers of the country shall not be involved in great financial loss?—I thought that the object of putting in the zones was to prevent that, to simplify matters, and to have it settled that as long as prices fell within the zones the security was sufficient, and that the price was not too high or too low.

47565. I may refer you in answer to that to the case of an estate in the County Galway which, prior to the 1903 Act, was offered under the Ashbourne Act for eight or nine years' purchase. The Land Commission sent down inspectors, and they refused to say that the estate was security for eight or nine years' purchase. After the Act of 1903 was passed, the landlord proposed to sell at a price within the zones, which represented twenty-four and a half years' purchase. Do you seriously suggest that there should be no revision of a sale of that kind—twenty-four years' purchase under the Act of 1903 in a case in which the Land Commission refused to certify for nine years' purchase under the Ashbourne Act?—It seems a most extraordinary case.

47566. Sir FRANCIS MOWATT.—You admit that bargaining between the landlord and tenant is only possible by the State supplying the ultimate security. If the State supplies the security, is not it fair that the State should have a voice in the terms of the bargain for which it is supplying the security?—No doubt there is something to be said on that side. I am of opinion that powers should be given and the practice should be observed of scheduling congested areas by townlands rather than by electoral divisions or any other unit, and I am of opinion also that the Congested Districts Board should have the power to buy land outside congested districts, for the purpose of settling the poor people who are residential in non-congested districts, and I also am of opinion that the Board should be more representative of classes than it is at present. What I mean by that is that there should be more people. There are very few from Connaught on it at present.

47567. When you say classes, do you mean counties?—Both classes and districts. I suggest that there should be a resident agricultural instructor in each district with a fair-sized farm under his control. I suggest that sporting rights should be reserved in the interest of the estate and of the community, and that where an estate has been sold with the sporting rights the Estates Commissioners should take precautions to conserve such rights, and to apply the income derived from the sporting rights in relief of the annuities payable by the tenants on such estates according to some equitable adjustment.

47568. CHAIRMAN.—I presume you cannot get money for the sporting rights from the Government; there is no advance made in respect of sporting rights?—I don't think so. I suggest that where there is turbary bog upon an estate which has been sold direct to the tenants the Estates Commissioners or Congested Districts Board should take upon themselves, having regard to the machinery they possess, the function of striping and mapping the bog, so that it may be equitably allocated amongst the tenants, and I also suggest that a fair price should be paid for turbary estimated upon a basis of its value for fuel.

47569. Sir FRANCIS MOWATT.—In your opinion the Congested Districts Board should have power to buy land outside congested districts for settling poor people who are resident in non-congested districts?—If a man is a poor man on an uneconomic holding not in a congested district land may be bought in that district alongside his holding, and while the ills of one man may be put an end to the other man cannot be helped.

47570. The result is a little illogical. You would make the Congested Districts Board do its work in congested districts, and when you advocate purchasing land outside congested districts for the purpose of assisting residents outside congested districts you extend the application of their operations all over Ireland?—It is very hard lines on a man living outside a congested district on an uneconomic holding if he sees property bought alongside him to help others while he himself cannot be helped.

47571. Most Rev. Dr. O'DONNELL.—I think Sir Francis suggests that you might limit the statement in your paragraph to those poor people in non-congested areas who are on the fringe?—That is what I am driving at.

Right Rev. Monsignor O'Hara examined.

47572. CHAIRMAN.—What are the particular points that you wish to bring before us?—I do not wish to repeat evidence already given. What I wish to call attention to is a concrete scheme here at home. It has been stated already that there are ten electoral divisions congested in the Ballina Union. Four of these congested electoral divisions are practically in the parish of Crossmolina, of which I am parish priest, and the four electoral divisions are in one group, and just on the fringe of them, to the east where we are sitting now, there are two non-scheduled electoral divisions. I made it my business to look up the figures for the Ballina Union in the office of the clerk of the union, and I find that in the four congested divisions of Crossmolina there are 320 holdings of the value of £5 and under. On the fringe of these four divisions there are two non-scheduled divisions running from north to south. In these two divisions non-scheduled and a portion of the Deal division which is scheduled there are, according to the union records, close on 5,540 acres exclusively in grass, and on which there were small farmers before the Famine and down to the 'fifties who have since disappeared. 5,540 acres in these two divisions would afford 27 acres each to 200 migrants from the other four divisions, and afford 18 acres each to 300 migrants. If even 4,000 acres of these could be secured by any authority, such as the Congested Districts Board or the Estates Commissioners, it would afford 20 acres to each of 200 migrants from the other divisions.

47573. Would not you in your distribution of grass lands be disposed to think that it would be a mistake to block out every holding into 20 acres? Would you not be disposed to vary it a little?—I am only making a suggestion as to what division might be made. A man of experience like Mr. Doran might make other arrangements. I am only referring to the capabilities of the district for migration, which I am told in other districts is a very difficult question to solve. Here you have the people at home on the spot, in their own parish, living on thoroughly uneconomic holdings of from £5 valuation down to 30*s.*, and they have at their very doors the means of affording relief if the broad acres which lie at their very doors could be secured, and the land which they would vacate could be used to relieve the congestion of the small holders who would remain.

47574. Most Rev. Dr. O'DONNELL.—You take 20 acres because you consider that a family could live on 20 acres?—Yes. These lands around Crossmolina, North and South, are good lands, but would certainly be rendered much more useful if tilled, for the simple reason that some of them have been in grass for the last 50 or 60 years, and are deteriorating. They would be splendid land—typical land for small holdings. Twenty acres would be a very nice holding for the man I speak of, who should certainly be migrated if that were possible.

47575. You would not mind from what quarter these migrants came into the parish?—After all the congests in the parish were relieved I would welcome migrants from outside, even in preference to sons of tenants already relieved in congested districts in my own parish. They are in the parish already. In the four scheduled divisions there are 320 holdings under £5 valuation. They are most miserable holdings over in the mountains.

47576. So that in the parish already you have persons on uneconomic holdings who would require all the grass land?—All, and more if we could get it.

Captain ANTHONY MAUDE.

47577. CHAIRMAN.—You wish to make a statement in reference to some evidence that has been given today?—Yes. Mr. Corcoran in his evidence gave returns of certain landlords in this barony and stated that they refused to sell their estates. I, on behalf of the Earl of Arran, a very large landowner in this barony, wish to refute that evidence. Lord Arran took an active part in passing the Land Purchase Act of 1903. He was perfectly willing to sell his lands, including those on his own hands, with the exception of his demesne, on such terms as would give him his present income when the capital was invested at 3½ per cent. I may also state that for the purpose of arriving at the principle he would have no objection to the inspection of his rentals for the last 15 or 18 years, in so far as it showed the gross rental and the estate outgoings.

47578. Most Rev. Dr. O'DONNELL.—I might refer to the statement, which does not seem to be quite met by what you have said: regarding sale by landlords to tenants, there are not many landlords within this union who have sold to their tenants; the largest landlords are holding out for an exceptional price, such as Mrs. Saunders Knox-Gore, Mrs. Pringle, Sir Roger Palmer, and Lord Arran; these landlords are insisting on 24, 24 and 26 years' purchase of second term rentals, together with the bonus, or from 33 to 35 years. What I put to you is this, that the witness did not state that Lord Arran had refused to sell?—I clearly understood that he said Lord Arran had refused to sell his estate.

47579. Mr. O'KELLY.—Negotiations a few years ago were going on, I understand, between Lord Arran on the one hand and his tenants on the other: is that so?—Yes, it is. I was negotiating a sale of the estate at the time.

47580. Would you kindly state why the sale fell through?—I was meeting various deputations from various parts of the estate, which is scattered over North Mayo, three years ago. But when I thought that terms had actually been arranged the tenants informed me that they would not buy on any terms unless the estate was handed over to the Estates Commissioners. What happened in this part of the county at that time I do not know, but the tenants had a meeting, and declined to go any further with the matter unless the estate was handed over bodily to the Estates Commissioners. This, Lord Arran refused to do; but I went so far as to say that if they came to terms with me I would then ask Lord Arran to hand over his estate in bulk to the Estates Commissioners, but that before this was done they would have to come to terms with me as to the number of years purchase that they would give.

47581. I thought you said that the terms had been arrived at?—Practically. I sold one townland.

47582. And suddenly the tenants said they would have nothing to do with it unless it was handed over to the Estates Commissioners?—Yes.

47583. You say that Lord Arran had a good deal to do with the passing of the Act of 1903?—He had. He was most anxious that it should be passed for the benefit of the tenants.

47584. One of the objects of the Act, in fact the chief object in the West of Ireland, was to have the grazing land distributed among the people?—Yes.

47585. Do I take it that the tenants were anxious that the occupied land and the untenanted land should be handed over bodily to the Estates Commissioners?—Yes.

47586. The tenants, I understand, suggested that the fixing of the price should be left to the Estates Commissioners, and said that they would be willing to agree to whatever price the Estates Commissioners after inspection decided was fair and equitable?—I believe that that was the case.

47587. Speaking as a sensible and experienced man do you suggest that that was not perfectly reasonable?—I do not think it was.

47588. Do I understand you to say that what you wanted was to sell the occupied land direct to the tenants, and afterwards to have negotiations in connection with the grass lands?—No. I gave a guarantee that if the tenants came to terms with me as to the number of years purchase they would pay that the untenanted lands would be sold to the Estates Commissioners.

47589. Then I ask you this: what particular objection had you to negotiations with the Estates Commissioners?—Lord Arran thought, and I agreed with him, that we were quite able to negotiate a sale of the tenanted lands as well as of the untenanted lands to the tenants without the intervention of a third party. A number of the tenants had agreed with

Aug. 21, 1907.

Capt. Anthony Maude.

me at the time, until whatever came over them they suddenly declined to go any further unless I got Lord Arran to hand over the estates.

47590. Then the negotiations broke down?—Yes; except in the case of one townland.

47591. Has any attempt been made since then to re-open the negotiations?—Very lately I was approached, but not by the great bulk of the tenants.

47592. Have you been approached recently?—Within the last eight or ten months.

47593. What reply did you make to the request of the tenants?—I wanted them to give me the names of the tenants who wanted to buy, because it would not be worth while having the whole of the estates surveyed unless the great bulk of the tenants on any one of the particular estates agreed to the terms. Lord Arran has six separate estates in Co. Mayo.

47594. But you still persist in your original decision—that you were not going to sell to the Estates Commissioners, but to the tenants themselves?—If the Estates Commissioners said to-day that they were willing to give a sum which, if invested at 3½ per cent., would give his net income to Lord Arran, I would agree to their offer at once on behalf of Lord Arran.

47595. Do you mean to say you want to get the grazing rents also?—Certainly. Since the Act of 1903 was passed I have sold over £1,000,000 worth of property in all parts of Ireland.

47596. You are aware that it was generally understood that one of the conditions of a general settlement of the Irish land question was the restoration of the evicted tenants?—Yes.

47597. Lord Arran took part in the passing of that Act with that object in view, yet Lord Arran has consistently voted during the last few days against the Evicted Tenants Bill?—I do not know anything about that. I am perfectly willing to sell on behalf of Lord Arran, and the Estates Commissioners can reinstate evicted tenants, split up grazing lands, or do anything else, provided we get our terms. I asked the names of these tenants who were willing to buy to put before Lord Arran.

47598. To whom did you send that communication?—To Mr. Purdue, of Mullaghafarry, near Killala.

47599. Most Rev. Dr. O'Donnell.—You stated a moment ago that the owner of the property was prepared to transfer the grass land to the Estates Commissioners provided that the tenant and the owner had first agreed about the purchase price of the tenanted land?—Exactly.

47600. Did you consider what would happen if you, as representing the owner, and the Estates Commissioners did not agree about the price of the untenanted land?—I gave a guarantee that we would sell it.

47601. I quite understand that. What was exactly the meaning of that guarantee?—That I would leave it to them to fix the value of the untenanted land.

47602. To the Estates Commissioners?—Yes. It is a very large estate, and the untenanted land only amounts to 640 acres of good land; and I thought that for that amount of land it would not be worth while fighting about £1,000 or so.

47603. Sir Francis Mowatt.—Assuming you came to terms with the tenants as to the tenanted lands, you were prepared to leave the purchase price of the untenanted lands to be settled by the Estates Commissioners?—Yes.

47604. Sir John Colomb.—That was because the amount of untenanted land was so small as compared to the size of the estate?—Yes.

47605. This difficulty never would have arisen had it been the custom and practice of the Estates Commissioners to give such a sum as, if invested at 3½ per cent., would represent the net income of the landlord when the whole transaction was completed?—Certainly it would not. There would be no need for compulsion or further legislation if they did that.

47606. You have vast experience all over Ireland. You have sold a million's worth of land?—Over a million.

47607. May we take it from you, with your experience, as your opinion that if the rule of the Estates Commissioners or the Congested Districts Board was this that when they wanted land they said: "We will give you such a sum as when invested at 3½ per cent. represents your net income," there would be a general transfer of land, as much as the Estates Commissioners or the Congested Districts Board wanted to get?—I have not the slightest doubt of it. Of course, they should be left their demesnes.

47608. Is not one of the deterrent influences on landlords against dealing at all the great uncertainty that prevails when they agree to sell, and when inspection takes place, and the enormous difficulties that they are placed in if there be any difference in the end?—That is the whole difficulty. If the Estates Commissioners would say, "We are prepared to give you such a sum as, if invested at 3½ per cent., would give you your present income—let us go over your accounts," if necessary to ascertain amount of rental, they would at once fall into line, and every difficulty would disappear.

47609. Mr. Sutherland.—Have not you said you would consent to this because it was not worth while to dispute over it?—I would consent on behalf of Lord Arran in the case of the untenanted lands, provided terms were arranged for the tenanted lands.

47610. Mr. O'Kelly.—If you were willing to trust to their justice with regard to the untenanted land, why would not you trust their justice with regard to tenanted land?—Because there are only 640 acres of untenanted land.

47611. You would like to get for Lord Arran the full value of his property?—Yes.

47612. The 640 acres is part of his property: you would like to get the full price of that for him?—Certainly.

47613. You are willing to trust the discretion of the Estates Commissioners in determining the price of that 640 acres?—Yes.

47614. Why, if you are willing to trust them with regard to 640 acres, do you hesitate with regard to the occupied portion?—What I meant to imply was that the grass lands in hands need scarcely be taken into account in comparison with the entire size of the tenanted estate.

47615. Then really Lord Arran would say this: "Get me the best price possible for the occupied portion, and you can do what you like with the unoccupied portion"?—We are all anxious to get the best terms possible.

47616. Sir John Colomb.—And Lord Arran was so anxious to sell that he would not raise any small points about his untenanted land?—Yes. He did not wish to stand in the way of benefits to his tenants.

47617. Most Rev. Dr. O'Donnell.—I think you have sold some land to the Congested Districts Board?—Yes.

47618. In selling that quantity of land, which cost more than a million of money, did you, in demanding a price from the tenants, ever put forward a standard of net income to the landlord?—In some cases I did.

47619. Have you got more or less than the net income?—Just about the net income. I have sold a great deal in Donegal, in your lordship's diocese, on the terms which I would have sold this estate for.

47620. The Arran Estate?—Yes, and Lord Templemore's Estate.

47620A. Did you sell any land in Donegal before the Act of 1903?—I don't think I did. I am not certain that I did not sell part of the Connolly Estate before the Act of 1903.

47621. With your knowledge of the Arran property and of what the Congested Districts Board would have to do when it bought the property before transferring it to the tenants, don't you think it would be a good thing that this Arran property here should pass through the hands of such a body as the Congested Districts Board or the Estates Commissioners doing like improvements before it is sold to the tenants?—I don't know how to answer that exactly. I know that the Congested Districts Board have made enormous improvements where they got these estates.

47622. Most Rev. Dr. O'Donnell.—Even if you agreed with the tenants as to terms would not it be a good thing if remedial processes were applied by a public body like the Congested Districts Board or the Estates Commissioners before the tenants became tenant purchasers?

47623. Chairman.—Surely there would be no objection from the landlord's point of view?—Not a bit.

47624. Would you agree with the tenants as to price, and then allow the Congested Districts Board to come in and say: "Don't sell this direct, because if you sell direct it will be almost impossible for these people to improve and re-stripe, but when you have

rranged with your tenants we will take it over"?—hat would meet our case exactly.

47625. Mr. O'Kelly.—In negotiating with the tenants did you ever demand a price for Lord Arran's roperty?—I don't think I demanded a number of ears purchase, but said that Lord Arran would have have his present income.

47626. Would not the first step be to say: "Lord rran's income is so and so; I must get so many ears purchase in order to secure for Lord Arran his et income": did you do that?—I cannot say positively that. I had a great many interviews.

47627. Might I suggest that from the beginning to ie end neither Lord Arran nor his agent ever asked price of the tenants on the property?—I am perctly positive that I stated the terms on which his rdship would sell; that was to give him his present ıcome.

47628. The tenants did not know what Lord rran's net income was?—I said that Lord Arran ould sell on such terms as would give the tenants a duction of four shillings in the £.

47629. Then my memory is at fault, and I apolose. Two witnesses mentioned Mr. Pratt as having ffered to sell his estate at 18 years' purchase, and a onth afterwards increasing his offer to 27 years' urchase. Here is documentary evidence to show that this is inaccurate?—He made his offer in 1899 when Land Stock was at 112, and he would receive his present net income. His rent had not then been reduced for a second statutory term. He was not approached again by the tenants until October, 1903, when he told them that he would sell on such terms as would yield him his present income. Some of the rents have been reduced on a second statutory term since 1899, and it would work out that he would be getting less than if he had sold at 18 years' purchase in 1899.

47630. Most Rev. Dr. O'Donnell.—Do you say that the increase in the number of years purchase is represented by the reductions in rent?—In 1899 the landlords were paid in Land Stock, which was then equivalent to 112, and then the rents were reduced by the second statutory term. Even if you arrange terms with your tenants you cannot hand the property over to the Estates Commissioners. They won't take over the estate. If I had fifty tenants on an estate now and arranged terms with them, and asked the Estates Commissioners to take over the estate they would not take it over from me.

47631. Chairman.—The Congested Districts Board might?—Yes. If that could be done it would simplify the sale of estates here very much.

Rev. Patrick Kevany examined.

47632. Chairman.—You wish to make a statement reference to the evidence of Mr. Maude?—Yes. e has referred to deputations of tenants to him. 7e never got so far in the matter of the sale of the rran Estate. No deputation of tenants ever waited ı Lord Arran or on Mr. Maude.

47633. Most Rev. Dr. O'Donnell.—What did haphen?—It leaked out through some means that Lord rran was prepared to sell his estate. A meeting of ie tenants was called in the Boardroom, Ballina, nd the clergy of the several parishes were notified lso. I happened to be a curate in the district, and attended at the request of the tenants in the dis-ict. I think Captain Maude was there. We adourned the meeting for a fortnight, and appointed number of delegates to ascertain the views of the nants and what they were prepared to give. We et on a second occasion and a third occasion. aptain Maude was present on all these occasions, ut no deputation ever waited upon him. He walked a to the meetings of the tenants as if he was a nant himself.

47634. Did you formulate any terms?—We did not et that far. We did at the last meeting. We reolved in the parish in which I happen to be Adinistrator—the district of Shraheen, which Mr. Telvin referred to, which is cut out into rundale two idges wide—that it should never be bought direct by the tenants, as it would be useless to them with a ridge here and a ridge there. It was resolved that the congested portions of Lord Arran's Estate should be purchased through the Congested Districts Board and that the non-congested portion of his property and the grazing lands should be purchased by the Estates Commissioners, but it was not proposed either to hand over the estate as a whole to the Estates Commissioners as a bulk sum or as a going concern, or as Captain Maude demands to have offers made by the tenants and then have the price bid up as it would at an auction.

47635. Is there much rundale on that estate?—I understand that there is some at Ballycastle, but we have some at Shraheen.

47636. Chairman.—What do you mean by that reference to auctions?—At an auction a man bids a certain sum, and then another bids more.

47637. Is it unreasonable for anybody who is asked to sell property to ask: "What are you prepared to give"?—I think it should follow the purchase and sale of any other article, and that the man should be asked "what are you prepared to accept?" We have heard to-day for the first time that the net income is acceptable, and that is not a matter of bidding up.

47638. Most Rev. Dr. O'Donnell.—You had no statement to that effect before?—I don't think so.

The Commission adjourned.

NINETY-FIFTH PUBLIC SITTING.

FRIDAY, AUGUST 23RD, 1907,

AT 11.0 O'CLOCK, A.M.,

At the Courthouse, Belmullet.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (Chairman); The Right Hon. Sir JOHN COLOMB, K.C.M.G.; The Right Hon. Sir FRANCIS MOWATT, G.C.B.; Most Rev. Dr. O'DONNELL; CONOR O'KELLY, Esq., M.P.; WALTER KAVANAGH, Esq., D.L.;

and WALTER CALLAN, Esq., Secretary.

Aug. 23, 1907,

Mr. John O'Malley.

Mr. JOHN O'MALLEY examined.

47639. CHAIRMAN.—You are appointed by the County Council?—Yes. The evidence that I propose giving is practically about the parish of Kilmore and the cases of congestion in the parish of Kilmore.

47640. Sir JOHN COLOMB.—What union?—Belmullet Union.

47641. What is the electoral division?—Binghamstown North and Binghamstown South.

47642. Most Rev. Dr. O'DONNELL.—Altogether in the Erris peninsula?—Yes.

47643. CHAIRMAN.—Very well, go on?—The population would be 2,876, and the valuation of both would be £3,440; and in those two electoral divisions nineteen people hold 10,028 acres 3 roods 4 perches, almost all non-residential holdings and all the best grazing land inside of Mullett. Now, the valuation of those 10,028 acres that those nineteen people hold would be £1,531 9s., or, roughly speaking, 50 per cent. of the value of the whole two divisions. I have the names of those people, with the acreage they hold, if it is necessary to give it.

47644. I think we have got all those figures, but you can put it in?—Well, as you have all these figures there is no necessity for going over them, I am sure. All I would say in reference to that particular grievance is that the main causes of congestion in these parts are the number of large ranches held by these nineteen people and the small uneconomic holdings that the poor people are driven out of. Those are the main reasons, and any figures that I could give would not give you the slightest idea. If you see for yourselves where the bullocks are and see where the people are placed it would be more than if you got all the figures in the Blue Books in reference to it.

47645. Mr. KAVANAGH.—Have you got any knowledge of Ardmore Point?—Ardmore Point would be fairly difficult to get at, because there is hardly a road going there, but it is one of the worst places.

47646. Living in the district, I daresay you have a knowledge of Fallmore?—Fallmore—a bad bit.

47647. And do you think that is a place the Commission might visit with advantage?—Yes, Fallmore and all round to the left of the road that you, Mr. O'Kelly, have a knowledge of. You have been once out there before, but it would be well if the other members of the Commission also went to see all this and visit this district. It is certainly scandalous to see the state of affairs that exists.

47648. Most Rev. Dr. O'DONNELL.—Is the grass land conveniently situated?—Just across the road, and you will see traces of tillage where those large grazing ranches were all tilled some years ago. You will see the marks of the ridges there, the marks of the tillage.

47649. I suppose before the Famine that district was under tillage?—Oh, yes, and a long time after the Famine, a long time after. That would be 1846, but long after that the population of Mullett was double what it is now, for very many years. Of course I have statistics here to show, but I am sure you have them all in the Blue Book.

47650. Sir FRANCIS MOWATT.—Quite so. What you are mentioning is that there are a number of very small farmers and a number of very large grass holders, and your suggestion for the relief of the small holdings is the acquisition of some of the large holdings and their division amongst them?—Yes; quite so.

47651. And then I suppose any more figures will not help?—Ocular demonstration will show you the whole thing if you will see for yourselves.

47652. CHAIRMAN.—The Board have not bought any property in Mullett?—No. They have bought some islands out in the sea and a few little places like that.

47653. Have they approached any of the landlords of the Mullett, do you know?—Oh, I think they have. I am sure they have. In fact there are very few tenants in Erris that have not approached the landlords.

47654. I do not mean the tenants, but I mean the Board. Have they taken any steps to acquire the land?—I have not heard so.

47655. Sir JOHN COLOMB.—Have there been any direct sales from landlords to tenants in this district?—No, none whatever that I know of.

47656. I do not mean only under the Act of 1903, but have there been any such in the last twenty years?—None that I know of.

47657. Mr. O'KELLY.—The owner of the island of Inniskea, I understand, was a Mr. Walsh?—Yes.

47658. Inniskea was sold to the Congested Districts Board?—Yes, through the Congested Districts Board.

47659. Sold to the Congested Districts Board?—Yes.

47660. I understand that Inniskea is only part of a large property?—It is part of Mr. Walsh's property.

47661. Inniskea is owned by Mr. Walsh?—Yes.

47661A. The island of Inniskea was sold to the Congested Districts Board?—Yes.

47662. Did Mr. Walsh refuse to sell the mainland portion of his property to the Congested Districts Board?—He did. That is what I am going to explain.

47663. Do you think it is a wise policy to purchase a detached portion of property as in this case?—I do not think it is of much use to the people to purchase these little patches.

47664. The land on the mainland, I understand, is grazing land?—All grazing land, non-residential too.

47665. And Mr. Walsh refused to sell the mainland portion of his property?—He refused to sell the grazing ranches in the vicinity of Aughlian.

47666. Do you think it is wise of the Congested Districts Board or any other body to declare a detached portion of a property an estate in circumstances of this kind?—No, I do not.

47667. Most Rev. Dr. O'DONNELL.—Would it be much better if the Congested Districts Board, besides acquiring the island, had been able also to acquire this grass land which is on the same property?—Yes.

47668. And not being able to acquire the grass land, do you think it was good to acquire the island and set afoot the process of bettering the condition of the people?—Oh, it has much improved the islanders, but these are a very small fraction of the population of the Mullett.

47669. So far as it goes you think it was a good scheme?—It is about four miles from the mainland.

47670. If a public board like the Congested Districts

oard has failed through causes not under its own ntrol to acquire the grass land on this particular operty, the Walsh property, is not it a good pro- ct to acquire an island like Inniskea with the object improving the fishing population?—It is very good, t it will take another century to get along to quire the whole of the lands if they are to be got bits. I would suggest myself and any reasonable an, I am sure, will agree that the main point is to ve compulsory powers of purchase to the Congested stricts Board to buy up all Erris.

47671. You would like to buy up the whole land?—es.

47671A. Do you think if it were bought up by the ngested Districts Board that within the boundary the peninsula a sufficient amount of grass land uld be found to make economic most of the hold- gs that are now uneconomic?—Certainly. The ures show that there is 50 per cent. of the whole of e land in the hands of 19 men out of a population 2,876. It is quite evident.

47672. Would you look at Erris as a whole?—Yes.

47673. Would not you say this, that if Erris, which cupies a very unique position, is to be improved e whole of it should be bought up at once?—Yes, d drained.

47674. And great improvements in the shape of ainage should be carried out in it?—Drainage is the xt thing.

47675. You think there is no hope for Erris unless d until all this waste land is acquired?—None natever, and if I were dying and on my oath I uld say I believe there would no reform otherwise. is year by year going in fact the other way and e youth of the country are all leaving. They can- t live on these patches of land, and a number of em go across to England for the wages they get ere, where there is something to be earned, and the xt thing is America.

47676. Most Rev. Dr. O'Donnell.—It would strike e that with Erris jutting out to the ocean as it es there is another source of livelihood, that is e fishing?—Yes.

47677. Do you not think that the coast population ight, to a large extent, be provided for by fishing velopment?—That is quite so, my lord, but like her things, unfortunately in Erris there is no arket to be got for the fish. Fish to the value, I lieve, of £100 in one day has rotted on the shores Belderig for want of a mode of conveyance. The h is taken in here and there is nothing but this ng car to drive forty miles to Ballina, and there is means of sending the fish out of here, though there abundance of fish round this coast. In fact it is a gular gold mine. Some have been caught by the en from Scotland here to the extent of 8 to 11 ns at one time.

47678. What you state leads to the conclusion that r the development of the fishing transport facilities e necessary?—Quite so.

47679. Is there a boat service at present towards igo?—Yes, there is that boat service, but bringing sh fish to Dublin is a farce. You could not send That service is inadequate, inasmuch as it does t meet the train and the fish lies over there all ght, and three days is enough in hot weather to ruin e fish.

47680. It is some improvement, but not sufficient?—a, not at all. The Congested Districts Board, at r. O'Kelly's special request, added one extra trip in e week, but even that did not do. The fish would bad when it would be landed in England. Black- rn, I believe, was where it was usually sent to.

47681. Mr. O'Kelly.—You have got an extra trip the week?—No; it was taken off the moment the hing dropped.

47682. I meant to say during the fishing season. nd there was a man who come over from Scotland?— r. Murgatroyd.

47683. And the Board of Works gave guarantees?— es; so I believe.

47684. And you had the extra service?—Yes.

47685. And did that assist?—Oh, it did. It sisted him in particular.

47686. Sir Francis Mowatt.—Whom?—This ntleman in particular. He had ice specially and ed to ice the fish.

47687. Chairman.—What extra service was this you d?—The boat only made two trips in the week.

47688. The Sligo boat?—Yes, the Sligo boat, and on account of the quantity of fish that was lost the year before owing to having only two trips he got on this extra trip, which assisted him materially, as every other day he had the fish iced and sent in time for the train next morning.

47689. And after that you got a three times in the week service instead of two?—Yes.

47690. And where was the ice kept?—He kept an ice boat. He got the ice in Dublin.

47691. Where was the ice kept?—On board the Tartar, on board of the steamer; the steamer Tartar that plies between here and Sligo.

47692. Having caught these fish, and having got them on board the ship, he put them into ice on the ship?—On the ship. That is it.

47693. Sir John Colomb.—You have seen that done?—Oh, yes; they were iced on board.

47694. He had not them iced on shore?—He took the fish out of the different stations between here and Sligo. There are four or five stations. There is Belderig and Porturlin and Portacloy and Ballycastle. Those are the four stations the boat usually puts in at.

47695. Chairman.—Does this vessel call at those places now?—No, not frequently. It only calls in at Ballycastle and Portacloy on its journey up.

47696. How often does she call there now?—It depends on whether or not she has stuff there for the merchants.

47697. Was it part of this gentleman's contract that she was to call at those places?—Yes.

47698. On every trip?—On every trip, weather permitting. If the weather was bad, or a squall came, I do not think she could put into those places, and the fish would be left there.

47699. Where were they caught?—Off the coast here.

47700. Where were they brought to principally?—Belderig, as a rule. The greatest takes were at Belderig, I should think.

47701. You say she called there every other day and the fish was put on board and put into ice-boxes on board?—Yes.

47702. And then taken to Sligo?—Then taken to Sligo, but if there was a gale she could not put in anywhere, and returned here, and in that case the fish had to be taken by carts to Killala station. On several occasions they had to take the fish on to Killala station.

47703. That rather shows the ice was on shore?—They had no ice on shore. They just chanced sending them on to Dublin.

47704. Most Rev. Dr. O'Donnell.—Where were the fish put on board of the steamer?—They were put at different stations—Ballycastle first, Belderig next, and Portacloy and Porturlin, and the fish at those stations were taken on to the boat and put on board.

47705. Besides the two runs in the week were there exceptional arrangements made on several occasions to suit this fishing?—Yes, there were.

47706. If the railway were carried on to Blacksod Point it is contemplated that it should touch the deep water at Broadhaven Bay also?—Yes.

47707. That is contemplated?—Yes.

47708. And touching the deep water at Broadhaven Bay would be a very great advantage to the fishing?—A very great advantage entirely, my lord.

47709. Would not it be one great means of developing that fishery?—It would, certainly, all along the north coast; but one thing that would have to be secured would be a permanent service.

47710. Chairman.—Are the people very much more in favour of a railway by the north coast than by the Mulranny route?—Well, we came to the conclusion in Belmullet, some eighteen months ago, that we would never advocate any particular route, as we were told by the Government on one or two occasions that they could not diagnose what we wanted. We fought amongst ourselves in the past, but now we simply advocate a line, leaving it to the Government to fix.

47711. But you must know which you would prefer?—The people?

47712. Yes?—It is supposed that the greater population is to the north coast side and a greater number of people would be served on that side.

47713. Is not it the fact that the fishing at Broadhaven and round the northern coast is far better than the Blacksod fishing?—It is.

Aug. 23, 1907.

Mr. John O'Malley.

47714. And the population is very much more there?—The population has improved.

47715. Therefore, from the fishing point of view, is not it the fact that the northern route would be of much more use than the Mulranny route?—Oh, yes, it would; it would serve a greater number of people, fishing people.

47716.—But the northern route is critised sometimes because there is an idea that it might take trade aside?—Well, I don't know anything of that. I do not think so. We are not very particular about which we get, or at least we are quite indifferent; but I believe what they call the All Red Line would be the best of the two.

47717. Mr O'Kelly.—You have got a number of fishing stations along the north coast?—We have, sir.

47718. And to develop those fishing stations, and to make them a source of profit to the people a railway is necessary?—Without a railway there is no salvation for Belmullet. You are quite aware of that yourself, from the number of journeys you have made here. It is the only part of His Majesty's dominions so far from a railway station—forty-two English miles.

47719. I will not ask you to offer any opinion, or say whether you favour the route by Mulranny or from Killala by the north coast to Belmullet?—I would not be prepared to offer any opinion. We are prepared to take a railway, and we are pressing to have one, and can show we have a grievance in not having one, but we are not going to quarrel amongst ourselves again about any of the routes. Let them settle it finally for us and we will have it.

47720. Sir John Colomb.—When you say that you are prepared to take a railway I suppose you mean to take it for nothing. Are you prepared to say that the general feeling of the country is that the district ought to be taxed to make the railway?—There is no tax. The Midland Railway, at their recent meeting, had the matter before them.

47721. I am not asking you what is the actual position, but I am asking you a general question. When you say that you are all prepared to take a railway do you mean to say you are prepared to pay for it?—No.

47722. Now, what is your business—are you a farmer?—I am a farmer's son. I am a shopkeeper in town.

47723. Do you hold land of your own?—No; a few patches round the town here.

47724. Now, what is the acreage of your father's farm?—It would be eighteen, I should think.

47725. It is a considerable farm?—No, it is not. It would be about twenty acres at the most.

47726. Is it thoroughly drained?—Well, it is not very well drained indeed.

47727. Can you tell me why it is not well drained?—Well, it is in a low-lying place. What I mean is that it is along the flat of a river, and what drainage is required is naturally drained out in the summer time into the river, and in the winter time it gets those floods you see in the low-lying swamps and draining would be of no use.

47728. And I understand that on this farm of your father all that can be drained is drained?—All that can be drained is drained. But the fact remains that for miles all along that river through which, or beside which, our farm is, in the winter season, with the water swelling, it would be about the level of the land, so that there would be no possibility of an outlet.

47729. Quite so. That is enough. But you spoke, in a part of your evidence, of landlords refusing to sell. Do I understand you aright that the landlords have refused to sell?—Yes.

47730. Do you deliberately state that the landlords have refused to sell?—Yes, almost all of them, except they get fabulous prices, prices of course that the Estates Commissioners would not pay, and that the Congested Districts Board would not agree to either.

47731. You do not mean that they refused, but that they would not accept the prices offered to them?—Yes.

47732. And who offered the prices?—Well, the tenants round the district held a meeting and committees were formed and waited on them.

47733. And the tenants did not offer enough to induce the landlords to accept the offer. Is that the position?—That is it.

47734. It was not that the landlords refused to part with their lands?—There were some landlords that did refuse.

47735. And I want to know who?—Mr. Walsh is number one. He sold the island of Inniskea, but refuses to sell large grazing ranches.

47736. Mr. O'Kelly.—On the mainland?—On the mainland. And there is Mr. Charles M'Kyne.

47737. Sir John Colomb.—How do you know that?—I know it from what I heard from the people

47738. You are not in the secrets of Mr. Walsh's property, and you now say that when you say the landlords have refused to sell you mean that you have heard that they refuse to sell?—But I am in a position to say what I know.

47739. That is my point. I want to know whether you are giving direct evidence of a fact of which you are perfectly cognizant yourself of your own knowledge, or whether you are making a statement that you heard. I want to know which is it?—Well, there is this much about it, that we have proofs. Of course I have not them here now, but I can find proofs for you of where those landlords have been written to, and one of the reasons why they would not sell is because their estates have been encumbered, and they would not be entitled to the bonuses that they would in inland districts, or in non-congested districts. Those estates have been encumbered, and they wanted twenty-four and twenty-six years' purchase for land which, if you travelled about the place and saw it, and how the tenants have to live, you would be inclined to say they could not afford to pay more than twelve or fourteen years' purchase for instead of twenty-six.

47740. What I want to know is this, when you make a statement, whether you are making it from your own knowledge or from hearsay?—I have made it from what I heard, but I can give you proofs of it, too.

47741. You said it was not wise for the purchasing authority, the Estates Commissioners or the Congested Districts Board, to purchase part of a property, but that when they purchase they should purchase the whole of it?—Yes.

47742. And, therefore, you agree that the purchasing authority, taking part of the property, should be bound to take the whole of it?—I believe that the whole of Erris should be purchased out and compulsory powers given to the Estates Commissioners or Congested Districts Board to purchase the whole of it out, and finish it. What I do complain of is the purchasing in patches of uneconomic land at a fabulous amount of money instead of adding to these poor tenants.

47743. And you have given a reason for it. that if they were to buy in patches that way it would take a century to settle it?—I mean at the rate they have gone on in Erris up to the present.

47744. But remember that the Congested Districts Board has to-day an enormous tract of country. and that the policy of the Board is to buy all property straightaway. Do you not think that it must take an extremely long time for the Congested Districts Board to settle those properties, or do anything with them—do you not as a business man and shopkeeper see that in altering the face of the country by the action of a public authority, whether that public authority has compulsory power to acquire the property or not, it must take years and years to deal with that large tract of land?—I quite agree with that, but how is it that in non-congested areas where the lands have not been encumbered as in Erris five times as many purchases have taken place, and at a very reasonable number of years' purchase than on estates where it is more necessary that they should.

47745. You are now talking about the grievances of landlords and tenants?—Yes.

47746. This question of a public authority is a different question. Now I want to take this district of Erris and ask you a question. I understand you to advocate that the policy of the Congested Districts Board, the public authority charged with settling matters, should be to buy the whole of that peninsula and drain it—is that what you say?—To drain it where necessary. There is not so much drainage required inside as outside. The district where you travelled between here and Ballycastle, which is a mountainous district, is what would require it mostly.

47747. Mr. O'Kelly.—I understood you to refer to the whole barony of Erris?—Yes.

47748. Sir JOHN COLOMB.—I will take the whole barony. A considerable amount of drainage is necessary?—Yes.

47749. Now, is there labour enough in the barony to do all the drainage that is necessary—supposing you were dealing with a congested district and going to carry out this policy of yours, to buy the whole of the barony, which requires drainage, I want to know is there labour enough in the barony to carry out that policy?—Certainly.

47750. Plenty of labour?—Plenty of labour. It is very easy to find a number of young men, able-bodied men, that pass from here every year to Scotland to work six months at harvesting there, and if we had an industry of that sort in the barony of Erris we would have the labour of these young men at home, and there would be a certainty that they would work at very much less than they get across the water, and you would have more than you would want, in fact.

47751. What is the current rate of wages of the labourer here—supposing I am a farmer and want to get half a dozen men for drainage work?—One and sixpence a day.

47752. Do you mean to tell me that in the barony of Erris there would be labour enough at 1*s.* 6*d.* a day to drain the whole of the barony?—Certainly.

47753. Now, if there is so much surplus labour for half the year, why do not the farmers drain it now?—They cannot.

47754. I am very much struck with the weeds everywhere. If there is that surplus labour available, at all events for half the year at 1*s.* 6*d.* a day, why is so much left undone, and why is the country covered with weeds, even up to the doors of the houses?—I will explain that very soon. The very day they put the crops down the boys, and girls too, had to say, have to go. Immediately the crops are put down for their parents, for their father or their mother, these youths are off to England or Scotland. They have to go across there to earn the rent and to provide also for the sustenance of the household. They have, in addition to paying the rent of an uneconomic farm, to provide Indian meal, for that is what the unfortunate peasantry have to live on here for the balance of the season if the crop fails. Then how can they be here weeding the land when they are earning the rent across in Scotland?

47755. What time are they away?—They are away from about the 1st of May to August—three or four months in the year.

47756. What is the surplus labour doing here between September and April, the time they are here?—Well, at that time, six months of the year round here is the winter season, and the places are all flooded, and you would be for weeks through rain and storm kept to your hut, and there would be no chance of draining the land in that season, when it is lying flooded, and there is not dry weather.

47757. Is not it the case that draining is never done in the harvest time or summer time, but that it is always done between the months of September and April, and do you know of drainage work carried on at any other time of the year but that?—I am aware.

47758. Most Rev. Dr. O'DONNELL.—I wanted to ask you a question about those estates in Erris, and the purchase of estates in the barony of Erris. Owing to the migration to England the land probably has not received from the labouring population the amount of attention that would be required?—That is quite true, my lord. They cannot give it the amount of attention that is required, for I think I have described that they have to go over to earn the rent. That is common knowledge, and then if the year is bad they have to take home as much money as will buy Indian meal, the staple food for poor persons living here.

47759. Now, if the Board bought a block of estates in a portion of the barony of Erris, and wished to improve the agricultural methods as well as to enlarge the holdings, and drain and to some extent fence the holdings, do you think the people would be content to remain as tenants for a period of three or four, or even five years if necessary, in order that that remedial process should be brought to a finish before the tenants became peasant proprietors?—I am quite certain they would remain for a long time, much less three or four years.

47760. Do you not think that if this work is to be done it ought to be properly done in the way I suggest? Do you not think that the land ought to be held, and not transferred to the tenants, till the main drains are made, till the people have learned a good deal from agricultural instruction as to the cultivation of the enlarged holdings, and so on?—Quite so. I am quite certain even that the sons and daughters of the poor tenantry round here, if they had this land purchased here and little enlargements and better land, would come back from America to work here for a lifetime, and that they would all come from England to work here, and that there would be no such thing as going to England at all. One and sixpence a day would be better for them here than 2*s.* 6*d.* in England, or whatever they might earn.

47761. That is quite interesting, but I want your attention to a slightly different matter. You began by stating to the Commission that for the improvement of a district like this purchase should be made on a large scale—in other words, that estates should be bought *en bloc*?—*En bloc*, and right off; immediately. Because if it is to go on as it is going on, my lord, the people here will become quite disgusted. There are four years of the time passed now, and nothing done for Erris, out of 68½, a fraction of the time for paying up.

47762. Suppose we agree about that, is not it necessary that an improving authority, like the Congested Districts Board, having got a block of estates in a place like Erris, should retain them on its hands for two or three, or possibly five, years, putting them through an improving process before it transfers them to the tenants as tenant purchasers?—Well, my lord, the only solution for that is this: there are four years passed; why did not they formulate a scheme four years ago if they wanted to take them over for a few years?

47763. I only wanted your opinion, if you have one, on this matter. I will put it to you in a way you will perfectly grasp. Supposing the past is past, and that the Board has authority to deal with a block of estates, and that it makes up its mind that for the good of the people themselves the improving process is not one that can be gone through in a year, and that it must necessarily take two or three years, would the people on whose behalf that remedial process is being conducted, and who during it will have remunerative labour on their own lands, be content to remain as at present for two or three years or more while the process is being conducted, with the prospect at the end of it of being peasant proprietors, or will they insist on forcing the hands of the Board, and demanding an early transfer of the land to the people?—You are asking me the feeling of the people, and I am fairly conversant with the feeling of the whole of the public. I represent the greater division, and my knowledge of the feeling of the people presently, my lord, is that they have got so disgusted, looking at their neighbours across the bog having 8*s.* reduction on non-congested areas, where there is no congestion at all, and paying the full amount to the landlord—they have got so disgusted that nothing will satisfy them in face of this coming winter or coming spring, which promises to be a bad one, but immediate purchase.

47764. Mr. O'KELLY.—The question his lordship the bishop has put to you is one of far greater importance than you fancy, and I would like you to answer that before you become discursive?—My belief is that nothing short of immediate purchase will satisfy them.

His lordship will put it again to you, as it is a question of very great importance.

47766. Most Rev. Dr. O'DONNELL.—Perhaps it is a question that I should rather ask of one of the small farmers themselves, who work their holdings in the remotest parts of the peninsula. When a small farmer comes up this is a question I would like to ask him: "Would he be content to remain a tenant of the Congested Districts Board seeing his land improved"?—Oh, he certainly would say he did not mind how long he remained a tenant of the Congested Districts Board so long as he saw his house and his farm were improving, and that he would be earning on it. Why not? The people would be perfectly satisfied for four or five or even six years. The longer the better. As long as the farm was improving he would be perfectly satisfied, I am sure.

47767. Mr. O'KELLY.—The tenant would not care about remaining a tenant of the Congested Districts Board for two, three, four, or five years while the

Aug. 23, 1907.

Mr. John O'Malley.

process of improvement was going on?—Naturally, he would not; because he would also see his farm improved, and fences made, and he would be earning something himself.

47768. Sir JOHN COLOMB.—Provided he is paid for improving his own land?—Yes.

47769. Most Rev. Dr. O'DONNELL.—I will put that to you, just stating the case. He would be paid for the work that he did from day to day, and something would go on the holding in its improved condition to cover, to some extent at all events, the expenditure?—That is what I mean, my lord; because without it is improved there would be no use in living on it.

47770. CHAIRMAN.—I am afraid we must have to get on to the next stage?—I have something else I wish to bring under your notice—another grievance peculiar to Erris. I find that the amount given in parish grants in the County Mayo up to the 31st of March, 1905, for all Mayo is extraordinary. One union gets 50 per cent. of the whole of this county. I do not know if it has come under your notice before, but I have been looking the matter up, and I find from these figures that it is ridiculous on the face of it that Swinford Union should get £10,806 5*s.* 4*d.* out of a total of £21,857 4*s.* 3*d.* meted out to the whole county.*

47771. Most Rev. Dr. O'DONNELL.—Yes; if you go into the question of expenditure on different divisions of the County Mayo you cannot confine your attention merely to expenditure on Parish Committees; you will have to go into every domain of expenditure?—The Parish Committee expenditure is one item; parish banks is another item; and then you have the Agricultural and Technical Board another; but this is one Department now, my lord, with money practically common to all. It is Imperial taxes.

47772. But if you go into the domain of sea work, piers and harbours, you will scarcely find that in the Swinford division?—Because there are no seas in it.

47773. Mr. O'KELLY.—Give us the figures?—I will give you the figures, and they are remarkable to look at. Now in the Swinford division there is £10,806 5*s.* 4*d.*

47774. What is the total for the whole county?—It is £21,857 4*s.* 3*d.*

47775. Go on?—Swinford Union, £10,806 5*s.* 4*d.* You know the heading under which this comes—it is parish grants. Ballina Union, £1,428 4*s.* 6*d.*; Belmullet Union, £1,820 9*s.*; Ballinrobe, £597 7*s.* 6*d.*; Castlebar, £895 12*s.* 6*d.*; Killala, £80 6*s.* 6*d.*; Claremorris, £3,261 10*s.* 7*d.*; Westport, £2,758 1*s.* 1*d.*

47776. Most Rev. Dr. O'DONNELL.—The Parish Committee scheme was originally started to meet the condition of things in the Swinford Union, and from the Swinford Union it has spread all round, and it is a necessity of the case that in the place where it was originally started for there would be more expenditure under that scheme than elsewhere. But if you want to test whether this quarter of a million given to the Congested Districts Board is equitably or otherwise expended you should go into other departments of expenditure as well as the important one to which you have referred?—Well, my lord, there are some unions anyhow that seem to be living on grants altogether.

47777. Mr. O'KELLY.—Arising out of his lordship's question, have you got any grant in the rural district of Belmullet for other purposes save the grant from the Congested Districts Board of £450 for a bridge. Have you got any other grant?—We have got a grant from the Agricultural and Technical Board.

47778. I am talking of the Congested Districts Board. You have brought out rather striking figures, and I should like to put to you a question in connection with that. Have you got any other grant to the rural district of Belmullet from the Congested Districts Board—for piers and harbours, or boats, etc.?—Not that I am aware of.

47779. Other than the £450 for the swing bridge?—That woould be all that I know of, if you call it a grant from the Congested Districts Board. And the lace-making. There have been grants, I believe, puny grants of that sort. I could not tell you what they amount to.

47780. That has no relation to the Parish Committees, but his lordship suggested to you that possibly other grants might be given to the rural district of Belmullet that would make up for the apparent discrepancy?—Nothing of the sort. There is no comparison at all.

47781. Now, have any works been carried out Porturlin?—There are some repairs done there to slip.

47782. And at Portacloy?—Not that I am aware I could not say whether it is Portacloy or Porturl but there have been some repairs to a slip there so years ago.

47783. And at Inver?—Not that I am aware There has been no expenditure in the way of pi or harbours round here to my recollection, exc puny sums. There have been now and again, wh there is a slip, a few pounds spent on it; but twenty years there have been no such amounts there have been spent the two years ending 31 Mar 1905, in Swinford Union.

47784. Most Rev. Dr. O'DONNELL.—Did you ev hear of a parish grant being applied for in this d trict, and the grant being refused?—I believe th was some difference. I suppose we misconducted ou selves in some manner when we were refused a gra some two years ago or twelve months ago. I con not tell you.

47785. Was it for a reasonable cause?—Well, was some difference, I believe, between the Chairm and the people, if I do not mistake. I know in o parish, in Bangor, there was a difference, and heard there was a difference at Glencastle, and heard there was a difference somewhere else, but t amount of the moneys granted is what I look t Those moneys must have been applied for from her and must be common to all.

47786. You do not think it was too much to ha an application made for a Parish Committee gran —Too much to have an application made, my lor I would not think so.

47787. And then, again, would you expect that th work should be done in a proper way by the Paris Committee?—Otherwise they would never get th money.

47788. Have you any reason to suppose that wit application made and the work carried out in th usual way, there is any parish in Erris that could n have a Parish Committee and these grants?—I do n see any reason why any parish in Erris should n have a Parish Committee, and have its share o the aggregate. I see no reason why Parish Com mittee should not be peculiar to Erris as well as i any other union or district. And really the amoun are very considerable. They are Imperial taxes; an I understand that it is a grievance that we, the poore union in the whole County Mayo, should not be en titled to get our just share of these grants as well a Swinford, where there are men, I suppose, more ab than we are to make a claim. And then I do no know how it is.

47789. Sir JOHN COLOMB.—I want to ask you th question generally, to clear my mind. If you cann show that applications have been refused by the Con gested Districts Board to the Parish Committee, an that there are sufficient Parish Committees workin in this district, then I suppose you would admit tha it is the fault of the people in the locality, not th fault of the Congested Districts Board?—Well, I can not answer you, but I will inquire into it, or put th question here to know whose fault it is that we woul not get it.

47790. You could not give a concrete case from you knowledge as a public man, of a Parish Committe having been refused, but you have explained that yo do not know of an application by the Parish Com mittee, and therefore, that being so, I presume I ma take it from you that the fault lies, not with th Congested Districts Board, but with the locality i not having applied?—Well, I really think we ar very seldom behind time in asking in this district I do not understand how it is. I think it is th influence, as far as I can make it out, of the me applying in the other unions that accounts for thei giving them so much of these grants, comparatively speaking.

47791. Sir FRANCIS MOWATT.—Have you applied?—I am sure we have. I am certain.

47792. Have the parishes applied for grants fo the establishment of Parish Committees?—Yes.

47793. And have they been refused?—I believe they have.

47794. Can you give me the names of those tha applied?—Bangor, and some of the gentlemen givin evidence, who are on this Committee would be in a better position to tell you.

* See p. 240.

7795. You make a statement, and I want to get facts on which you really make the statement. I not disputing your statement, but I am asking the facts on which you make it?—What you d me is have we applied.

7796. I want you to give me the names of the ishes that have applied, and have been refused by Congested Districts Board. That is what I want know?—I have no doubt that they have all lied.

7797. That will not do. I am asking for the es of the parishes?—Bangor, I believe, is one.

7798. Most Rev. Dr. O'DONNELL.—Bangor and an- r both had grants. Some that applied did not them, but I think you will find that there was e difficulty about the way the business was done? es; I believe there was some difference between managers, or the chairman, and the committee.

47799. Mr. O'KELLY.—Have you got a Parish Committee in Belmullet?—I do not think so. I do not know. I am not quite certain.

47800. Sir JOHN COLOMB.—Do you belong to Belmullet?—Yes, I do.

47801. And you take a great interest in public questions; and, am I to take it, that you really do not know whether there is a Parish Committee or not?—I do not know. I am not quite certain. Yes, I hear now there is a Parish Committee here. I was not quite certain. The interest I take in this matter is purely in reference to the enormous amount of this money spent in one union compared with another, which you cannot dispute is quite correct.

47802. Your idea of policy would be to divide the Congested Districts Board money equally among the different districts. Is that what you advocate?—Yes, that we are entitled to just as much as Swinford, being as poor, if not a poorer, union.

Mr. FELIM SCANLAN examined.

7803. CHAIRMAN.—You are appointed by the Rural rict Council of Belmullet?—Yes, my lord.

7804. Tell the Commission what you have got to ?—I am a small tenant farmer, my lord.

7805. Where?—Glencastle. I have been Vice- irman of Belmullet District Council for the last t years, and Chairman of the Board of Guardians the last two years, and I have been bred and born Erris.

7806. Is Glencastle in the Mullett?—On the road veen here and Ballina, within four miles of the n on the Ballina road.

7807. What is the valuation of your holding?—5*s*.

7808. What is the acreage?—The acreage is about rteen acres, with a few acres of mountain land ed to it.

7809. Fourteen acres of what?—Of reclaimed cut- y bog, most of it.

7810. But the bog having been cut-away, it is all l which you can till?—Well, there may be a few s more. There are a few acres more reclaimable.

7811. But of those fourteen acres that you say e been reclaimed, all can be tilled if you had an portunity of tilling them?—No, my lord, there is reat part could not be. All the ingenuity of man ld not make it yield.

7812. What use do you make of it?—Let the cattle on it. There could not be any other use made it.

7813. Why is not it capable of being tilled?—It is good enough. There is nothing in parts of it gravel for twenty years.

7814. Does it grow grass of any kind?—Spots here l there.

7815. Not fit for cattle to feed on?—Oh, poor ding for a goat, part of it.

7816. This land is not of much use?—One part of I do not mean the whole holding, or anything e it, but part of it.

7817. What is the extent of the portion that is less?—About an acre, or an acre and a half.

7818. Out of fourteen?—Out of fourteen acres.

7819. You have got at least ten acres of land ich can stand tilling?—Well, I believe there are ween eight and ten acres. There is another part my holding which is not reclaimable, but still it is so bad for grazing purposes, because it is land t has been torn away by a river, and as the river ved to one side it has left behind it a bed of nes that very little skin has grown on, and it is possible to till that.

7820. But of those fourteen acres that have been laimed you think ten could be tilled?—I think ten ld be tilled and meadowed.

7821. Go on?—Well, I believe owing to the small s of the majority of the holdings in this union t compulsion is necessary, and I believe, for the fortunate state of the people that it could not be tered much unless the whole union is bought up the Congested Districts Board, or some other body powered to do so, and then the holdings enlarged ere possible. And where there is not a possibility of larging the holdings I would suggest that anywhere re is reclaimable bog adjacent to the small holdgs the Government should in some way assist the people in draining, reclaiming, and liming this mountain land, and that would in fact increase the value of those small holdings very much. My lord, if you allow me to make a general statement I shall endeavour to answer any questions put to me afterwards. There is another reason why I think that the Congested Districts Board should have power to buy out a large tract of land. Now, for instance, there has been a small estate sold here in this union called the Carey estate. That estate was made up of two patches of land, for they are nothing more than patches. The tenants used part of it as grazing land with the exception of what one tenant occupied. It is within quarter of a mile of Belmullet here. The other part of it is away in Rathhill, and it is thickly populated. Well, the holding of the tenant that resides adjacent to the grazing land has been enlarged without a penny expense to the Congested Districts Board, or to anybody else. Now, just alongside of him there is a very congested townland called Anticollaun, and if the Congested Districts Board had the power of compulsion they could have bought out Anticollaun, and they could have changed every holding in Anticollaun by the addition of a few acres of this grass land without a penny expenditure to the Board. Well, what has occurred now? If they gave Mr Noan a few acres they would enlarge his holding. They have to go to the expenditure of building two cottages, and that, I believe, will cost a couple of hundred pounds, or perhaps more—and will not the tenants have to pay this? And if they had the power of compulsion, the road runs through the very centre of this grazing land, and they could cut out a little patch for each of the adjoining men and change their holdings from uneconomic to economic without a penny expense to the tenants, and that would be a great matter to them.

47822. That is very interesting, but I should like to understand it completely. You tell us that there was a small property bought by the Board, as I think on the road between here and Glencastle?—Part of it, and another part of it six miles distant.

47823. Sir JOHN COLOMB.—To the east or west?—South. It is called Duyork.

47824 CHAIRMAN.—Is that near Lisshall?—Within a mile of Lisshall or so.

47825. Upon the Carey estate?—The Carey estate.

47826. You say on a little patch by the side of the road there lived one tenant?—One tenant, and the rest of it was grazing land.

47827. And the Board added some grazing land to this tenant?—To this tenant.

47828. And enlarged his holding?—Yes.

47829. And the rest of the land they divided into two holdings?—Yes, and they have to go to the expense of building two houses on it.

47830. They have brought in two tenants?—No, not as yet, my lord, because they have not the houses built. The Board occupies the land at present.

47831. They mean to bring in two tenants?—I understand so.

47832. They have created two new tenancies for this land which they purchased?—They have not as yet, but it is in the hands of the Board, and they intend to bring in two people.

Aug 23, 1907.
Mr. Felim Scanlan.

47833. It has not been settled where the people are to come from?—Well I am not in the secrets of the Board.

47834. What do you say that they ought to have done?—My contention is that they ought to have bought the adjoining townland. Anticollaun I think is on the Short estate. I do not exactly know, but I think the landlord is Mr. Short.

47835. Is that grazing land too?—No, it is tenanted. You have not understood me, I am afraid. I have stated that adjacent to this grazing land there was a congested townland, owned by another landlord, and if the Board were empowered to buy this landlord out, to use compulsion and buy this little estate out they could add to those holdings without having a penny of expenditure by giving each of them a little strip of this land that the road runs through, and it is within half a mile of each of them.

47836. And it comes to this, that you disagree with the policy of the Board in having created two new tenancies?—I do not, my lord; I do no such thing.

47837. Is not this what you object to, that you think that the balance of this grass land ought to have been given to the congested portion?—Living adjacent to it; for the sake of economy.

47838. And that if they bought that townland and added parts of this grass land to the holdings on that townland, that would have been a better thing than creating two new tenancies as they are doing by building these two new houses on the grass land?—I believe, where possible, that the people should not be disturbed, and I believe where possible, that the holdings should be enlarged without disturbing the people, because it would not be so expensive. And these improvements of course and all that are very good, but I may tell you that they are not so good for the farmer when he looks forward for 68½ years and has to pay it back.

47839. Yes, but it really must amount to this, that there were two ways in which this grass land could have been used?—Yes.

47840. One way was to do what the Board have done, create two new houses?—Yes.

47841. And the other way was to divide it among the congested population which you speak of who occupy land which of course would also have to be bought by the Board?—Yes.

47842. And I suppose what happens now is that those congested people see regretfully that the land which they hoped to get added to their holdings has now been used for the creation of two new tenancies?—No doubt they would be anxious to get it.

47843. Most Rev. Dr. O'Donnell.—The witness's point is that the Board should have compulsory powers. The point you have put to Lord Dudley, I think, is that the Board should have had compulsory powers to acquire that estate of small holdings so that they would have been enabled to carry out this process which you recommend?—Yes, my lord.

47844. Sir Francis Mowatt.—And so save the cost of building two new cottages?—Save the price of building two new cottages, and build those cottages on some extensive grazing ranch that the Board might purchase.

47845. Chairman.—Now, tell me another thing. This is very interesting. These congested people that you speak of on this townland that the Board ought to have bought are very poor at present?—They are very poor.

47846. I suppose a great many of them are migratory labourers?—Yes, my lord, very many of them.

47847. Do you imagine that if the Board had been able to purchase that property, and distribute some of this grass land amongst them, it would have so improved their position that they would no longer have had to go to England as migratory labourers?—Well, it would be a great attraction to them to stop at home.

47848. Do you think that the addition of this grass land would have enabled them to do so?—I believe that an ordinary-sized holding of £4 or £5 rent, if you add to that holding five or six acres, or even less, of good land it will be changed in its aspect altogether.

47849. Would it change it to such an extent that it would make them independent of wages earned in England?—Well, I cannot go that far, but I believe it would go a good way in doing so.

47850. And in your opinion still, although it would improve their condition, and make them more comfortable, it would not so improve their holdi that they could live on them without having to and earn money?—Well, I believe in the case o large family, with three or four grown sons, that, course, one might go away to assist the others earning when he has not earning to get at hom

47851. Some of them would remain on the holdi and the others go to England?—Certainly.

47852. I suppose it is an uncommon thing to f a family with two or three grown sons living at hor —No.

47853. Now, in cases of that kind, would not n of the grown sons go away?—The people are anxious to go away if they could live at home.

47854. But, as a matter of fact, do they not d at present, under present conditions?—Under p sent conditions they cannot do otherwise.

47855. They have to go?—Yes.

47856. And under present conditions it is rather uncommon thing to find a family with three gr sons at home?—It is rather, I believe.

47857. Sir Francis Mowatt.—The balance of land on which those two new cottages have b built, and on which two new tenancies are now be made, how much is that?—The thing is sm altogether. It is only a mere patch of grazing la The acreage I do not know.

47858. But about what?—Well, it may be ab forty acres as far as I know.

47859. And what is the number of small holdi amongst which you would divide it?—Well, I car exactly say, but I think there are, perhaps, thir or fourteen.

47860. Well, this additional land would not g them an acre a piece?—Oh, yes, forty acres woul

47861. Well, two acres at best among nine families?—Well, even so. Two acres of an addi to a poor man makes a great change in his fa Now, there are in the union of Belmullet 1,800 h ings of £4 valuation and less. Well, on very m of these holdings the little patches that are suit for tillage are in tillage, I believe, since time memorial. Well, that is a terrible state affairs. I call it an unnatural state of affa because land, to get the benefit that nature inten out of it, must get a rest. That man's holding miserably small, and he has to keep it in til year after year. He cannot give any part of i rest. He cannot practise modern farming or r tion of crops. He cannot lay it out in grass gather more strength, and that accounts very m for the weeds we see growing throughout the len and breadth of the country to-day, because if t man had fresh land to break in every few years, leave out the acre that he had in tillage for the four or five years, no weeds would appear because land would grow clean. In like manner on the g majority of our little holdings we cannot farm i advantage for this reason. Take a man with a level stretch of a farm, and with his horse plough, and modern farming implements. That r could get through as much work for the year ro as four of us together with our pick and sho And what is more, on some of the hillsides, as might see in taking a look through the countr which I would much recommend you to do—on s of the hillsides, even if we had them, we could work horse, cart, or plough. The people have carry the manure up to the land in many insta on their backs in creels like beasts of burden, they have to carry the scanty produce of the fa home to the stackyards in the same way. And t is a terrible state of affairs, and many of th people, I am aware, have to live for the most of year on Indian meal. Yes, gentlemen, without e a drop of milk. And a landlord would not even f his dog with that.

47862. Chairman.—Just let me on that point you this—the fact that ploughs and other agri tural implements cannot possibly be used on th holdings, I suppose, in many cases is due to nature of the soil, is not it?—Yes, the character the holding.

47863. The character of the holding?—Well, th are a good many townlands in this union built what is known as rundale, if you know anyth about it. Well, now, a man might occupy seven eight acres of land, and that seven or eight acre land might be scattered here and there in pat

he number of twenty-eight throughout the length breadth of a village. That poor man might only the one cow, and he has to stand up at that to prevent her from eating either his own patch otatoes or his neighbour's patch of potatoes that n the other side of it, watching her on what is wn as the path, and if he does not do it himself as to keep his child at home to do it.

7863A. When an estate is bought by the Congested ricts Board and reconstructed the rundale comes n end. Do you know any case in which a man , because of the rundale, was formerly unable to the plough, was then able to use the plough?—I w very little about the operations of the Con- ed Districts Board as far as land purchase is erned. They have got little patches, and that is only thing. I never knew about the purchases he Board.

7864. Now look at that map there of the barony Erris. All that yellow colour represents estates chased by the Board, so they have done a good deal re?—Well, most of that is in the union of house.

7865. You do not know anything about those perties?—I know very little.

7866. In your opinion, if the properties that you k of are in rundale were reconstructed that would ble the people to use the plough?—That depends he character of the land. I have already described t the construction of the land is such in places t a plough could not be used, or any farming lements but the shovel, spade, and creel.

7867. And, therefore, when you complain that the ple are forced to till the land with the spade and y the manure on their backs, and the produce of r holdings back again on their backs, that does necessarily mean that it is from any lack of on by the Board, but it is due to the nature of soil itself?—Oh, certainly; I never thought, my l, of accusing the Board of the construction of the

7868. But I say that in pointing that out you not suggesting that?—I am not in any way sug- ing it.

7869. Well?—I would also point out that the land Erris, I believe, for the most part is lime, and ainly every man of intelligence must admit that e on a soil properly drained makes a great change the better. There is a limestone quarry at Glen- le, where I live, and the people are prevented by landlord from carrying away this lime and king use of it.

7870. Sir JOHN COLOMB.—The people are pre- ted, you say?—Yes, sir. I do not blame him. I ld suggest that the Congested Districts Board uld build a limekiln, which would not cost very ch. There is any amount of mountain land ad- ent to the place, and there could be any amount turf got, and very cheaply, to burn this lime and tinue quarrying it and burning it for the year nd, and selling it out to the tenant farmers at a ninal price, or at a small price, and, failing that, would suggest that the Board, or the Government, some other Department, should approach the land- d—it is called the Atkinson Estate—and purchase people's right to go there and carry away the ne and burn it to lime the land.

7871. Most Rev. Dr. O'DONNELL.—Where is that ate?—Glencastle, my lord. As a proof that the l is deficient in lime we can hardly grow a turnip p, but it is attacked by a very destructive disease wn as "finger and toe." There are, I believe, er insects in the land that are very injurious to ps, and I believe the lime would kill them.

7872. Sir JOHN COLOMB.—Are you speaking of re- imed bog land?—I am speaking of the land gene- ly, for I believe the whole of it, with the exception patches along the seashore that have been manured th sea manure is deficient in lime. I do not be- ve that part is deficient in lime, but any land that is sea manure has not been used on is, I believe, ficient in lime. Now we are, I am sorry to say, in e present year, face to face with what threatens to one of the worst years that I remember, and it is ther humiliating to have to refer to these things often as we have, unfortunately, but the potato op in my opinion is going to be a worse failure an last year. The people were advised to spray tensively, and they did so. Some of them even rrowed the stuff in order to spray and save the op that they were depending on for their livelihood. But the potato has been attacked by another disease known as Ball Bân. I suppose you do not understand Irish.

47873. CHAIRMAN.—I think it would be, perhaps, for the general convenience of the Commissioners if you would speak in English?—I am sorry you cannot speak Irish, for I would prefer to give my evidence in Irish.

47874. Most Rev. Dr. O'DONNELL.—There are two of the Commissioners who speak Irish—Mr. Sutherland and myself?—I am glad to hear it, and what is more, I hope that you, my lord, also will set about learning the Irish language, and that the next time you come round you will be able to take my evidence in Irish.

47875. CHAIRMAN.—Go on?—Well, the potato crop is attacked by a disease known amongst the peasants as Ball Bân or White Spot. It attacks the stalk. I do not know whether it is produced internally or attacks it externally, but in any case it is attacked by a worm. There appears a white spot on the stalk within a few inches of the soil, and the result is that the stalk si poisoned and it dies, and whatevr chance you have of getting potatoes under a blighted stalk you have no chance whatever of getting them under a stalk with Ball Bân. That disease has played havoc this year I believe owing to the wet. In any case if the potatoes continue to fail as they have been doing for the last few years, I believe the people must resort to something else for a livelihood. Now, what I suggest, and I suggested it four years ago I believe, to six members of the Congested Districts Board, who happened to visit this little isolated spot of ours, the building of a corn mill in some central district of the union for an experiment. Now, we look upon the potato crop as the most important part of our tillage, and we use almost all old manure on it, except what we use to top-dress meadow. What I suggested to the Board was that if they built a corn mill in a central district we would set less potatoes and grow more grain and apply the manure that we used to buy to the patches of the grain, and that we would force a grain crop, and that we would not be so much dependent upon the potato for our food. I am sorry to say that Father O'Hara of Kiltimagh, was my chief opponent on that occasion. I think in any case that it would be a very wise thing to do. It would entail only very small expenditure, and it would be a good experiment, and now, with the prospect of having prime land given to the people back once more, we could have introduced into the district spring wheat, and the poor man would be able to grow a crop of spring wheat, and it would save on the average £4 or £5.

47876. Do you recollect on what ground did Father O'Hara oppose it?—I do, my lord. Of course he almost convinced me at the time, because I am rather easily convinced. He told me that in other parts of Ireland where mills were working satisfactorily some ten or fifteen years ago they were, to-day, useless. Well, times have changed here a little since, because at that time Indian meal was not within a few shillings—I think four or five shillings—of being as dear as it is at the present time, and as the Indian meal is the most thing we purchase and live on, and there is a prospect of it not being much cheaper I think than what it is at present, I think that if we had the mill the people would make a shape to grow corn, and have it ground, and it would be a very good food for both man and for beast.

47877. Most Rev. Dr. O'DONNELL.—Do you think that if we could find a substitute for the potato for convenient use it would be better to go in the direction of grain crops than to cultivate parsnips and other root crops?—I believe in the grain crop, my lord.

47878. I want to ask you a question about that. Is there a natural disadvantage to the districts that are much exposed to the sea breezes from the fact that the wind sometimes destroys the grain crop?—Well, some years it occurs, but not very often. Very often the corn is shaken, but still and all we have to run those risks.

47879. There is nothing of a peculiar disadvantage in the district in that way?—Well, I believe there is on account of it being so much exposed to the gales of the Atlantic.

47880. CHAIRMAN.—Were there corn mills here in former days?—I do not remember one.

47881. Mr. O'KELLY.—What would be the probable cost of that mill?—Well, you have put me a question that it would take an expert to answer.

Aug. 23, 1907.

Mr. Felim Scanlan.

47882. There is a good deal of common sense in the suggestion. It would solve a great deal of the Western difficulty if you could find a substitute for the potato?—There is another thing that occurs to me, that the smallness of our holdings is in great part, if not chiefly responsible, for the recurring of distress that takes place. I believe that the small and miserable character of the people's holdings is chiefly the cause, at least of a great part of the distress, that so often occurs here; because I am more or less interested in the matter myself, and being so I have striven to take stock of things as we move along in this weary world, and I have noticed that those with the very smallest fields were the people who year after year had to be employed on the relief works started by the Government. There is no chance of a man with a few acres of land getting on. No matter how industrious he is he cannot. But if a man has a reasonably-sized holding, and that he has a hard struggle to rear all his family, by and by when his family grow and are able to assist him in the farm work that man will often turn out to be independent in a small way.

47883. Most Rev. Dr. O'Donnell.—You put it strongly a while ago when you pointed out very truly that the addition of two or three acres to the holding of an industrious man made an enormous change?—An enormous change, my lord. Even one acre of prime land added to a man would make a terrible change.

47884. Chairman.—Apart altogether from the question whether the holding is good, bad, or indifferent, the smaller the holding the less the time of the holder would be occupied in tilling his holding, and looking after it, so that it is not presumable that if the Government start works in a locality the people who would be naturally most free to work upon those works would be the people who had to spend least time on their own holdings?—And had the smallest holdings.

47885. And had most free time. I suppose a man who has got a holding of considerable size, a man like yourself, for instance, will have his time pretty well taken up by looking after his holding, and it might therefore be a little difficult for a man who has got a considerable holding to devote his time to anything else, such as works which the Government started?—That might be, but at the same time, in a house where there are two or three men, we will say a father and a son or two, one of them could go to the work, and the other two could attend to the farm.

47886. But have you noticed that where relief works are started by the Government there are not men working at those relief works whose fathers or other relatives have holdings of considerable size?—Very seldom you will find a father or son from one of the larger holdings working on them.

47887. No representative of that family working on the relief works at all?—Well, very seldom it occurs, as far as I know—very seldom. Another thing I think the Government should undertake to do is the afforestation of the large mountain tracts we have here in the West.

47888. And how do you propose they should do that?—Some Government Department should take it up, and be authorised by the Government to do it, and expend some money, and afford the people some earning in years of distress like what this is going to be. It would be a great advantage to the country in every way, compared with the form of relief which has been given in past years.

47889. You would like to see those mountains in the barony of Erris planted?—I would like to see great patches of them here and there planted. In the first place it would change the aspect of the locality, and it would have other effects that I have not eloquence enough to describe.

47890. Do you think it would help the grazing of Ireland to have the mountains planted?—I do not mean to plant the whole of them.

47891. But I suppose the prospect of any profitable return depends to a considerable extent on the fact of being able to plant a large tract?—A fairly large tract here and there.

47892. If the Government were to plant with any prospect of getting their money back or any return for the money spent it would mean that they would have to plant a very considerable tract. Do you think if they did that there would be any trouble?—To what extent?

47893. I suppose the whole mountain side. Do you not think that that would cause trouble to the grazing?—Well, it would interfere for a time with the grazing, no doubt, because cattle could not roam the mountain. What I would suggest is that where th is a thousand acres of mountain land I would the Government fence in 20 or 30 or 40 or 100 a of that and plant it.

47894. That would be all no good. They wo never get any profitable return from 20 or 30 acres Twenty or thirty here and twenty or thirty th and so on.

47895. Sir John Colomb.—That would double treble the expense, and, as a matter of fact, noth less than a thousand acres block will ever bring real remuneration and make it profitable?—You m a thousand acres in one block.

47896. In one block?—I understand.

47897. That is what is done in other countr when there are patches of forest, and it has been s gested to us. But I want to know from you as local man whether if they began to do that it wo cause great trouble with regard to grazing, and t people who have the grazing now would say: "H is this Government turning us out of our grazing —Well, the grazing of a good part of the mountain of very little value on those elevated hills. Th may be some little places that are fairly good cattle, but on the elevated parts the grass of it almost valueless.

47898. Do you not think that if the mountain w taken away the value of the grazing would be ve much enhanced?—There is very little value left a great deal of it, I assure you.

47899. Mr. O'Kelly.—There could be planting provide shelter?—Yes, to provide certain shel belts. But it would be different from planting on extensive scale.

47900. Could not trees be planted without in fering with the grazing?—I believe they could, b not to the extent of a thousand acres in a block.

47901. But you are of opinion that a great deal good results would accrue from reasonable plantin —That is my belief.

47902. And without injurious effects to the stoc —Yes, or to the people either.

47903. And no interference with grazing?—Ve little.

47904. Sir John Colomb.—I have listened with t greatest possible interest to your evidence, and th are just one or two questions I should like to ask y in order to see whether I really understand yo points. Now, is your own valuation £4 5*s.*?—Y

47905. And the acreage fourteen acres?—Yes.

47906. And what is your rent?—£5.

47907. And out of fourteen acres on the avera what do you find it profitable to work in tillage- do not press you for details, but roughly?—We that is a rather complicated question, because I ha no help but myself, and I till what I possibly c of it, and I would till more if I could have help.

47908. But taking the rough and the smooth, wh do you say on an average you think you have in t lage?—Well, between tillage and meadowland, whi I class as tillage, because I have to manure it.

47909. It is a rotation crop?—I have betwe six and seven acres. Well, that I could not keep tillage if it was not that I use half a ton, and so years over it, of artificial manures every year, alo with what manure I make on the farm.

47910. I presume you would not do it otherwi and you find that by treating your land in that w it pays you to use artificial manure?—I believe does, although it is very expensive here in the We so far from where it is manufactured.

47911. May I take it that you are an exception, would you say that the mass of holders of valuati of about £4 or £5 use artificial manures also?—Th do. It is extensively used. There is a ton of it us to-day to the hundredweight that was used thir years ago.

47912. Have you got any other business besid your farm?—Do you mean any business that wou be of a remunerative nature or bring me in money?

47913. Yes?—No, sir; nothing but the shovel a spade and the creel on my back.

47914. And have you been in England or el where or in America?—Yes.

47915. You will understand I do not want to pr you to give information?—I have been both in En land and America, and I have laboured hard in bo places.

47916. Yes. Now, you told us about tillage. Wh is the average of the stock on your farm—I ask y because I take you to be an exceptionally intellige man, who has given us admirable evidence, and

to get information?—Well, I generally keep or ten cattle, and graze them for half the time neighbouring farm.

917. That is, in addition to paying rent you have ke grazing?—No, but I graze these cattle and or them on a neighbouring farm.

918. Yes; in addition to your rent?—Yes; in ion to my rent.

919. And you keep about nine or ten?—I keep or ten on the average.

920. Can you tell me how many of these are —what is the general average nature of the stock w many of the nine or ten are cows?—Well, are, of course, a few of them milch cattle, and a two-year-olds, and a few calves; and what is I have to hand-feed these cattle almost the round. I force a crop, a grass crop, and I cut the summer time, and throw it to them. Of e they would not live or thrive if I did not do At least they would not thrive on the grass.

921. I take you to be a type of what I should to see more of generally in Ireland. With a ed holding like yours, you work your holding on nixed system?—Yes. My holding is too small, I have lost. I am both a sober and industrious and my parish priest will bear me out in that, I am a very hard-working man; and I am eighteen or twenty years married and living in this holding eighteen or twenty years and I have noney in it rather than have made.

922. You put capital into it, I suppose?—Yes. I some of the capital into it. In any case the le means disappeared, whether it is in the land-s pocket, and I believe there is a good deal of it, here is very little of it in the tavern.

923. Did you inherit the farm from your father? s; both from my father and grandfather. It held by my grandfather's people for generations.

924. There is only one other point I want to ask about—the two cottages on the Carey estate. said that if your view had been carried out it ld have been without a penny expense to the gested Districts Board?—Yes, or to the people that d get the land afterwards.

925. I do not exactly understand that. Do you h at much less expense?—I say they would have xpense, and I will prove it to you. Now, the runs through the very centre of this grazing h, the mail-car road to Ballina, and on this road congested plot is situated, right adjacent to this e grazing patch. The fact of the road running ugh it could be taken advantage of, and they d give each of the adjoining tenants three, or , or five acres as the case might be, and stripe ut, and let themselves fence it, and there would be one penny to pay for it afterwards. I am not plaining. Do not understand me as complaining he Congested Districts Board creating two new ings. I am not. I wish they did it on a larger e.

926. I do not suggest that at all. You have been t fair and most liberal indeed; but I only want now this. To carry out your policy the Congested ricts Board would have had to buy the property, egin with?—Yes, with compulsory powers.

927. But how do you make out that would involve a penny expense?—The only expense it ld involve would be the striping of it, and that ld cost very little. I call it no expense, in fact.

928. Now, you say that if you had a small hold-such as you have entirely in tillage you could not a rotation of crops?—I could not.

929. I should think that would be the very place which, if it was all in tillage, the tillage must be otation, and I do not understand it?—Now, I will and explain it to you. On very many of the small dings there are a good few acres of land that could possibly be tilled except at great labour and ex-se. Well, the few acres that could be tilled are ays kept under tillage or in tillage. Well, I do call it a rotation of crops when I set potatoes on patch one year and oats the following year, or ley or rye, as the case may be, or a turnip crop third year. I should be situated in such a way t I would have sufficient land to allow me to lay t down in grass seeds for two or three years more.

930. Now I understand what you mean, that the d being so limited you cannot have a rotation of ps of grass?—Quite so.

931. Now I understand. I did not understand fore. Now, you have talked in a very clear way about the difficulties of working where you could not employ horse labour?—Yes.

47932. Now, you have been in America and in England, and you have evidently kept your eyes open and thought a great deal about the matter. Do you state that any holding can really be classed as an economic holding that cannot rely upon horse labour —would you draw the line between an economic and an uneconomic holding by the fact that a horse can be kept and must be kept for the purpose of the farm? —No. I believe a holding could be economic even though a horse or cart or plough could not be used on it. If it is sufficiently cheap a man with a little family could work it to advantage with the spade and the shovel.

47933. Then, the Commissioners take your opinion as this—for I may put it in this way—that a farm may be economic where, as you describe, the manure has to be carried on people's backs like beasts of burden, and everything that has to be done is done by employing men and women, as you describe it, as beasts of burden. You think, nevertheless, that the Commissioners may consider that an economic holding?—No; I would not go that far.

47934. Now, would you clear it up, because I am very anxious to get your opinion?—No; I would not go that far. What I mean to convey is this, that although a farm could not be worked by horse labour, still that that farm can be economic by the farm being sufficiently large and the rent or annuity sufficiently low. On farms where there is a difficulty in working, in the fixing of a fair rent, or in the fixing of the purchase annuity, that farm, or the holder of it, should be given a substantial reduction to assist him in some way in coping with the difficulties that he was confronted with in the working of his farm.

47935. Now, taking a £5 farm, do you mean to say that it would be made economic by cutting it down by 50 per cent.?—I never suggested that. That is a question I do not understand.

47936. What I gather from you is that the question of whether a farm is uneconomic or not depends on the rent?—What I call an economic farm is a farm that a man can live on in some form of respectability and bring up his little family as they should be brought up, in some sort of respectability, and not be forced by circumstances or by bad years to bow and bend and crave from Government or anybody else.

47937. Now, take a £5 holding and apply your own principle. You consider that the circumstances may be such that a holding of a valuation of £5 may or may not be economic?—It may or may not.

47938. And can you picture to yourself a holding of £5 valuation that is not economic becoming economic by the rent being cut down to £2 10*s*.?—Well, yes. I say £2 10*s*., although it is a very small sum, makes a big difference to the farmer. Very often a man can purchase a little calf for £2 10*s*., and if he has that calf it may, in a few years time, be worth treble the money; and in like manner he might purchase with £2 10*s*. artificial manure, and if he uses that on the land along with dung it might be terribly better in a few years, and the £2 10*s*. might be worth £7 to him.

47939. There is only one other point I wish to ask you about. You told us of your proposal to the Congested Districts Board about mills, speaking of corn mills?—There were a few gentlemen from the Congested Districts Board. The Rev. Mr. Green was one of them, and Father O'Hara was there, and the other gentlemen's names I do not remember.

47940. Now, when his lordship the Chairman asked you to develop that idea you went on to explain about this country growing spring wheat?—Yes.

47941. And you have been in America, where spring wheat is grown?—Yes, and winter wheat.

47942. And with your experience, do you really think, taking the climate into consideration, that it would be possible to grow spring wheat in this district of Belmullet?—Yes, I believe there are patches where it could be grown. I do not mean to grow it generally, but that there are patches here and there that would grow a fairly good crop of spring wheat by being forced with manure.

47943. But patches of spring wheat would not surely keep a mill going?—But if you have two or three thousand inhabitants or occupiers, or owners, as we will be, I hope, in the course of time, and every occupier or owner grows from half an acre to an acre or more, say, an acre of wheat and an acre of

Aug. 23, 1907.

Mr. Felim Scanlan.

oats, barley, rye, and so on, I think that would keep the mill going.

47944. Does anybody grow wheat?—What would they grow it for when they have no means of grinding it?

47945. Do you think that is the reason they do not?—I believe so.

47946. Am I to take it from you that in your opinion, from your knowledge not only of this district, but of other countries, if you had the means of grinding wheat in a mill here, you would yourself devote any part of your land to the growing of wheat?—Yes, I believe I would force a crop of wheat by a proper method.

47947. I am extremely obliged to you for all the information you have given so clearly?—(The witness replied in Irish).

47848. Mr. O'Kelly.—The position of Erris is not altogether a very enviable one at present?—Indeed it is not.

47949. It needs attention and reconstruction from end to end?—Yes.

47950. And that is a work that cannot be accomplished in a day or two?—Well, it would not take very long to do it—a few years.

47951. You heard the question put by his lordship the Bishop to Mr. O'Malley?—I did.

47952. I want to get your view upon that point. His lordship asked Mr. O'Malley whether the tenants would be willing to remain tenants of the Congested Districts Board for three or four years while a remedial process was going on. Do you think there would be any objection on the part of the tenants to remain tenants of the Congested Districts Board for three or four or five years, during which time money would be expended by the Board on general improvements?—I believe the people would object to it, and I myself would strongly object to it for reasons I will give you.

47953. I should like to know the reasons?—In the lands held over by the Congested Districts Board for years there is to be an enormous lot of money expended upon those improvements. The people believe that they have to pay this money back, or at least the most part of it, and is not that the fact?

47954. I suppose you heard something about the Dillon Estate?—I know very little about it.

47955. But you have heard of it?—Yes.

47956. And would you be willing to see a repetition of the methods of the Congested Districts Board on the Dillon property in Erris?—Well, I speak for myself. What I would like to see is this. Let the people get the ownership of the land as cheaply as possible, and the minute you create a man the owner of the land, that minute let that man set to work determinedly to improve the land. For, give an industrious man the ownership of a rock, and he will convert it into a garden, and all those improvements that are so necessary will be effected by the people themselves in the course of time. Where is the use if I am employed by the Congested Districts Board at eighteen pence or a shilling a day for improvements on my land—have I not to pay that money back?

47957. I put it to you like this. Theirs is an exceptional position. It needs to be striped, drained, fenced, reconstructed from top to bottom?—I might agree with that.

47958. I put it to you as a man of great commonsense that that will take some time—is not that so?—That is so.

47959. Bear in mind that the Dillon Estate was far and away better off when it was purchased than Erris is at this moment, and it took some time, and the work that was done was well done. And you want to have Erris drained and reconstructed from top to bottom?—Yes.

47960. I put it to you, would not it be a wise thing to have the rents of the tenants going to the Congested Districts Board afterwards spent in improvements, whereas now the rents go to the landlord and are not spent on any reproductive works at all?—Yes, provided the tenant had not to pay that back again.

47961. Always conditionally on that. I suggest that he has not?—But it is my impression that he has.

47962. Most Rev. Dr. O'Donnell.—Take this case, Mr. Scanlan. Suppose there is a man in a remote part of the barony of Erris with a large tract of water logged land. Is not it better for him, ev if he did not get labour in draining that land, have his land given to him in a drained conditi provided the expenditure were properly made, th given to him in an undrained condition with charge for expenditure?—I believe with the exam set by the Congested Districts Board already that the lands are bought and the people given ownership of the land the people themselves will fect those improvements. That is my contenti and I prefer that, my lord, to having gangers a bosses and the mischief knows what sort of me going round visiting, and having the poor people pay this back again to the Congested Districts Boar or to the Government.

47963. Now, let us understand one another. The are two classes of cases. On the one hand you ha farms which might be transferred to the occupie with advantage, because, subject to the occupiers b coming tenant-purchasers they themselves are qu capable of improving them, and they will impro them under the spell of ownership. But on t other hand, you will find districts where the land saturated with water and where the people have u to this done very little to improve it, and where n one man is quite capable of addressing himself the situation at all, and where the country side ca not, in fact, be improved unless under a gener system of improvement. Drains cannot be made b one man without the co-operation of others, and eve if he could do that he has not labour and capital enable him to drain his holding thoroughly. I put to you that it would be for the advantage of th man to have his holding drained. I say if it drained it would be an advantage to him, because drained holding with an addition to the annuity is better bargain than an undrained holding with smaller annuity. And the next point is this, that i the draining process he would himself be employe And the third point is that whatever addition is p upon the annuity because of the expenditure on t drainage that man gets the money at 2¾ p cent. interest?—Well, you see, my lord, on the farms that I have described as held in rundale t land is fairly well drained, and as I have stated ov and over again, the moment you give a man t ownership of the land he will proceed to improve it

47964. We are agreed about that?—Well, what would suggest, my lord, in cases like that is this. would suggest that the Congested Districts Boa where they have taken over the land and where th have aided peasant proprietorship, and where th have invested the land in the people, should empl a few engineers and send them round to the reco structed farms to mark out those lines that the drai should be made on.

47965. Possibly, although your experience is wi in this district, the class of land to which I have ferred has not come under your observation, and shall have an opportunity of listening to other wi nesses from the barony of Erris who will say that t remedial process should be conducted before the tra fer to the occupiers?—Yes, but what I object alt gether to is this—placing a future tax on the peop that would perhaps handicap them afterwards life, if you expend £30 or £40 in improving a far and that has to be paid back by the future owne That is what I want to clear up and understand.

47966. Why is that a difficulty? Is not it to paid back, not out of the original farm, but o of a farm three times as good? Where is the dif culty? Is not it as good as giving a man a seco farm, improving the farm in this way?—But is not better yet for the man to improve it by his own labo and not have to pay for it?

47967. I will answer that for years improvemen would be carried on which would give ample occup tion to an improving tenant and his family, b there are other improvements which an improvi tenant and his family will not be able to face themselves, and which can never be done unless th are done on a broad scale?—Perhaps you mean, m lord, the large drains that might run, say, betwe two villages or in the centre of a village, or t planting of fences. Do you mean that as part it.

47968. That is part of it, but I also include reclamation of land that should be reclaimed in d tricts where men have not been accustomed to reclai much, and do not know much about it?—I belie

elf that the question has been dealt with as I e it will be in the near future, and I long for it elf, for I long certainly to see the day when this rian dispute will cease, when landlords and nts can shake hands, and join in one great d of Christian brotherhood for the uplifting of people. I long for that day certainly, but when question comes to be settled I would suggest that he case of any holding that could not be enlarged on which there is reclaimable mountain land, the ernment should come to the assistance of the le, ad encourage them to reclaim this land. By ning and liming it could be easily done. Now, friend, Mr. O'Malley, spoke about some mistakes r the Parish Committee Scheme. Well, it ht be right for me to state, as one connected with Committee, as a member of it since its inception Erris, that the Congested Districts Board could point to one irregularity in its administration us in the last nine or ten years. I think it is t I should state that. At Belmullet, of course, nave been made a small grant of £100 annually. l, we generally have some of the £100, a small of it sometimes unexpended, and it may appear he Congested Districts Board that "This grant of 0 is sufficient for these people because they did succeed in expending the £100 we gave them last ." Well, it is right for me to explain that. are, my lord, a member of that Board. I hope will remember what I say.

7969. I am paying every attention?—We made a grants of £100, and we have applications for the le of the £100. Some of the applicants, although have applied, and are made grants, declined he end of the year to perform the work, with the lt that they withdrew their applications, and it ny contention that the committee should make nts to others who would be willing to apply for grants in time provided they had the opportunity loing so.

7970. The fact that you did not expend the whole 0 is no argument that you could not expend a h bigger sum?—We could expend £300.

7971. It is not a bad grant?—I am not complain- of it. I would like it to be more, although it is enefit to myself. I cannot take advantage of it, rtunately.

7972. Mr. KAVANAGH.—Just to go back to the t that we have been arguing already. You ct, I understand, to the Congested Districts Board ling an estate while they improve it. Is that so? hat I say is that they should invest the land as n as possible.

7973. First you object to their holding it while r improve it?—I object to that, certainly, and I ngly object to the Congested Districts Board hold- land over five or six years. It is all a humbug.

7974. But would you object to them holding it as as five or six years?—I would object to them ling it any longer than at the outside a couple of s, and I think that would be ample time for them ffect improvements.

7975. How could they carry out large improve- ts in two years?—By plenty of labour.

7976. Could they get sufficient labour in the ntry to effect large drainage improvements in two rs?—Have they failed in succeeding in getting ur in any place where they have started their ks?

7977. I cannot tell?—Neither can I.

7978. Mr. O'KELLY.—Suppose it was perfectly r to you that it would take three or four, or five rs on the part of the Congested Districts Board to nstruct the barony of Erris, would you object to Congested Districts Board having the land on r hands for that period of time?—If it was ually necessary for them to hold the land for a iod of three or four years, I could not grumble.

7979. You would not grumble?—I could not mble, but I would prefer that the tenants should given the ownership of the land as soon as possible, I left them to themselves to effect the improvements the land which they would do when you make m owners of it.

7980. Mr. KAVANAGH.—I can quite understand ir effecting improvements on their own farms, but ld they effect a large drainage improvement on the ate?—You mean untenanted land?

7981. No, the tenanted land. How would they carry out a large scheme of arterial drainage?—Well, I suggested a while ago that in cases like that the Government should appoint an engineer or two to go over the country and, if necessary, build these main drains by labour. And could not that be done although the people had the occupation of the land.

47982. And charge it to the improved area?—I would not be for charging it to the tenantry. For, listen, now. The Government or the Congested Districts Board want to do something for the uplifting of the people here. We are every other year crying out, and we have good reason, that there should be something done to put an end to this, and that the people will then become more self-respecting and we will not be forced to be craving as we have been in the past and having those demoralising relief works.

47983. Now, take an estate on which there is rundale. How could that be sold direct to the tenants?—That is an exception. I think I suggested the striping of that to the tenants of it a while ago in my evidence.

47984. And that would mean the Congested Districts Board holding that till they had striped it?—Yes, sir.

47985. And you do not really object to its being held—you only object to a very prolonged holding of the estate?—Yes.

47986. And not while they are carrying out improvements?—Yes, and where possible giving the people the ownership of the land.

47987. CHAIRMAN.—You have given extremely interesting evidence, and I will not keep you more than a minute or two longer. We have understood from you that it is your opinion that the ownership of the land should be vested as quickly as possible in the tenants because, in your opinion, and I am not disagreeing with it, where the tenants obtain the ownership of their land, they are disposed to make considerable improvements themselves?—That is my belief.

47988. And then, I think also, in answer to Mr. Kavanagh, you have stated that although tenants will improve land themselves, once they get the ownership of it, there must be certain things like reconstruction, main arterial drainage, main roads, and main fences, and the reconstruction of holdings which are very necessary?—That is so.

47989. Which have to be done by the Government before the estate can be properly transferred to the tenants, and, therefore, in answer to him, you agreed that while that is being done, it is necessary for the Government to hold the land?—I believe it is; where the works are really necessary, I believe it is.

47990. There is only one other point that I wish to trouble you with on that. You have said on more than one occasion to the various Commissioners that in your opinion it would be a great mistake to put on an additional annuity or an additional sum on the holding for those improvements, and thereby, in your own words, to saddle the tenant with a responsibility that he might find it very hard to bear in the future?—That is so.

47991. And now I want to point out the problem which the Congested Districts Board have to consider when they are doing these things. We admit, of course, that to carry out main drainage or re-construction, or main roads, requires a certain amount of money, and naturally the Congested Districts Board have to consider that while doing these necessary improvements they do not want to lose more money than they need, because that makes it impossible for them perhaps to make improvements in other parts if they spent too much money. Now, there are two ways in which those improvements can be done. The first one is by holding the estate for two or three years, collecting the rents and then spending all those rents on the improvement of the property?—Do you mean collecting the old rents or the future annuity?

Well, I think, collecting the old rents.

Most Rev. Dr. O'DONNELL.—They used for some time, but latterly it is the reduced rents.

47994. CHAIRMAN.—But at any rate they collect the rents and they spend those rents?—On the land?

47995. The whole amount would go in making those improvements. That is the first way. Now, for the second way?—Then, my lord, excuse me, is not that going to be paid back? Will it not be a future tax on the tenant?

Aug. 23, 1907.

Mr. Felim Scanlan.

47996. No. Wait a minute. I will try to explain it to you. If you hold a property for three or four years, collect the rents, and spend those rents upon the improvements you will then have at the end of the three or four years to re-sell the holdings to the tenants at the original annuity without having put any additional annuity upon them. If, on the other hand, you do what you suggest, namely, that the Board should purchase an estate, should spend out of its own money certain sums on the improvement of the estate and transfer the holdings as quickly as possible, then if the Board are not to lose a large sum of money, they have got to get back some of the money they spent by increasing the annuity to the tenant?—I understand you now, my lord.

47997. So that you see, Mr. Scanlan, from your point of view it comes much cheaper to the tenants themselves if the Board hold the property for three years, because they give back the biggest part of the revenues of the estate. If they transfer the holdings at once and make the men owners, then, in order to get back money which they spent they have to get it back by putting an increased annuity on the holder?—Well, the increased annuity is what I object to.

47998. Most Rev. Dr. O'Donnell.—But would you object in the case Lord Dudley has mentioned?—No, if I understand him, and I think I do.

47999. Lord Dudley does not suggest that the holding should carry an increased annuity except something that would increase the agricultural value is put upon it?—Yes.

48000. Chairman.—From your own point of view, you are desirous of getting the ownership of the holdings at as low an annuity as possible?—Yes, my lord.

48001. I would ask you to consider whether that process is not best accomplished by the Board holding the land and spending the revenues rather than by spending money out of their own pocket and getting it back by an annuity?—Quite right, provided they spend the rent that is charged to the land and that the future tenant is not bound to pay back any of it.

48002. That is it. That is the whole point?—I did not quite understand. In fact it was not put clearly by——

Mr. O'Kelly.—By me?—Well——

48004. Most Rev. Dr. O'Donnell.—I think I was the culprit. It is well to be clear now?—I quite understand it now, my lord, I think.

48005. Lord Dudley had pointed out that if the process of re-construction is conducted for two or three years the expenditure will be expenditure of the rent on the property?—Yes.

48006. And that you distinctly wish?—Yes.

48007. But you are not to understand that if a farm, owing to main drainage being conducted on a large scale on the estate, has its agricultural value doubled, through that expenditure, no increase will be put upon the annuity in consequence of the improved value of the holding. It will carry a higher annuity, but one that it can much more easily carry than the lower annuity in the improved state?—As far as I am concerned that puts a different construction on my understanding of it. I understand I am a small tenant-farmer paying £5 a year rent. The Congested Districts Board buys the property and then expends the £5 a year on improving my property. I understand, my lord, that this is what you mean to convey, that although the property was held, and this money expended on it, I was not going to pay anything as a future annuity for that money expended.

48008. Chairman.—It is much easier for the Board to spend money and to make improvements on the estate without having to put an increased annuity on the tenants, for they can have the advantage of collecting the revenues on the estate, and spending those revenues for three or four years on the estate. But now your objection is removed. I remember that you told us you were easily persuaded. You told us that you have some cattle. At what age do you sell your young stock?—At different ages.

48009. Generally at what age?—Sometimes at three years old.

48010. You do not sell them younger than that?—I do, sometimes at two years old. I have not many to sell—one or two at a time—three at most.

48011. You never sell them so young as six months or a year?—No.

48012. You find it pays you best to keep them till they are two or three?—Well, it does.

48013. If you sell a two-year old or a three-year old have you any notion where it goes when you sell it?—I do not know.

48014. Who is the buyer?—He may be a local man or he may be a stranger.

48015. If it is a stranger, do you know at all where the stranger comes from?—Very often I make no inquiries.

48016. It has never interested you to inquire?—No.

48017. Do you think if your farm was a little larger that you would keep your animals longer than you do?—I might be able to keep them longer than I do, but my animals would be much better if there could be a couple of acres of good land in addition to what I have. I would call it a fairly nice holding because a couple of acres of good land would make a terrible change.

48018. That would be obvious?—Yes, they would have a pick of condition. A man would have a corner to put a pick of condition on them before selling.

48019. Suppose there were two or three more acres to put a better condition on them would you be inclined to keep them longer?—We generally keep them as long as we can possibly keep them. Circumstances force farmers to sell.

48020. Because his holding is so small that he can not get the condition that he would like on them?—Not that, but he is often pressed for money, and then when he sells a beast he has often the price of it borrowed or the value of it in stuff, or to pay rent or taxes or seed loan. There are so many calls on the poor man that he cannot afford to keep a beast long.

48021. Most of the young beasts are sold not because the owner of them thinks that a judicious moment to sell them, but because he is pressed?—I believe in a good many cases that is so, my lord.

48022. Sir Francis Mowatt.—Assuming that a man can afford to keep his cattle for three years, do you say it is a better bargain for him to keep them three years and sell at three years or to keep them two years and sell at two years old—which is the best bargain?—It depends on how a man is able to feed his cattle for the two years. A good deal of it depends upon that. If your farm is such that you can keep a beast growing gradually from its birth till it is two years old it might pay the rent.

48023. Is that the best time to sell it?—Yes.

48024. Sir John Colomb.—You have described to Lord Dudley what you do for keeping beasts. Could you do that if you did not hire grazing? If you had no grazing to hire at all would not your position be entirely altered, supposing you could not get grazing?—But there will be grazing till the end of time. I will explain to you how. Suppose you had not a farm in Ireland to-day larger than £30 worth of land, we will have extremely poor people and a good many better-off people at all times, and a man with a holding of £20 might not be able to stock it, and his better-off neighbour with a small holding could afford to get grazing from him.

48025. I want to make this clear—what you are able to do to keep cattle depends on getting outside grazing. You actually do pay for outside grazing?—I could not feed the number of animals that I do feed if it was not for this mountain grazing that I have from a neighbour.

48026. And therefore you would be more forced to sell—you could not feed them so long?—No, owing to the smallness of the holding.

Rev. J. J. Hegarty examined.

Rev. J. J. Hegarty.

48027. Chairman.—You are nominated by the Bishop of Killala to give evidence before this Commission?—Yes. The Belmullet Union has an area of 179,245 acres and a valuation of £10,942. The population is 13,835, and the poor law valuation per head is 15*s.* 10*d* The lands under grazing in Erris are valued at £1,378, and if the valuation of these be deducted the valuation per head of the population is only 13*s.* 9*d.*

48028. Is there anything lower in any part of Ireland?—For the whole poor law union this is the

est in the whole of Ireland. There may be individual electoral divisions lower, but for the whole on I think that this is the lowest. The district ot congested in the sense that we have not enough land. There is quite as much land in Erris as ld give 15½ acres to every person in Erris, but the l is extremely poor. The population is almost rely agricultural, and along the seaboard there a mixed fishing and farming population. We e a coast line of 336 miles in the barony of Erris. whole barony is larger than the County of th by 46 square miles, and larger than the nty Carlow by 10,000 acres. In reference to the ous classes of houses, there are 512 houses in is with only one room, there are 1,086 with two ns, 91 with three rooms, 41 with four rooms, and houses with five rooms.

3029. In your opinion is valuation any real test poverty?—I give the valuation to point out the gested condition of this district in present circstances. I think that in Erris the valuation and ulation are a test of the poverty. The people e to live by the land.

3030. I suppose that the valuation was originally d when a good deal of the land now cultivated unreclaimed?—Yes, but I really think that the uation in Erris is relatively high and that the ds in Erris are valued high.

3031. Might not you have a holding which has practically created since Griffith's valuation, ch at that time was valued merely as mountain d, and since that time by the work of the tenant been turned into a holding; it may not be very d, but still it is a holding which, if it was reed, would bear a totally different value from t at which it at present stands in the books?—re is no doubt that if there were a revaluation e would be a modification, but some holdings e deteriorated. Before 1848 there was more land ivated in Erris than there is at present.

3032. Which at that time would have borne a ner valuation than now?—Cultivation has gone k.

3033. Even so, it shows that valuation which has an existing state of things for the last fifty or y years is not invariably a true test of the pre- condition of the people?—It is not, but it is the liest as well as the roughest test that we can ly.

3034. It is the only test that many of us have got? es. There are 2,297 holdings in Erris. Of these 52 are valued at or under £4, 272 are valued been £4 and £8, 76 at between £8 and £15, 25 been £15 and £20, and 62 over £20. Since 1878 we eight seasons of acute distress in Erris, during ch the Government had to come to the relief of the ple by establishing relief works or public works some kind.

3035. Sir Francis Mowatt.—Those were the times which the relief works were established?—Those e the specially bad years in which the Government ught it necessary to establish relief works in order enable the people to live.

3036. Most Rev. Dr. O'Donnell.—That would be year in three or four?—Yes. The first matter that ould wish to deal with is the price of land before since the passing of the Act of 1903. Before 1903 e were a few small properties purchased. There e two cases of property purchased by one landlord n another. One of these properties passed at ut four years' purchase of the valuation. This perty was bought for £450, and is valued, I think, £120. There was another small property bought ough the Landed Estates Court about the same e at 9½ years' purchase. The Congested Districts rd bought two properties in my parish, one at and the other at 10 years' purchase. There were or three other properties that were offered to the d Commission, at, I have heard—I have no direct fidence, but I have heard it on very good authority 0 years' purchase, but the sales fell through ng to the fact that the Commissioners did not sider the lands sufficient security for an advance 10 years' purchase money.

3037. Sir Francis Mowatt.—Ten years' purchase ney on the rent?—Yes.

3038. And not on the valuation?—No; these e on the actual rental.

3039. Chairman.—I understand you to say that or to 1903 you had experience of four cases in which property was sold. One was from one landlord to another at four years' purchase; the second was also from one landlord to another, but at 9½ years' purchase—of the valuation or rent?—I think the valuation.

48040. Then there were two more purchased by the Congested Districts Board, one at 10¼ years' and the other at 10 years' purchase of the rental?—Yes.

48041. In addition to that there were some properties the sale of which fell through because the Land Commission did not consider that 10 years' purchase was secured?—Yes. In one case the Land Commission was asked to advance 10 years' purchase, and refused.

48042. Mr. O'Kelly.—What property is that?—A property in the neighbourhood of Bangor purchased at 19½ years' purchase.

48043. What is the name of the property?—It was, I think, the Blacker property. It is now in the hands of the purchasers.

48044. Before the Act of 1903 the Land Commission refused to regard that property as security for 10 years' purchase?—Yes.

48045. Since the passage of the Act the property has been sold at 19½ years' purchase of the rents?—Yes, directly to the tenants, with the game reserved.

48046. Are the rents the same?—I think they are the same rents.

48047. Sir John Colomb.—In each case was it second term rents?—In neither case. They were all first term rents.

48048. Mr. O'Kelly.—Do you think it is good business from the point of view of the State that land that a few years ago was not regarded as sufficient security for an advance represented by 10½ years' purchase should be sold for 19½ years' purchase?—It is because I think it is not good business that I have brought the case before the Commission.

48049. Sir John Colomb.—The lower offer that was refused by the Land Commission was before the Act of 1903?—Yes.

48050. You don't know what Land Stock was then: did not a man get £12 or £13 per cent. more than was represented by the stock which he got?—114 was the highest it went to. It was not so high at that time; but even so it does not make up the difference.

48051. Mr. O'Kelly.—Can you give any explanation of why the value of the land should go up from 10½ to 19½ years' purchase?—To my mind, the intrinsic value of land has fallen, and the only reason that I can see for the advance in the price is the difference in the annuity under the new Act as compared with the old. There was £1 5s. sinking fund under the previous Act, and there is only 10s. under this. That enables a very considerable advance in price to be made.

48052. Can you give any justification in the enhanced value of farm produce for the advance that has taken place?—I think that farm produce has not advanced in any way in price. It has fallen.

48053. Mr. Kavanagh.—Have you ever compared the difference between ten years under the old Act and ten years under the new; what difference does it make to the tenants?—Ten nine-sixteenth years under the old Act was the same as thirteen under this. It produces an identical initial annuity.

48054. Chairman.—That is assuming that land stock was at par and that they get cash now?—Yes.

48055. If the land stock was at 13 per cent. premium that would mean an addition?—Yes. I have looked at it from the point of view of the tenant who has to pay the annuity.

48056. Most Rev. Dr. O'Donnell.—Viewing it from the tenants' point of view, what figures have you got?—The property offered formerly at ten years' purchase I would consider value for that. It was sold recently at nineteen and a half; but I say that ten nine-sixteenth years' purchase under the Act of 1896 would be equivalent to thirteen years' purchase from an annuity point of view under the present Act without the bonus.

48057. Under the Act of 1903 the annuity goes on for sixty-eight and a half years?—Or more.

48058. Under the preceding Acts it was no longer than forty-nine years?—Under the 1896 Act it was to terminate in forty-three or forty-four years.

48059. Mr. Kavanagh.—Was the ten years' purchase on first term rents and the other on second term?—Both are first term.

48060. Are you quite sure of that?—That is my belief. Recently the Board bought two other properties

Aug. 23, 1907.

Rev. J. J. Hegarty.

in Erris. The lowest price that they have paid for them is seventeen years' purchase. I approached a number of landlords myself—I think all the landlords who have land in the parish—and asked them if they would sell and on what terms; a number of them replied stating that they would sell. The principal landlord in Erris asked twenty-six years' purchase, on first term rents, the same price he said that he was asking for lands in Westmeath. Several landlords have not stated any price. In a few cases they have asked to have offers made to them, and in other cases they have answered questions that were not put, but they have stated their willingness to sell.

48061. Sir JOHN COLOMB.—Does not the difficulty simply arise on the question of price?—I do not see how a price can be arranged when the landlord does not specify his price.

48062. But you are aware, I suppose, that in the question of sale the landlord really has to consider how he will stand after the sale?—Certainly.

48063. I presume you would not expect the landlord to sell if in the result he is to lose some income?—No.

48064. Therefore, if there is a gap between what the landlord can take and what the tenant can give do you think it is the landlord should bear it or the State?—To the first portion of your question should the landlord suffer in consequence of the sale, I say no; but I know that in several cases the landlord would benefit considerably by the prices that would be offered by the tenants.

48065. Am I to take it that in your opinion, with reference to you own experience, although the landlord will benefit by the terms offered by the tenant, he will not accept them?—Yes. He expects to benefit still more by holding out.

48066. Then it is a question, in your mind, of the amount of benefit?—It is a question in his.

48067. Do you think if the principle was established that the price to be given by the purchasing authority when the transaction is completed should leave the landlord exactly as he was as regards income, no difficulty at all would arise in respect of these questions of transfer of land to the tenant or the public authority?—I am certain that the landlord who asked twenty-six years' purchase would be as well off with eighteen years' purchase as he is at present.

48068. CHAIRMAN.—Is his estate held under a mortgage?—To the extent of £40,000.

48069. The whole of it is fully mortgaged?—The whole of it.

48070. Then it is a fact that an estate that is mortgaged up to the hilt can be sold more cheaply than an estate that is not mortgaged?—Yes; still that landlord asked twenty-six years' purchase.

48071. When you say that it could be sold to give him his present income of eighteen years' purchase that is only because that estate is mortgaged up to the hilt; if it was not mortgaged it could not be sold at that price?—No; but the rent is first term, and if it were properly revised the equivalent of eighteen years' purchase, twenty-one years' purchase, would certainly pay him.

48072. Sir JOHN COLOMB.—The rents are revised by a constitutional authority?—Most of the rents here unfortunately are still standing as first term rents.

48073. A great number of these first term rentholders must be entitled to go into court for second term rents. That rests with the tenants and not with the landlords?—Yes, but when you are dealing with a class of tenants who find it very hard to get enough money for food and clothing, there is a difficulty about going into court. They have small holdings of only £2 10*s.* and £3 rent, and have nothing to sell, and very often the expense of taking a case into court would be far greater than anything that these poor people could lay hands on.

48074. You think that that is the deterring cause which has prevented several of these men from taking advantage of the Act?—I think it is the cause why several of them have not gone into court.

48075. Mr. O'KELLY.—That is a very important statement which you have made, and I would like you to elaborate it more. You say that landlords now asking twenty-six years' purchase would be able to secure their income from eighteen years' purchase?—The landlord in this case is very heavily mortgaged.

48076. Who is the landlord?—Mr. Carter. I have liberally allowed for expenses of a sale, and investing the money at 3¾ per cent., he would have a better income than he has at present.

48077. Have there been any negotiations on h estate for the sale of his property?—He was appli to several times.

48078. What was his answer?—His answer w twenty-six years' purchase, the same terms he w asking for his lands in Westmeath.

48079. What was the reply of the tenants to th demand?—The reply that I made on behalf of the te ants was that he would be very fortunate if he ev got twenty years.

48080. You say that if Mr. Carter got eighte years' purchase of his lands he would secure his n income?—More than his net income.

48081. He asked for twenty-six years' purchase?- Yes.

48082. In addition you have to give Mr. Carter t bonus?—I took the bonus into account in making th calculation. The bonus on twenty-six years' purcha is 3·12 years' purchase of rent.

48083. That is equal to over twenty-nine years' pu chase. Then there is the additional bonus owing the state of the money market. He gets cash instea of depreciated stock?—Yes. I will refer to that late

48084. In any case your view is this, that althoug the landlords all over the country have said that the are willing to accept their net income, here is a co crete case in which the owner is not satisfied with h net income?—His terms show that he would not b satisfied with his net income.

48085. Have you any means of ascertaining wha the net income of Mr. Carter is?—I made it m business to come as close to it as I could witho getting a statement of it from Mr. Carter. know a great deal about the property, knowing ho it is mortgaged and how it is managed, and i coming to the conclusion at which I have arrived made a liberal allowance for sale and agency ex penses.

48086. Of course you are aware that the landlord representatives have been saying all over the countr that they are willing to settle this land question o the basis of their securing their net income?—I sa it stated.

48087. Is that your experience of them?—The state ments that I have made show that it is not.

49088. Sir JOHN COLOMB.—This property is heavil mortgaged?—Yes.

48089. Is it in the court?—No.

48090. Presumably the landlord is solvent?—Yes the landlord is solvent.

48091. Have you made allowances in your calcul tion for paying off of all mortgages out of the pu chase money?—Yes.

48092. Suppose the books of the landlord showed th case to be somewhat different from what you state, suppose you would not expect him to reduce his offer —I would expect him certainly to reduce his offe because I am positive that the books could not sho that he could require twenty-six years' purchase t produce his net income.

48093. This calculation of yours is based upon suc information as you have been able to collect, whic after all, is not authoritative?—No, not quite.

48094. I merely put this hypothetical case. Sup pose on an examination of his books it transpire that twenty-six years' purchase would only give hi his net income, would you then say that that landlor ought to sell at less?—In every case where I or re presentatives of the tenants approached a landlor in Erris the first statement was that we wished t give such a purchase price as would give him his ne income. We never asked for anything else.

48095. Did he or those acting on his behalf contra dict the statement that you have made and explai that your offer would not be suitable?—We did no actually make that offer as a body, because we saw that we could not come within touching distance a all.

48096. Finally, do you or do you not consider that if for the public good a policy is put in force, n class in the country, whether landlords or tenants should suffer as a result?—Certainly not.

48097. Therefore, if the State adopt the policy tha they want this land from the landlord to re-settle i they must give him his net income—would you con sider that a correct policy for the State to enforce?— Yes.

48098. Do you consider that if the result of th adoption of that policy causes any loss the loss ough to fall upon the State rather than upon any class?— certainly, upon the State.

8099. Mr. O'Kelly.—Why should the loss fall on the State?—The individual should not suffer.

8100. Individuals suffer collectively, as represented the State?—In this case there would be no suffer-, whatsoever.

8101. Mr. O'Kelly.—The sale and purchase of d ought not to differ from the ordinary processes general commerce—why should the State suffer, be-se when you talk of the State suffering you talk out everyone of us suffering?—Why should the ndlord get more?

Sir John Colomb.—My whole basis is that the ndlord should be left exactly as he is.

8103. Mr. O'Kelly.—But you open up a big nomic question by that—why should the State fer?—If I were asked should the State suffer I uld distinguish. If the landlords' net income is ely to decrease in the immediate future I would e that into account, and I would not place that rden on the State, but if it were reasonably sup-sed that his net income would not decrease, then he ould get it either from the tenant or from the ate.

8104. If the present state of agriculture goes on, all probability the landlord will have his rents duced still further?—I presume that that would be ken into account in considering the amount of dge that would be necessary. Already the State s by establishing the bonus adopted the responsi-lity of supplying the deficiency.

8105. Do you confine the probable loss to what the nus represents?—I do not know that there is any obable loss at all.

8106. You are willing, of course, in common with friends of the tenants all over the country to give the ndlords their net income?—Certainly, net income on ond term rents or their equivalent.

8107. How do you arrive at the net income?—After the legitimate outgoings in connection with the rking of the property as it ought to be worked are ducted, the balance I look on as the net income.

8108. What percentage should be deducted from e gross rental to make it net?—It varies very con-derably in Erris. I know some cases in which the ndlords have not been getting 50 per cent. of their oss rental.

8109. Generally speaking, what percentage would u say represents net income?—In sales 20 per cent. rtainly ought to be deducted.

8110. Don't you think that in negotiations for sale d purchase between landlords and tenants the books the landlords should be submitted to representa-ves of the tenants?—I think it would be a very asonable way of doing business.

8111. Have there been negotiations for sale and rchase between the representatives of the tenants d the landlords in Erris?—Every holder of land Erris has been approached over and over again.

8112. Why have these negotiations failed?—Be-use the landlords have been asking more than the lue of the lands, and in the second place because e landlords are not willing to sell to the Estates ommissioners or to the Congested Districts Board, t want to make bargains directly with the tenants.

8113. Irrespective of the advice of the Estates ommissioners or of the Congested Districts Board?—es, irrespective of the interests of the locality.

8114. Who are these landlords?—Mr. Carter in ne case, Mr. O'Reilly in another.

8115. Did you approach Mr. Carter?—Yes, he is ne man who asked twenty-six years' purchase.

8116. What did you say in reply to that?—I said he got twenty years' purchase he would have got ne full value of his land, and that, in my opinion, e would never get twenty. I approached him on ehalf of the tenants, and he was written to by the District Council, and he gave the same terms to both, think.

8117. When you approached him he said he would ot take less than twenty-six years?—He stated that hat was his price.

8118. Did you say that you would not be able to ffer more than twenty?—No. I did not make any ffer at all.

8119. Did he approach the Congested Districts Board?—I am not aware.

8120. Did you approach him afterwards to ask im whether he had approached the Congested Dis-ricts Board?—All the replies given by the landlords were sent on to the Congested Districts Board, and it is my impression—I cannot speak with authority—that the Congested Districts Board wrote to every landlord and asked him to send on the usual application or schedule.

48121. I understand that after you had approached Mr. Carter you referred him to the Congested Districts Board?—Yes.

48122. Have you any idea what happened afterwards; did the Congested Districts Board do anything?—I heard that the Board wrote stating that they had received this letter from the District Council, which was sent to every landlord in Erris. In reference to Mr. O'Reilly's property, I wrote to him, as the major portion of his property is situated in my parish, and he stated that 4*s.* in the £ would be the highest deduction he could make—24½ years' purchase on first term and non-judicial rents. The valuation per head of the population on that estate is the lowest in my parish, being only 7*s.* 4½*d.* Some of the tenants afterwards went into court and got reductions varying from 4*s.* to 5*s.*, averaging, I think, about 4*s.* 6*d.* There are two other small estates that I would like to refer to. They are in the Land Court. One is the Dominic O'Donnell and the other is the William Burns' estate. The tenants on the Burns' estate were approached fifteen years ago. They then had judicial tenancies. They were asked to give their permission to have their land striped, with a view to sale of the place to them. They consented; the place was striped, and some of those tenants have not yet been restored to their tenancies. They have been kept there as con-acre tenants on the place since. They have been paying in a great many cases the old rents on new holdings, and of course the place has not been sold; but the principal mortgagee on that property has been trying to negotiate a sale privately, stating that this property is now more valuable because it has con-acre tenants instead of judicial tenants. That has happened under the management of Judge Ross's Court.

48123. Chairman.—What is the meaning of that reference to the fact that the tenants hold in con-acre and are not judicial tenants?—That there is no dual ownership in the property, and the landlord can therefore sell the tenant's interest as well as the landlord's interest.

48124. Sir John Colomb.—I understand you to start from the point that the tenants were judicial tenants?—Yes.

48125. How did they cease to be judicial tenants?—The land was re-striped, as it was concluded that there could not be any sale until the holdings were consolidated. They were asked on behalf of the Court to consent to the striping on the understanding that it was to be in the interests of the tenants. They consented; and this has been construed into a surrender of their judicial tenant-right, although they never meant it. But whether they meant it or not, it was an extraordinary thing that it could happen under the management of the Land Judge, that an estate was being offered as more valuable on account of that consent.

48126. This illustrates what you consider a hardship on the tenants not inflicted by the landlord at all, but under the Court?—Yes. The O'Donnell property has been offered again and again. It has been offered to the Congested Districts Board and to the Land Commission. It has been valued and revalued, and a sale has not come about, because the Land Judge is insisting on getting more than the place is considered to be worth. The tenantry on the O'Donnell estate are, as a rule, the most needy. Whenever there is a bad year they are practically the first to be in need of relief.

48127. But this was done under the Land Court, not in the interests of the landlord at all, but in the interests of the mortgagees?—It is not in the interests of the tenants, at any rate.

48128. But the Court has got control by reason of the action of the mortgagee, and its action is determined, not by the interests of the landlord at all, but by the interests of the mortgagee. I am not arguing that it does not affect the case of the tenantry?—With regard to the price of land, there is a suggestion that I should like to make before passing from that section. Owing to the discount at which Land Stock is being issued at present, the cost to the nation is entirely too great for the transfer of land, so that there should be some alteration

Aug. 23, 1907

Rev. J. J. Hegarty.

in the law in connection with the issue of capital. £100 in cash paid on behalf of the tenants is costing at the present moment £136 11*s.* 8*d.* That is more than the price of a perpetuity at 3 per cent. Taking Land Stock on the present basis of £82, there is a discount of £18. The Land Stock that is issued for that costs £21 19*s.*, and the bonus of 12 per cent. requires £14 12*s.* 8*d.* in stock. These sums represent the amount of stock that has to be issued to enable the tenant to pay £100 cash to the landlord. I would suggest that the interest on the Land Stock should be increased to 3 per cent., leaving the sinking fund as it is at 10*s.*, and that the landlords should get two-thirds of their purchase money in Land Stock rather than in cash. If that were done the country would not suffer from the terrible discount rate from which it is suffering at present.

48129. Sir FRANCIS MOWATT.—I would merely point out that if you increase the rate of interest which the country must pay then it is merely increasing the debt in another way. If the country is to pay ¼ per cent. more on the issue of the stock of course the result is to make it identical with the present issue?—The farmers would have to pay then.

48130. It would fall equally on the farmers—it would affect the amount of their annuity?—To the extent of five shillings in every £100.

48131. Most Rev. Dr. O'DONNELL.—It is in contemplation, then, that the farmer would not give so many years' purchase—is that the inference you are coming to?—Yes. That is why prices were not so high under the previous Acts, because they had a 4 per cent. payment.

48132. A 4 per cent. annuity would cause a considerable number of farmers to hesitate before giving it?—Yes. Twenty-five years' purchase would represent the gross rental.

48133. CHAIRMAN.—That system was practically done with when the Act of 1903 came into force?—I believe that there would have been more land sold in Erris had the 1903 Act not come into force. Landlords who were willing to sell at fourteen or fifteen years' purchase then are asking twenty-three years now.

48134. Mr. O'KELLY.—Suppose that the bonus were added under the Ashbourne Act without the Act of 1903 at all what would have been the result?—In the poorer districts you would certainly have had more sales than now.

48135. Why do you say poor districts?—Because in the poor district the prospect that the landlord has in view now is to make a fortune, not his net income at all. He sees that it is possible to get such a high price under the new Act that he is trying to get it. He saw that he could not get such a price under the old Act or anything like it, and he was willing to a great extent to sell.

48136. Suppose that there was a bonus of from three to five years' purchase added on to the old Ashbourne Act?—It would hasten sale under the old Acts immensely.

48137. Do you think in that case would there have been any necessity for the Act of 1903?—Not in congested districts.

48138. I mean anywhere?—I cannot say.

48139. Sir JOHN COLOMB.—Is not it a fact that the reason of the introduction of the 1903 Act was that the previous Act had ceased to operate by reason of the unwillingness of the landlords to sell on the old terms, that the field of landlords in a state of insolvency had been exhausted, and that therefore additional inducements had to be provided in order to make purchase effective?—I think that sales were going through up to the very last moment. Even in 1902 there was a very considerable amount.

48140. Are you not aware that that was the reason given by the Government?—I know it was given. I am speaking for congested districts. I know properties that were being offered.

48141. CHAIRMAN.—You suggest that two-thirds of the purchase money should be paid to the landlords in stock?—Yes.

48142. With stock at eighty-two?—If there was 3 per cent. on it it would then be at ninety-four, according to the price of Consols.

48143. Your idea is by increasing the interest to enhance the value of the stock?—Yes.

48144. But if it was at any discount at all the landlord, in order to get his net income, would have to have a larger number of years' purchase than he would if he were paid in cash?—He would, but it is expected that gilt-edged securities will not alwa keep so low as they are. Possibly in five or s years it might be even above par, which would hast the sales. The state of agriculture in Erris is v backward. Much of the land is in rundale. course before selling they require striping, fencin draining, and some reclamation. While that being done, the people would be more or less ed cated to the management of their holdings. Aga there should be a considerable effort made for t improvement of live stock in Erris. Since the C gested Districts Board gave up supplying the breedi animals to Erris, Erris has suffered very considerab But even under the Congested Districts Board. t horse-breeding scheme was not a success in Erri Instead of the horse-flesh of Erris being better th it was before they commenced, I think it is co siderably worse.

48145. Mr. KAVANAGH.—To what do you attribu that—to the class of animals sent here?—Yes.

48146. Have you any hackneys here?—Unfo tunately, we had.

48147. They did not improve the breed?—They a not suitable for Erris.

48148. Most Rev. Dr. O'DONNELL.—Before passi away from draining and fencing, it would be interes ing if you would state whether, in your opinion, would be an advantage, that land needing improv ment should be held in the hands of the Board for certain number of years pending the improvemen rather than given over at once to the tenant pu chasers?—I hold that it would be absolutely necessa for the improvement of the district for the Board, some similar body, to retain it for from three to fi years, according to the amount of work to be done.

48149. Would you say what class of work y contemplate as being the best class of work to do?— The land has to be re-striped, and the holdings ma as compact as possible, and there is some fencin of the tillage land, and draining, and these thin cannot be carried out by the tenants themselves.

48150. Sir FRANCIS MOWATT.—You are speaking arterial drainage now?—Yes, but that is necessa before we have drainage of any kind; because all t grazing lands are held, and will be held in c tenancies and they should be utilised too for th draining. I know this from experience that I ha myself—I think it was in 1897—when I had a co siderable amount of relief money in hands, g through the people of Manchester. I was laying out on draining. I found that in several cases ev the tenants would not agree to drain their own lan though it was needed very much. Before one ma could drain it might be necessary to pass through th whole townland, and one crank might upset the who arrangement. One man under the direct purcha system could do the same thing. Their interes might not be identical, and even people more intell gent than the poor unfortunate farmers of Erris c not always see what is best for themselves to do. So think that it would be absolutely necessary to do th striping and fencing of the tillage lands and the mai drainage and some reclamation before the land wou be handed over. There would also, of course, rema the question of the improvement of the houses.

48151. Most Rev. Dr. O'DONNELL.—Do you consid that the reclamation should be of such a class as t be a model and a lesson to the farmers in carryin out works for themselves?—Yes. I know that the Co gested Districts Board has done a little in that wa on one of the properties that is sold down my way t the tenants; because it is a rather difficult class c reclamation and took a great amount of labour. Th tenant would never be able to do it himself and h would not do it. It is the best plot of land he has and it is adjoining the public road, and is a lesson t all who pass that way.

48152. Has it been sold out to all yet?—Yes.

48153. Has anything been put on to the annuit for the expenditure?—The Congested Districts Boar dropped a considerable amount. They did not put o what would recoup the expenditure.

48154. What view would you take in this case. Sup pose that there were a very big drain constructed a considerable expenditure and that in consequence o this expenditure the agricultural value of the hold ing was considerably improved, would you, in such case as that, consider it equitable to expect from th annuity a considerable proportion of the expenditur

has produced this great improvement?—Cer-ly. Speaking on behalf of the tenants, they ld like as little as possible to be put on them; I think it is highly desirable that these improve-ts should be effected and something put on for because if they are improvements of the proper they will much more than pay for themselves.

155. You consider that it would be very much r for the tenants to have their farms drained in way, and something put on for drainage, than ave them transferred quickly and in an unim-ed condition?—Yes, I think certainly that some-g should be put on, and the four bones of the should be done by the improving authority.

156. But you would leave an ample field for the ner and his family afterwards?—There will al-s be an ample field in Erris for as much labour an possibly be found in Erris if they know how to it to account. The lands are poor and will al-s require labour to keep them in condition.

157. What view do you take of reclamation by family; do you consider that there is land in s which can be reclaimed with economic advan-?—Probably the tenant or his sons would earn e if they were somewhere else, but as things are rris they employ their time well in a great many s by improving or reclaiming the lands.

158. And is not value consolidated on the hold-on which the family grows up of a higher class value in mere money?—It is.

159. From the human and social point of view is it a useful thing to have the family engaged in ding up their own conjoint interests?—I should h prefer to see the people of Erris working on r own lands than working in England and Scot-l, where though they earn considerable wages for uple of years it is never satisfactory in the end.

160. Sir FRANCIS MOWATT.—Just explain that. s a very important question. What do you mean aying that the result is never satisfactory in the ?—A great many young boys get into bad habits in England and Scotland, after they have been g there for three, four, or five years. Some of them their health, and come home invalids or paupers, you rarely find one of them who has spent a con-rable time in England or Scotland coming home turning out respectable.

161. You consider that to remain the class of ple you desire them to be it is good for them to re-n once a year or so to their native homes?—It is ssary.

162. On the same principle don't you consider t it is the greatest advantage to the family who have uired the habit of working on their native farm, putting all their spare labour into the improve-nt of it?—I certainly look upon it as an ideal e to see the people employed on their own land, roving it and upraising their status.

163. Once the improvement of the farm begins member of the family is afterwards in a position ay that there is nothing for him to turn his hand —He has something there to look to always and ething continually to improve. Once a tenant into the habit of improving his land he sticks to

164. Sir JOHN COLOMB.—Before we pass away n the question of improvement, assuming that policy is carried out that you suggest of the gested Districts Board acquiring land, draining and all that, what is your view on the subject of maintenance of those improvements? Let me put oncrete case. The Congested Districts Board, in rying out the re-settlement of an estate makes an rial drain and encourages the tenants to use that rial drain, and drain their own land into it re possible. Who is then to keep the arterial inage in a state of efficiency?—It should be the iness of the people benefited by it.

165. That being so, and what is everybody's busi-s being nobody's business, you would be in favour a regulation that when an estate was sold by the gested Districts Board they should have power to orce the maintenance of the arterial drain?—I uld certainly very much like to see works of that s provided for, so that they would be looked after rwards..

166. The Congested Districts Board in dealing h holdings puts up very good fences and puts the ce in thorough order. If in process of time, owing neglect of business or some other unfortunate habit, annuitant does not keep the place in repair, and by degrees he leaves the place in a worse position than it was when he was put in, and he has to sell the farm, would you in such a case give the Congested Districts Board the power of pre-emption or any power at all to deal with deterioration caused by neglect?—Did the deterioration happen while he was sub-tenant to the Board or when he was owner?

48167. When he was owner?—There is no walk of life that men do not fail in, and when he fails it is to his own loss, and he is forced to go to the wall. He should not, I think, be punished again. He has been punished enough by his own foolishness.

48168. We have it in evidence that no other tenant proprietor should be allowed to purchase the farm; what would you do with that farm?—That depends. Unless the adjoining holdings were very large I think there would be every reason for permitting a neighbouring tenant to buy, and in any case I think that the owner should have a free market.

48169. And all purchasing owners should have a free market?—Yes. There should be a free market.

48170. Therefore you do not agree with the proposition that one purchasing owner should not be allowed to purchase a farm the owner of which had come to grief—you would leave it free to be bought by a peasant proprietor?—That is an aspect of the question that I have not given any attention to, and I cannot give a definite answer to it; but, speaking generally, a tenant-purchaser should have a free market. That is quite a different statement from the one that would imply that there is a free market at present, because the prices that are being offered and paid for land are not free prices. There is no free market. The first cases I gave were cases where there was a free market, where the landlord bought from another; in the first case there were only four years' purchase, and in another the figure was 9½. But between landlord and tenant there is no free market in land.

48171. But between tenant and tenant?—I consider that they should be more or less on the same standing, and there would be certainly a considerably larger margin of free market in their case than there is in the case at present between landlord and tenant.

48172. The Congested Districts Board having bought a considerable estate and spent a considerable amount of money on it, re-settling it, and putting it on a proper basis, do you or do you not think it necessary that there should be somebody in the locality, for some time to come, at all events, to act as instructor or adviser or helper for the tenants?—Yes, I was coming to that later on. I was about to suggest that there should be an agricultural instructor placed in every district.

48173. And where there are obvious cases of waste and neglect by the tenant would you arm the Congested Districts Board with special powers at all to deal with the question—do you think it necessary?—Of course, if there was abuse and the people were not able to manage as it should be managed, but the case should be an extreme one. If a landlord mismanages his property at present surely the land is not going to be taken out of his hands unless the case is an extreme one.

48174. Mr. O'KELLY.—Sub-division of holdings is a great evil?—It is if the holding is not capable of being sub-divided.

48175. Consolidation of holdings is just as great an evil?—Where the holdings are too small it is highly desirable to have consolidation. Where they are too large sub-division is also desirable.

48176. You admit that undue sub-division is a great evil, and that consolidation may be as great an evil. Don't you think it might be well that some authority representing the State, when the holding is given up, should take possession of it and hand it over to someone who would work it economically rather than have it sub-divided or added on to a holding already sufficiently large; I think that that is the system that prevails in Germany?—If the holdings in the neighbourhood are sufficiently large then of course it would be better, from my point of view, that there should be a new tenant placed on it.

48177. If a tenant wished to dispose of a holding, say, of thirty acres, is it not better that some authority representing the State should pay the full market value for it, and let the State afterwards hand it over to a new tenant, and not allow it to be added on to a holding already suffciently large?—Certainly. The State should prevent sub-division where it should not

Aug. 23, 1907.

Rev. J. J. Hegarty.

take place, and should prevent consolidation, too, where the holdings were large enough.

48178. Agreeing, as we do, on that point, don't you think that the State ought to intervene in cases of the kind?—It ought to intervene if there were a crying evil.

48179. Won't you admit that consolidation, generally speaking, is an evil as between the grazing ranches, and that sub-division is also an evil, as we know, from experience, in this part of the country?—Yes.

48180. That being so, don't you think it would be wise that some authority representing the State should intervene when a farm is being sold, either through the improvidence of the owner or some other circumstance and take it up and let it out to some person who would be able to work it?—Certainly; there should be some means of preventing sub-division, and also as a consequence of that to prevent consolidation. I have mentioned that since the live stock schemes passed from under the care of the Congested Districts Board Erris has suffered very considerably. I need not refer again to the horses, but the Congested Districts Board supplied a hardy good class of animal, and supplied a good number of them. The Department supplied one or two very highly fed and bred animals for the whole district. They were too soft and not at all suited to the boglands of Erris. I consider that a hardy half-bred animal that could be got for from one-third to one-tenth the price paid for some of these thoroughbred animals would be more suitable for Erris than the thoroughbred shorthorns which have been sent by the Department. It is better to raise the price of 1,000 calves by five shillings per head than to raise the price of 100 by £1 a head.

48181. Sir Francis Mowatt.—When you say that the Department's scheme was not successful what, precisely, do you mean?—The calves were too tender.

48182. Sir John Colomb.—They were unsuited to the nature of the district?—Yes.

48183. Mr. Kavanagh.—There are seventy-six cross-bred bulls in this county?—Yes, but they are not in Erris, as far as I know.

48184. Sir Francis Mowatt.—I saw one very nice bull passing on the side of the road?—That is the only one in my parish, and that has been only supplied within the last six months, whereas there used to be four or five in the time of the Congested Districts Board, and a farmer told me some time ago that the people suffered £1 a head in the calves since the change. There is a considerable amount of grass lands available for the relief of congestion. Of course all these lands should be cut up and given to the people in the neighbourhood. I think that about 200 new holdings could be made out of all the grazing lands of Erris. That would be on a basis of from £5 to £7 per holding.

48185. You state in the précis of evidence which you have sent in that it requires some inducement to get a considerable number of tenants to migrate outside of Erris and that the grass land in Erris is not enough to produce the necessary increase?—Not enough to give all the people in Erris economic holdings, so that after dividing the grazing lands of Erris among the people here you will still have a number of tenants in Erris on uneconomic holdings. Those it will be difficult to migrate. Some of them may be induced to go but they will have to see what they are getting.

48186. Mr. O'Kelly.—Do you take in the fishermen in your calculations?—No. I think that the fishing population would not move under any circumstances.

48187. But in coming to the conclusion that there is not enough of land do you include the fishermen?—I do not.

48188. How do you exclude them?—I say that even omitting the fishing population there is not enough to go round.

48189. Chairman.—You have had considerable experience of the operations of the Board in your district. Can you tell us whether, in your knowledge, there is any one single case of a man who before the improvement of his holding was obliged to go to England as a migratory labourer, who now, owing to the improvements of his holding has been enabled to earn his living at home?—I know that the tenantry have been considerably improved.

48190. I daresay, but is there one single case that you know of such as I have referred to?—I cannot, except by inference, answer that in the affirmative, but if there has been a general all-round improvement, it is a natural consequence that there must be some who have passed from the state of migratory labourer into that of permanent resident, because there are some who migrate who are on the borderline already, and a good season might leave them at home. They have been improved through the means of the Congested Districts Board. I have not before my mind any particular individual, but I have in my mind several men whom I know to be much better off than they were before the Board improved their condition. I know of men who in days gone by did go to England and Scotland, and who do not go now, but I cannot say that that is due to the action of the Board.

48191. Mr. Kavanagh.—Would these new farms that you would portion out of from £5 to £7 give enough employment to keep the family at home without migratory labour?—They would give plenty of employment, that is, the average class of holding, mixed land.

48192. The grass land that you suggest cutting up into £5 and £7 holdings?—Yes, but it is, as a rule, surrounded by a fringe of moor or bog. In almost every case they give some bog along with it.

48193. That amount of land would not give enough employment to keep them at home?—Where there would be about half of it bog, I think so. Where the holding would be entirely clay I should say that a £10 holding would be required in order to give employment for all.

48194. Sir Francis Mowatt.—Assuming the creation of economic holdings which, I think, yourself and preceding witnesses have told us could be managed by a father and his gradually-growing up sons, have you contemplated what is to happen when those sons grow up and become men; if they don't migrate to England, or take themselves off to some other industry, is it not certain that that holding will either be split up, or will become uneconomic from the number of people who have got to live on it—that is the difficulty that is continually suggesting itself to my mind?—Unfortunately, there is a tendency to sub-divide, especially the poorer class of holdings. Where the holding is above £10 valuation, I should think that there is no desire to split it up at all.

48195. But I want to follow out the difficulty. A man has three grown-up sons, who grow up to manhood. Surely, if the holding is divided among them it would cease to be economic. My difficulty is that *ex hypothesi*, the holding must become uneconomic as the next generation grows up?—I don't agree with that, because if that were a universal principle, every holding in Ireland would become uneconomic. Farmers' sons have in many cases to take to some other business or walk in life. I notice that the tendency in the case of holdings of £10 and upwards is not to sub-divide at all. No matter how numerous the family may be, they have all got to look out for a place to live in, except one or two, and they will have either to buy a holding or go to some business or emigrate.

48196. Then you do not contemplate the entire family permanently living on the soil?—No, I never did.

48197. Chairman.—I suppose that the land is not the only source of livelihood that that might be set about? Take a shopkeeper, he has a business which is large enough to support his wife and family while the family is growing up, but which is obviously not large enough to support his family or grown-up sons and daughters, and their wives and children, and the result is that when the sons grow up they have to go off, and it is not true to say that that business is uneconomic because it is not large enough to support the whole of his family after they have grown up?—Certainly not.

48198. Sir Francis Mowatt.—It has not been suggested that the young shopkeeper, or tradesman, or solicitor should not go off to some other business for which he is suited, but I think that the great object that a great many of the witnesses have put before us has been that the men born on the land should remain on the land, and should not go into other industries except as helping them a little while they do remain on the land?—In every country in the world they will go off the land to other businesses.

48199. Chairman.—It is not your view of economic holdings that they should be of such a size as to support indefinitely an indefinitely large family

hat view any holding would become uneconomic me if an Irish husband and wife were planted

00. In your view a holding which is incapable pporting a wife and a young family is un- mic?—Yes.

01. What you mean by the creation of an mic holding is to increase that holding to such xtent that it will support the owner and his and family until the family grow up?—Yes, rdinary average family; and he will be able to one son to follow up the business, and also ve a little schooling to the others, and send to business, into the police, to America, or here.

02. In a large family the bulk of the sons must out for themselves in exactly the same way as shopkeepers' sons must do?—Certainly.

03. Most Rev. Dr. O'Donnell.—That is an in- ting subject, and applies not merely to the le of Ireland?—It applies to every agricultural try in the world.

04. If economic holdings are established on a scale it is a very interesting question what the are going to do?—Yes.

05. Provided that the grass lands that should illed were tilled, you would not object to the ger sons going away?—If there are lands available agriculture those who are trained to agriculture ld get them, because if a man does not get an ing in the walk of life for which he has been ed he has to take to something for which he is suited. But where there is not available land, n Erris, or even if all the grass land in Ireland cut up, the holdings would become uneconomic generation or two.

06. If the people were sufficiently back on the in Ireland you would contemplate the young sons me of the sons of the family looking to something rent from farming for their livelihood either in country or elsewhere?—Some of them should.

07. Chairman.—So far as the splitting-up is erned, is not it your experience that there is not a great tendency to split up the holdings, even ou might say quietly, of those who have bought, here is in the case of the holdings that have not bought?—I have not sufficient experience of chased holdings yet to say that, because they have been purchased during the last four or five years, I think that the tendency will not be so great to t them up as it has been.

08. Won't the spirit of ownership counteract tendency to sub-divide?—That is what I expect.

09. Is not it also the fact that although the may not be all-powerful, yet it does go some way ards preventing sub-division so long as the an- ty is payable to the State?—Yes.

10. So if that law operates at all, at any rate, need not contemplate the sub-division of holdings ny great extent until after the 68½ years has ex- ed?—And I would think that even then when there nothing to pay a man will look upon himself as owner, and not be inclined to split it up. We e a large fishing population owing to the exten- seaboard and the good fishing beds that surround coast. I should think that there is twice the ing population that is returned to you already by Green. There are about 300 currachs that he not given in his return at all. They are not re- ered with the coastguards, and I suppose that t is the reason they are not returned. There are about 100 yawls in Erris. There are about seven eight fishing stations, curing stations, where the gested Districts Board used to buy and cure fish, where the fish merchants now come to buy fish good seasons. Unfortunately the pier and har- r accommodation is very poor. The piers are y small, and in the rough weather there is no lter whatever. It would be desirable then to e a few piers built, and to have some larger boats plied, some boats in which the fishermen could low the fish. All the fish around the coast are not se to the shore, and the fishermen should have ger boats to go far out to sea. I think also, in ler to improve the fishing industry, that it is abso- ely necessary to have railway accommodation.

11. Sir Francis Mowatt.—Do I understand at there are none of these large boats of the Zulu pe in Erris?—No, there are not.

12. What are the largest boats you have?—The only boats that I know of that are used by the fishermen are the yawls.

13. What is their tonnage?—About two tons.

14. Chairman.—Have any attempts been made along the Northern coast by the Board to develop fishing?—The Board have brought it to the present relatively developed position which it now occupies. I knew the time in my parish when the fishing was not one-third as good even as it is at present.

15. What have the Board done?—The Board supply loans for getting boats and gear, and in a few cases they have made piers and slips.

16. Most Rev. Dr. O'Donnell.—Is Porturlin in your parish?—Yes, and Portacloy and Inver.

17. The previous witness was not aware of the expenditure on these places?—The Board built a pier at Porturlin and a small pier at Portacloy and one at Inver. But these piers are not large enough even for the yawls in anything like rough weather, and consequently the boats cannot approach these piers in rough weather.

18. Chairman.—The northern harbours, with the exception of Broadhaven, are rather exposed to Northern winds?—Yes.

19. In order to make them good enough for big boats, a large sum of money would have to be expended on them?—I think that Porturlin or Portacloy could not be made large enough for big boats except at large expenditure, but Broadhaven, I think, would be quite near enough for large boats for the fishing population both of my parish, and of the other parish on the Mullet, because the fishing population is confined practically to these two parishes in Erris.

20. Which do you think the better policy—to have small piers all around the coast, or to concentrate expenditure on large works at places like Broadhaven, and make that the great centre on the northern coast?—The Broadhaven scheme would be the one that would enable large boats to be used on the coast.

21. Is not it better to have a certain number of the population encouraged to become what I may call real fishermen by the use of modern appliances of fishing, and the facilities that are possible in a great natural harbour like Broadhaven than to create along the coast a number of people who are half fishermen and half farmers?—It would be better to create a fishing population in places like Broadhaven, who would live by fishing alone. If this were done, then you could establish an industry.

22. Of course that would require a railway?—Yes.

23. Do you think it would be an advantage supposing that Mayo was to have a fishing instructor stationed about here looking after this district alone—do you think that by personal and constant touch with the people along the coast, a man of that kind would be able to encourage people to fish scientifically and constantly?—The Congested Districts Board used to supply experienced fishermen from other parts of Ireland and from Scotland. They were sent here about ten years ago to teach the people in my parish long line fishing.

24. Have you ever had a resident fishing instructor?—Yes. There were half a dozen of them at one time. They were fishermen who came from other parts of Ireland or from Scotland. They went on the boats with the local crews, and resided in the district during the fishing year.

25. Why were they withdrawn?—The long line fishing failed. I think that the fish left the coast for a time.

26. Is there any reason to suppose that the fish are off this coast in such quantities that the fishing may be greatly developed?—Fishermen tell me that all the year round there is fish of some kind to be got.

27. Are there great numbers of herrings?—They don't fish herrings. They have no market except for local consumption. The market is for mackerel. They used to fish cod and ling, but the long line fishing has been practically abandoned in my district. I think the fish are not quite so numerous as they were, and with the boats which the men have to use for these operations they may go out sometimes, and when a sea gets up they are not able to land at the piers, whereas in their canvas canoes they can run on to the strand.

28. Do you believe that Broadhaven could be turned into a second Downings?—I believe that there

Aug. 23, 1907.

Rev. J. J. Hegarty.

is as good fishing there as in any other place. The herrings may be increased, but the supply of mackerel is very good. The fishermen who fish salmon around the coast reported again and again that the sea was thick with mackerel.

48229. Most Rev. Dr. O'Donnell.—If you had steam drifters to go around from a safe harbour at Broadhaven they could find these herrings and mackerel?—That is the view that the fishermen recently put before me. They cannot follow the fish. They can only just fish them when they come in close to shore. They gave as an example the case of a Scotch boat coming along there and making a fortune in two seasons.

48230. Is there some reason for supposing that the mackerel and herrings have come to replace the larger fish that used to be caught off that coast?—I really could not say that.

48231. Do you consider that the mackerel are found there every season?—The mackerel were found there when the cod and ling were found also.

48232. Sir John Colomb.—Are there any lobsters and crabs?—Yes.

48233. Is that a very considerable industry?—It is considerable, but not all on the Erris coast.

48234. How do they get the market for the lobsters?—That is really the great difficulty. Frequently lobsters go bad for the want of transit facilities.

48235. Have the cod and ling stations disappeared?—No. The stations are still in good workable condition.

48236. Sir Francis Mowatt.—Long line fishing, I suppose, is cod and ling?—Yes.

48237. Chairman.—I suppose that you would be disposed to think that a railway running along the north line of coast would be better than one coming up from Mullaranny?—Yes, even without the fishing industry the north coast line would be better, but in addition it is the only route to accommodate the fishing.

48238. And would not it be more advantageous to link this part of the world up with Sligo and that district?—Certainly If we are successful in getting the All Red route to come into existence it will uplift Erris very considerably, if nothing else. Supplying provisions for these big boats would give the agricultural population of Erris quite enough to do.

48239. Whether the All Red route goes through or not is a question for the Canadian Government. It has nothing to do with the English Government?—They are expected to give a subsidy. I have seen it stated that the Canadian Government are willing to give a subsidy of £250,000 a year. In connection with the fishing I should like to refer to the evidence given by The O'Conor Don before this Commission. In reference to fishing he described the Geesala population as a sea-supported population. That is the one district in Erris in which, although the population is a seaboard population, they do not fish. They are not a sea-fishing population at all, and the only time that they are supported by the sea is when they are going to the English and Scotch harvests, then they are supported in the vessels. He also referred to Erris as being not at all a congested district. Already I have pointed out that it is one of the most congested in Ireland.

48240. Sir John Colomb.—Has The O'Conor Don got property there?—I don't know whether it is sold. He had a small patch in the Mullet. The crochet industry, as established by the Congested Districts Board has taken root in Erris and been very successful so far. In the agricultural schemes in connection with the county schemes and the Department we have been neglected entirely by the Department both from the agricultural and the industrial point of view. The scheme, no doubt, was supposed to be drawn up by the County Committee, but the voting on the Committee is entirely outside; there is practically no interest in Erris. The active members of the Committee are not people who represent Erris. In Mayo there is an Agricultural Committee of sixty-four. I think that last year they met about twelve times. If we put down £1 a day both for expense and loss of time it is a very heavy expenditure for the purpose of saying yes to a scheme that is practically drawn up in the Department. If the five representatives from Erris were to attend it would cost them a good deal. It would cost me £2 10s. travelling and hotel expenses to go to each meeting in Castlebar. In addition one would lose three days, so that the cost to Erris of the Erris representatives attending would much more than any grant that they could rec Their share of the grant between rates and subs would be only about £100, and they would expe least £150 if they attended every meeting. members of a Committee spending £150 to supe the expenditure of £100 is not a good arrangeme

48241. Mr. Kavanagh.—That is the fault of bad transit facilities and not of the County mittee?—Yes, and also the fault of the system ministered by the Department. Meetings are too quent; the business is hardly ever done at the meeting; everything has to come under the *ipse di* of some man from Dublin. The result is an imm waste of time and money. I refer to this to p out that Erris cannot have a voice in the admini tion of its own agricultural affairs if the pre system is to continue; and instead of the pre system of the agricultural scheme being drawn up Castlebar or by the Department it should be dra up in the congested district itself by the people know the congested district.

48242. Mr. O'Kelly.—Have you a Sub-Committ —Yes, but it is only wasting its time, though not the same expenditure that would be entailed by go to Castlebar. It has no voice in the distribution the money, or the drawing up of the scheme. It met several times, and it has had no effect. It co not even get as much as the information that it as for. I asked, by letter, the Secretary what was expenditure of the Department in Erris since they t up the agricultural work in it.

48243. Did you apply to Mr. Carolan for these ticulars and did he point blank refuse to supply th —Yes.

48244. What was his answer?—I told him tha wanted it for the purpose of giving evidence be this Commission, and he used that as an argun against giving it.

48245. I think that that would be a grave der tion of duty on his part?—Yes, and the Sub-C mittee here passed resolutions time after time as him to supply it.

48246. You have not got a copy of Mr. Carol letter?—I have not got it here.

48247. Did he really write saying that the fact that you wanted to bring these matters b this Commission was sufficient excuse for withhol the information?—That was the reason he gave.

48248. Then I think that that was highly impr and that there should be a question in Parlia about it?—The scheme drawn up by the commi does not at all suit us. There are £290 expende shows this year, £205 on horticulture, £300 on bu making, and whatever little aid we may receive i the butter-making section there is none from subsidies to the shows or the horticulture. Erri not a district for fruit-growing. The horticult visited Erris and reported to the committee there was not sufficient shelter and that they sh plant belts of trees in Erris, and they made a g of £10 for ten shelter belts of trees in Erris. T has been a suggestion that they should make a g of £100 in order to provide shelter for each of t shelter belts. I bring these items before you in c to point out that the county committee will n work here successfully, and that the local advi committee of a few shopkeepers and others in mullet will have no effect.

48249. Mr. Kavanagh.—Did you do better u the Congested Districts Board in the matter of culture?—Certainly. The suggestion that I wis place before the Commission is this, that the pa committees should be relied on now for the uplif of agriculture just as they are relied on for improvements of houses under the Congested Dist Board. There should be a grant of £100, say, to parish, and the committee should decide on givi subsidy of £5 to each of twenty landholders in parish, under the special supervision of a local cultural expert. We have, at present, an agricult instructor stationed in Belmullet. His busines nothing very definite; to wander round the cou looking for what may turn up. If any person sults him he goes to him and he can speak about crops, but he has nothing very definite to do. U the new system all the holdings would be pointed together, and there would be a report as to how holding was to be improved and what it would and there would be a subsidy of, say, £5 to the ten

in the shape of seed, partly in the shape of re, and something for the special labour that gricultural instructor would advise. That would, ik, be sufficient inducement to these twenty ten- to follow the instruction and be guided by mediate supervision of their own parish com- . It would bring the expert knowledge into with the committee and with at least twenty men, and in five years I would expect that these ly holdings would be example holdings for the ty. That is how the distribution of the grants d be carried out. Then the parish committees combine and form one representative body for whole rural district. In other words, there d be an agricultural committee drawing up the scheme in Erris instead of in Castlebar, a com- e representative of the people of Erris through arish committees. If each parish committee will int, we will say, two men, with the four parishes rris there would be eight, and the County Coun- s also under the rules of the parish committee d be eligible as well. These should form the ultural committee for the district.

250. CHAIRMAN.—Would the scheme be in any grafted on to the county scheme or be entirely ate?—I think it has been proposed to you that uld be necessary to have a special scheme in the ested districts if anything is going to be done. ay be worked either in connection with the county hittee or directly by the Department. I think it d not suffer if it went directly to the Department. amount of grants coming to Erris and to all the ested districts could easily be adjusted without ing.

251. Under the county scheme the County Coun- rated in aid of the grant?—Yes, to the extent penny in the pound.

252. If you separated yourselves entirely from ounty organisation you would no longer have the ntage of the rate?—The rate could be levied as it is d at present, and apportioned as it is supposed to ne now, subsidised or assisted by the grant from special aid fund for the congested districts.

253. Your proposal amounts to this, that the ty Council should assess the rates as they do ; that that portion of the rates which is levied for ongested districts should be taken from the juris- on of the county committee and handed over the local committee?—Yes, and administered ugh that body.

254. Sir JOHN COLOMB.—What will a penny in pound realise in Erris?—£45.

255. With regard to the improvement of houses these matters, the grants given by the parish mittee are given on condition that the men fited should contribute the greater portion of the ?—Yes.

256. Would you apply the same principle in the cultural work?—I would make it conditional on an's working the holding under the direction of agricultural expert and carrying out the improve- ts asked. He would have to raise a crop of his , and no doubt he would have to expend a certain unt of money, and if he was not a reasonable the committee would pass him by for one who ld be guided by the agricultural expert.

257. Who do you say would make the selection of twenty farmers?—The selection, in the first in- ce, would be made by the Parish Committee; the mate selection would depend on the report of the icultural expert. If he reported that a farm was suitable, or that the farmer was not inclined to the work, then that holding should not be selected.

258. CHAIRMAN.—Where you have a county with ongested area and a great part of the county is -congested it might not interfere with administra- n, but if there were a great increase in the area eduled then it seems to me that the effect of your posal would be that the body elected by your ish Committees would be the chief administering y, and that the County Committee would become a her small thing?—In this county the congested tion seems to be the larger, but the voting power entirely in the hands of the non-congested popula- n.

259. Most Rev. Dr. O'DONNELL.—You would re- n the Parish Committees as they exist now, under Congested Districts Board?—Yes.

260. So far as I can see from your precis, the pur- e for which you would suggest this new body would be to conduct agricultural instruction in Erris?—Yes; that they would be an administrative body.

48261. Is it for agricultural instruction?—Jointly. The new work would be jointly with the present Committee work.

48262. You consider that the agricultural instruction as given now by itinerant instructors is not availed of?—It is a waste of money entirely.

48263. Then you want to get the agricultural instruction put under a body that knows the local wants?—Yes. I want to get the agricultural expert to give the instruction practically to the most intelligent men in the parish, and that the Committee will back up the instructor, and get the teaching carried out by the farmers.

48264. It is for agricultural instruction in comparatively remote places like Erris that you wish this special Committee established?—Yes. I am speaking for the congested district of Erris.

48265. You think that Erris requires exceptional treatment even among congested districts?—I am not sufficiently acquainted with other districts, but I know that Erris is exceptionally placed, and requires exceptional treatment.

48266. This Committee would be composed of two members, selected by each Parish Committee?—Yes.

48267. They would work through the agricultural instructor and through the Parish Committees?—Yes. These men would go to the central body in Erris; they would come home to their parish, and report what was done, and what class of work was the better; and in carrying it out they would be in touch with agricultural instruction through the agricultural expert.

48268. That is the composition of the body administering your scheme. Let us see how the funds would be provided. Would the Parish Committee directly provide any of the funds?—No. The funds would come *via* the rate, just as at present; and if it is succeeding, that is only a small portion of what is needed. I think Professor Campbell has already suggested that about £30,000 would be required for the special treatment of the congested districts?—I have not sufficient knowledge.

48269. You would require a large amount for each parish?—You would require for each parish £100, along with whatever grant the Board give for agricultural work under their present schemes.

48270. £100 for a parish would be required from some source in addition to the grants from the Parish Committee?—Yes.

48271. Twenty small holders would be selected in each parish?—Yes. Three of the parishes have about the same population, and there is about half the agricultural population in Belmullet; but the difference in extent and population could be adjusted by the local Committee.

48272. Would the twenty farmers selected for the year 1907-08 be the same farmers as those selected the following year?—I should like to have the scheme worked with the same men until it was put into proper working order. If the proper men are selected the first year they ought to be continued for four or five years. Instead of one example holding you would have twenty example holdings; and at the end of four or five years each of these would be an example for the whole district.

48273. Each of your twenty men would be practically an instructor in the district?—Yes. His holding would be an example and a model.

48274. And he himself then might be looked upon as a local instructor?—Yes; but not a paid instructor.

48275. Sir JOHN COLOMB.—How many parishes are there in Erris?—Five in the barony, four in the rural district of Belmullet.

48276. Have they all got Parish Committees?—Yes; and two of them have two Committees each—the parish of Kilmore and the parish of Bangor. My parish, although it has the same population, has only one. Belmullet has only one.

48277. As a broad principle of policy, I understand you to say you rather rely on associated individuals in the shape of Parish Committees to deal with the improvements of agriculture, and giving a proper system than on a system of organisation maintained by paid officials?—We would have to have one paid official, but there is a paid official, a supervisor, attached to each Parish Committee at present, and

Nov. 23, 1907.

Rev. J. J. Hegarty.

there is also a paid secretary, but the money is merely nominal.

48278. But the broad principle of your policy is to rely on associated local effort for the improvement of the district?—Yes, to get into touch with and work through the people. There is a number of experts sent round the country, but they are only wasting their time.

48279. CHAIRMAN.—Speaking from your experience of the extremely poor properties that exist in this district, are you of opinion that the direct sale of such property from landlord to tenant should be permitted?—It should be forbidden entirely within the congested districts.

48280. Is it your opinion that such properties should invariably pass through the hands of some improving body before being vested in the tenants?—Yes. It should be kept from three to five years in the hands of the improving body.

48281. Mr. O'KELLY.—You say that the members of the County Committee come from the non-congested districts?—Yes.

48282. Have you looked into the list?—Yes. As far as the five members here are concerned they don't attend at all.

48283. You say that one committee for the whole county is objectionable?—Yes. The active voting power at present is placed outside the congested districts.

48284. I might suggest to you that the members of the Agricultural Committee of the county come from the congested area?—The congested area in the county, I suppose, is very extensive, but most of the men I know are from the uncongested portion.

48285. Tell me one?—Mr. Corcoran, in Killala.

48286. You may distinguish between areas that are congested and areas that are scheduled as congested. Don't you think that there is as much congestion in Killala as there is in Claremorris or Swinford—in fact I venture to say more?—Looking at it from the rating there may be, but there are only two scheduled districts in Killala.

48287. I would remind you that they are not all members of the committee, because the County Council has allowed the local district councillors themselves to nominate the members, so it is not the fault of the County Council, if what you say is so; because of the great expense involved in coming up to Castlebar, the County Council have appointed a sub-committee. What are the functions of that committee?—I attended the first meeting of the committee with a view to preventing its establishment, because I was of opinion hat the committee was being set up for the purpose of conveying to this Commission that we in the congested districts were satisfied with the existing state of things, and that getting this committee to advise would bring us into touch. This committee has been sitting since, and, as far as I can gather, they have not got anything done, and no advice has been taken from them.

48288. What is its income?—It has no income at all. The opinion in Erris, and my decided opinion is that we have not got back the rate raised in Erris and the 1½*d.* in addition.

48289. You think that the County Committee have not treated Erris fairly?—Certainly.

Mr. DENIS G. B. BINGHAM examined.

Mr. Denis G. B. Bingham.

48290. CHAIRMAN.—You are a landowner in the barony of Erris?—Yes.

48291. You are nominated by the Landowners' Convention?—Yes. I own some 13,606 acres of land in the barony of Erris, and the great part of it is tenanted. I have some grass lands in my own hands which I use for grazing, and this method of farming I have found profitable.

48292. You say in your precis that you are willing to sell your tenanted land. Are you willing to sell all your land, tenanted or untennated?—Yes. I am prepared to sell it at what would bring me in the same income as I receive at present. I think it reasonable to suggest a sum which, invested in decent trust securities, will yield the present income less, of course, estate outgoings. As regards grazing lands in my own hands, and in the hands of other owners I very much question the policy of taking up these grass lands and parcelling them out in small divisions. The grazing of land is one of the chief, if not the chief, industry in Erris. Even the smaller tenants of agricultural holdings dedicate most of their lands to pasture, as it pays them better than tillage. There is a very large area of mountain and moor land in Erris, which nature has destined for pasture, and it would surprise a stranger to see the number and quality of store beasts that are raised and grown on this class of land. Most of the tenants have, in addition to the mountain run, some better stripes of land within the ambit of their holdings proper, and the cattle improve greatly when changed to these better class divisions. These tenants sell their stores year by year to the larger graziers, and as few buyers attend from a distance owing to the remoteness of our fairs, it is of the first importance to the small farmers to have resident buyers in sufficient numbers to create competition. As a matter of fact it is practically confined to Belmullet, the dealers who buy here. Then there are other buyers who buy the cattle outside again from them, and the cattle are sold then to another lot before they are fit for the knife. That is the usual custom of the country.

48293. The cattle of the small people are sold to purchasers in the locality?—I generally buy small cattle myself. I sell them when they are about two years old, either to larger men than myself here who keep them until they are three year olds, or to men who will keep them until they are actually fit for stalling, and they are then re-sold by the staller when they are fat.

48294. When you sell them for stalling do you sell them to the man who comes here, or have you to send your beasts away?—I generally have to send them to Ballina unless I get another man who is going out to buy them.

48295. Sir FRANCIS MOWATT.—Do you buy them as yearlings?—Yes.

48296. And you keep your beasts until they are two year olds?—Yes.

48297. CHAIRMAN.—Suppose a small farmer is not pressed for immediate cash, and therefore not obliged to sell his beast because he needs the ready money, what is to prevent him from keeping his beast until it is two years old?—A lot of them do keep stock until they are two year olds. A lot of them have grazing with me. One of my farms is kept specially for grazing.

48298. So far as those people are concerned there is absolutely no difference between you and the small people?—No.

48299. Sir JOHN COLOMB.—Is there not this difference, that cattle do better on a large range than on a small one?—Yes, but they come to me, because I have a large range.

48300. CHAIRMAN.—If they had a large range there would be absolutely no reason to prevent them from doing what you do?—That is quite right to a certain extent. A lot of them might not treat their land the same way as I do.

48301. Suppose that their husbandry is good enough, and suppose that they have a large enough holding, there is no reason why small men should not be able to do exactly the same with their cattle as the big men?—I am afraid that the small man would be tempted more to overstock his land.

48302. That would be bad husbandry?—Certainly. I believe that many small tenants who raise a few beasts annually would be prejudiced as to price and demand if the larger graziers were wiped out. There are some lands could be sold. I am willing to sell some myself, and others are willing to do the same, but I think it would be a great mistake to sell all the large farms.

48303. Sir JOHN COLOMB.—A great mistake in the interests of the small men, of whom there are so many in this district?—Certainly.

48304. CHAIRMAN.—Tell me why?—If you create a lot of small holdings you will tend to increase the young cattle. Every holding must have a certain number of milkers, and they must get calves from

e. In the new state of affairs the small men, in- d of selling the calves to the large men, as at pre- , would have to keep them on themselves, and will get their own lands overstocked if they are large farms on which to put these young cattle, it will stop a great industry that they have here. ink it would cause considerable loss to the small . He would lose a lot of ready money that he at present.

3305. Most Rev. Dr. O'Donnell.—Would it not le him to keep his young stock longer?—If his ing were larger, instead of selling at the age of ar he might keep some of the stock over until it wo?—He might, but he would have other calves ing on. As a rule, all the small tenantry sell or two calves in the year. With a larger area and he most likely would have more calves, and might be in a little better condition in that way, when he wished to sell his stock, to whom would ell it.

3306. Mr. Kavanagh.—That would be if you up all the grass lands, but no one suggests that the grass lands should disappear at one time?—I not mean at one time, but I think that a certain ber of the large farms should be kept certainly that purpose.

3307. Sir John Colomb.—Do you think that the ing lands are the economic result of the small lings system—that they supply a want necessary the small holder?—I do.

3308. And in a district like this if you took away the small holder the opportunity for marketing ded by the fact that there is land for grazing would greatly injure the small holder?—I think would.

3309. Chairman.—You say that you sell at two s old, and that the cattle then go to somebody who put more condition on them, and that lly they are finished in a stall before they are d. Have you ever considered whether you d by stall-feeding keep an animal until it is prac- lly fit for killing?—I do not consider that it ld pay me. First of all, you have got to depend the kind of land you have, and you have got to ider the question of transit in stall-feeding.

3310. Do you mean the transit of feeding stuffs? r anything else. If you want to sell a stall-fed e is not a market in Belmullet sufficient for stall- if people went in for them extensively.

3311. Could not you ship fat beasts by this mer to Sligo?—Whom will that bring me into h with?

3312. Would there not be a market for fat beasts Sligo?—I suppose there would, but that is very om done from here. No one ever does that unless is shipping to Liverpool, and some of the local ers who buy here would ship direct to their own nts in Liverpool or Manchester.

3313. Does the ship come here from Liverpool?—

3314. How do the local buyers ship them to Liver- ?—They walk them to Ballina and rail them to lin, and then ship them to Liverpool.

3315. They are not fat cattle?—No. That is what have to do with stores.

3316. Suppose you had a railway?—It might pay then.

3317. It would be a possible thing?—Quite.

3318. What does it entail, does it entail more dings?—It would.

3319. It entails the raising of more green stuff roots?—It would.

3320. Sir John Colomb.—There would be more our?—Yes, but there would be no trouble in getting labour here.

3321. You would have to pay for it?—Yes

3322. Chairman.—As a matter of fact, would not labour which you obtain here, necessary for the feeding of cattle, be much cheaper than it would in Scotland or in the east of Ireland where the ts are now finished?—Yes, but the better class ands in the east of Ireland are more suitable for ening.

3323. But now I am speaking of a system which ld not finish on grass, but would finish by stall ling?—The stall feeding stage, as I understand, es after the storing process.

3324. That is the system now, but is not that a system which is peculiar to Ireland? Is not it perfectly possible if you have the buildings and the necessary amount of green stuff to fatten the beasts long before you fatten them now under the present system in Ireland?—I believe it is. I am not quite sure of that, as I never tried it myself.

48325. Is it not necessary, in order to get a beast fat and finished for market, to have it passed on as it is passed on now from the small holder to the next man, and from him to the Roscommon man or the Meath man, and all the rest of it; all that is a great waste of time?—I think it is. If we had other facilities I think that that would be simplified greatly for us. We would get a more open market, and we ought to get a better price for our cattle.

48326. If you had a railway and could send away your fat beasts, is there any reason why you should not fatten them much earlier than they are fattened now and fatten them here in the place ready for consumption?—I think we could.

48327. Sir John Colomb.—Have you taken into consideration that when you came to market your cattle you would compete against Meath and other places, which would handicap you in putting them on the market, and that you would have to pay more for carriage?—We would have that disadvantage certainly.

48328. Also, have you taken into consideration the deterioration of fat cattle by removing them long distances by rail, so that you could not produce them in the form in which the butcher would buy them owing to the deteriorating effect of the knocking about which they would get on the railway?—That is quite right, but we are at a worse disadvantage at present, because we have to walk them all the way to Ballina to get them railed anywhere.

48329. Chairman.—Against the cost of artificially fattening cattle in that way as against the normal method of fattening by grass you have to set the fact that under the artificial system you would keep them a year less and that you would then produce them fat at two?—I am not quite sure about that. I know at the present time I keep a beast generally about fifteen months.

48330. Sir John Colomb.—You buy them as calves? —I buy them as yearlings.

48331. Chairman.—The reason I ask this question is this. When you say that breaking up the grass lands would have a serious effect on the small holders I think that that assumes that the cattle trade is to be carried on always exactly in the same way as it is now carried on?—I do not say that.

48332. If you were to change the system to a system which is practised in other places I would then ask you whether you think that the breaking up of the grass lands would have such a prejudicial effect?—What I mean by referring to the grass lands is this. If you are going to break them all up—as some people seem to think it is necessary to buy up all these lands and stripe them into equal portions—it would be a great pity that in that case you would have so many small owners that there will be no outlet for these small occupiers. They won't have anybody to buy their small calves from them and they won't be able to keep them. Naturally if you have a lot more tenants on a place, more proprietors, they will want a bigger outlet for their cattle. They will have more cattle. Where are you to put all the surplus cattle there?

48333. Would not the Meath and Queen's County men come and buy them?—I do not think they buy the very young stock. I think they buy more of the two and the two and a half year olds.

48334. If you divided up the grass lands here and gave the better holdings to relieve the tenants from the necessity of having to sell their very young stock to get a small amount of ready cash, would not they be able to keep the cattle until they were ready for the Meath or Queen's County man to buy?—I think that any of them who can do that now. I know a great many do keep them to that age and they sell them then about September or October. That is the usual time that they sell the cattle. That is for the winter feeding.

48335. Have you noticed whether the men with the large holdings keep them at that age?—No; they begin to buy them at that age for the winter.

48336. Are the more prosperous men in the place the men who now keep the cattle until they are two years old?—Yes.

Aug. 23, 1907.

Mr. Denis G. B. Bingham.

48337. It is the small men who sell them very young?—Yes.

48338. Is not that because the small man has such a small holding that he cannot keep his beast until it is two; if he had a larger holding he could?—I presume he could.

48339. If he could keep them until two years old then the Meath man could come and buy them and there would be no dislocation?—That is quite right, to a certain extent. I don't go by that altogether.

48340. Sir JOHN COLOMB.—Does not the answer to that question depend entirely on what the nature of the enlargement is and what the size of the holding is?—Of course it is.

48341. And you must have a holding of such a size as will enable a man with his stock to keep it until it is two years old, so that it shall not be pushed out by the calves that are coming on?—That is what I was trying to convey to his lordship. What I mean is—you will have a great many more small holdings, and naturally every holding that you create means that that individual will be raising a smaller class of cattle. They will have milkers, and from the milkers they must have these calves. Where are they going to put the calves?

48342. Sir FRANCIS MOWATT.—You increase the holdings and increase the output of calves; the one supplies the answer to the other?—Yes; but the lands will be tilled in proportion to a greater extent, and they will still have a very small proportion for grazing cattle. Every man who starts a small house must have a tillage addition to it. They would have to have a certain amount of land under tillage. Every man will have a certain amount of land under tillage. Every man will have a certain number of milkers, and they will have the calves. How are they going to manage if you take up all the big grass farms? How, in such a case, will these men get an outlet for their cattle?

48343. Sir JOHN COLOMB.—At present, in the district, there are certain grass lands and certain small holders—never mind the proportion—and the small holders are producers of cattle?—That is quite right.

48344. And the grass lands mature the cattle to a certain stage?—Yes.

48345. Is your point this, that if you take those grass lands and divide them up into small holdings you increase the number of producers of cattle, and you diminish in this district the power of maturing those cattle?—That is what I think.

48346. Therefore, when you ask how are the people to get rid of those cattle what you mean is that under those conditions the number of cattle would be greater, and people would have to get rid of them at just the same young age as at present, and therefore there would be an increase in the number and no increase in the buyers, because the means of keeping them would be cut away?—Yes.

48347. The people who would be hit would be the small holders of Erris?—Yes.

48348. Mr. O'KELLY.—You will admit that Mr. Doran is an authority on this question?—Yes.

48349. Have you read Mr. Doran's evidence?—Yes.

48350. Did you see that he said that the land now in the hands of graziers would carry more cattle if it were in the hands of small farmers?—I do not think so myself.

48351. Would you agree with that statement which he made?—Hardly, because with more tenants there would be more agriculture on the land, and there would be less room for the beasts.

48352. CHAIRMAN.—Let me put to you a hypothetical case. Take a man with ten acres of land. He tills part of it and part of it is under grass. That man has, we will say, three calves which he has to sell every year because of his holding being so small, and because he has to make room for the calves coming on?—That is quite right.

48353. On the side of the road opposite that man is a man with a large tract of grass. The first man has either to sell his three calves to the second, who will put them on his large tract, or he has to hire part of that man's grazing in order to put his three calves on it?—That is right.

48354. We will say, purely and roughly in a hypothetical way, that these three calves take up five acres of that grass ranch. Suppose by a distribution of the grass lands those five acres of grass belonging to the big man were added to the holding of the small man, making his holding fifteen acres instead of ten, what reason is there in the future to prevent him putting the three calves as before on to this five acres, which in that case will belong to him instead of the other man?—There is nothing to prevent him from doing that.

48355. How, then, if you break up that ranch and parcel out and add to holdings the land which the cattle at present occupy, will you destroy the possibility of this man's finding feeding for his calves?—First of all you will reduce the competition and the number of people who will buy, and he will have to look out for other buyers, and very likely take a much smaller price.

48356. But that man will not sell his calves. He will keep them. He sells them now only because he has not got room for them. If he had the five acres added on he would keep the calves for another year and sell them as two year olds?—From my own experience, and being in the habit of buying and selling, I think that they would lose. They would have less competition. Eventually it would narrow down to one man, and then that man could do what he likes in the way of buying and selling.

48357. Mr. KAVANAGH.—How do they do in counties of moderate-sized holdings—take the County Wexford? It consists nearly all of moderate-sized holdings without any big graziers, and the people are not overproducing?—You have got railways running through Wexford and other means of getting about.

48358. Still they keep the stock until they go, probably, to Meath. Your contention is that the small holders will over-produce if they get an increase of their holdings—is not that it?—Yes.

48359. In other counties where the holdings are of moderate size that does not happen?—I have noticed in individual cases here——

48360. Sir JOHN COLOMB.—Cattle in the process of maturing in order to give them the best advantages must have a range?—They are decidedly the better.

48361. The man who confines a beast to five acres will not finish it as well as if he had a larger range?—I don't think he will.

48362. Fifty beasts on 100 acres will do better than ten sets of five beasts each on ten acres, because they get the range?—I should say they would.

48363. CHAIRMAN.—Sir John suggested that fat cattle lost condition very rapidly if you send them by rail or road. In a district like this you have boat transit facilities?—That is so.

48364. If that is so why should not you kill them here and send the meat away?—I sent some lamb over to London to a friend of mine. Thunderstorms came on, and it went bad on the way. If you are going to kill a lot of meat here at certain seasons of the year it might be done, but I do not know how you would propose that it should be done.

48365. You could insure your meat?—I do not think it would pay under present circumstances. In case the policy of acquiring grass lands is, for State purposes, persevered with, I suggest the owner's twofold interest in the lands should be recognised. Where the tenant has acquired a vested interest he can sell this interest at a high figure, and I have known tenant-right in Erris to fetch as much as twenty-two years' purchase. Where lands are in the owner's possession he has the twofold interest, and should be compensated accordingly. I endorse Mr. Doran's method of estimating the fair price for lands in hand, and Mr. Finucane's statement to the contrary is not based on reason or justice.

48366. Mr. O'KELLY.—What method is that?—Mr. Doran's method of estimating the fair price. It is very hard to expect the landlord to fix the price.

48367. What is the particular cause of complaint that you have in connection with Mr. Finucane's statement?—I do not think that he estimates the fair price of land in the same fair way that Mr. Doran does.

48368. Upon what do you base that statement—on the evidence that he gave before this Commission?—Certainly.

Mr. O'KELLY.—Can you refer me to the section?

48370. Sir JOHN COLOMB.—Mr. Finucane's Memorandum as to the price of untenanted land is at page 325*?—I have not got my copy with me, or I could show you the place. There are some congested areas in Erris, and I think the Government of the day should try to establish some industries to supplement the benefits derived from the land. It is

* See Appendix to the Third Report of the Commission [Cd 3414, 1907.]

nfortunate that in the West of Ireland nearly every ass is dependent upon the land, and all ameliorative forts appear to intensify the situation by conscli- ting attention upon nothing else but land. If some dustries suitable to the people of the district were anced the people would be able to live in decency d comfort; work would be provided for the young ople, and agitation would diminish with the con- quent contentment. In our barony the industries hich might be developed are turbary and kelp. We ve thousands of acres of splendid turbary, and when e hears that fuel is getting scarce in the outer world is more than strange that some Government has not ken up the matter. Roads should be made into the gs; a good drainage system should be carried out; d facilities for marketing the turbary should be forded. We have large areas of deep, black turf, hich is only second to the best coal, and there it lies touched for miles around. The great industry of lp-raising has received a sad check in recent years, d the cause of this should be traced to its proper urce. It is said buyers formed a ring, so as to cut ices, and the result has been disastrous to the people ving on the maritime coast. I believe the kelp serves eful purposes still, and resolves itself into many ements of utility, but the price is not now sufficiently ttractive to encourage the "maker." I think that e most important thing that the Congested Districts oard could do here would be to make drains, and make them themselves. I think that this should e done, because, from what I know of the people and rtain little differences that exist between adjoining roprietors, the man below might not agree as to the ork to be done by the man above.

48371. CHAIRMAN.—You suggest that turbary should e marketed and the kelp industry developed. Have ou ever considered whether sending peat so far as ou would have to send it would not take up all the rofit, if there is any?—Germany is able to export eat moss litter into Dublin. That is one industry iat could be very well developed.

48372. There is a very small demand for peat moss Ireland?—When you speak of selling turbary it is easible when you have got a market near, but where ookers can take turf over, if you are going to start steamer or send it by rail, surely the cost of freight ould consume the profit.

48373. Mr. O'KELLY.—What kind of agitation do ou refer to when you say agitation would diminish?—There is a great deal of agitation here about the and and about the rents. The landlords are perfectly illing to sell on terms that will give them their resent income, less the ordinary outgoings of an state. It is only the agrarian agitation that I refer o.

48374. Your view is that if the landlords and ten- nts came to terms the result would be to end the gitation. You have got some tenants?—I have a arge number.

48375. Some of them live quite close to the sea- hore?—Quite.

48376. I understand that they gather kelp?—Some f them do.

48377. I understand that the reason they are so uch addicted to the vicious habit of agitation is that hey are charged one-third the profit on the kelp by he landlord?—It is only where the land is in my own ands, and not where the tenants are living them- elves on the land.

48378. Most Rev. Dr. O'DONNELL.—I think Mr. oran stated that when the land was broken up and ut under a good mixed system, it would not only roduce more cattle but carry more cattle. He had his before his mind, that he contemplated a great mprovement in the system of cultivation, the intro- luction of something like the Belgian system, and he production of a greatly-increased quantity of reen crops?—Yes. I quite understand that.

48379. Sir FRANCIS MOWATT.—You have referred o the kelp industry. Is it much carried on in this district?—About ten years ago I understand that it sed to be very extensively carried on. Between 300 nd 400 tons of kelp used to be made in the year ere.

48380. It has died down here?—Yes.

48381. What are the causes?—I believe that kelp erves useful purposes still, but the price is not now ufficiently attractive to encourage the make. About even years ago I remember myself when kelp used to bring about £6 a ton. Now it brings only from £2 10*s.* to £3.

48382. Do you know at all the reasons that have led to that?—One reason is that the firms seem to have amalgamated to cut down the price. There is no competition.

48383. I am afraid that the chief cause of the reduction in price is that the iodine which they used to make from kelp can now be made from other substances more cheaply?—I know that it can be made more cheaply from other things, but the kelp produces other things, such as saltpetre, as well as the iodine.

48384. No doubt it does, but it is not bought for the purpose. The reason it has fallen in price is that the iodine which was its chief product has gone. The question whether the kelp industry could be more developed in future by a different system of burning is a question on which chemists are now very actively employed, but as things stand at present, I am afraid that you must take it that the reduced price of kelp is not due to the combination of companies, but to the fact that they cannot make the kelp any longer now for producing the iodine as they could up to some six years ago?—Of course I understand that the price of iodine is cheaper now than it used to be.

48385. The real difficulty is the discovery of a new process by which they can make iodine from another substance more cheaply than they can from kelp. No doubt if they can extract other products from the kelp which will become more productive, there may then be an opportunity of developing the industry?—We have large quantities of splendid seaweed along the coast, both drift and growing weed, which could be exported with great advantage to the tillage ground lying inland. The lands adjoining the sea, or in the vicinity, very often are surfeited with seaweed, used as a manure, which might be better applied to the arable lands further removed from the coast. The absence of a railway is the great drawback to our barony. One Government after another for a quarter of a century has, through its leading men, declared its appreciation of this great want, and promises have been made only to be broken or end in froth. There is scarcely any precedent in His Majesty's dominions for such isolation. We are forty-two miles from Ballina, which is the nearest important town, our barony covers an enormous acreage, our people have little opportunity of benefiting by the outer world markets, and yet we have not a line of rail laid in the twentieth century. We have admittedly one of the finest harbours in the United Kingdom at Blacksod, where His Majesty's fleet anchor from time to time, and one would think that from an Imperial point of view a railway to connect with such a harbour would be politic. I care not what attempt is made to redress the grievances of the Erris tenantry—all will be futile unless you open the outer markets to them and facilitate the people from a distance in making the journey to our fairs and markets. The Government who finance a railway to Belmullet and allow the Erris tenant to hear the "hum" of the train, will do more to assist the people than all its predecessors. This is the keynote of relief for Erris. You will enhance the value of their produce by enabling them to trade in extended markets, and the value of every beast raised by the small farmers will be increased about 20 per cent. There is no limestone in our barony, and there is great difficulty in reclaiming bog without the aid of lime. If we had a railway limestone could be imported from Tyrawley, where it abounds, and I venture to predict you would soon see large areas of cut-away bog and unproductive land brought into a state of fertility such as may be seen elsewhere in Ireland.

Mr. Scanlan (*a previous witness*).—I have given evidence that there is limestone in Glencastle and I can prove it. It is of an inferior quality, but it would serve the purpose of liming land splendidly.*

48386. Mr. O'KELLY (*to Mr. Bingham*).—Could you give us an idea why the arrangements between landlords and tenants did not come to a successful termination?—In one case I know where there was an evicted tenant and there was an arrangement made between the tenant himself, the Estates Commissioners and the landlord, they came to an agreement to let the tenant be reinstated at 16 years' purchase, with one year's rent. The landlord did not want to sell in this one case, because it was only one holding out of forty that was being bought and he wanted to

* NOTE.—I since found out there is only a small vein, about 3,000 tons of magnesia limestone, practically no good for land.—F.S.

Aug. 23, 1907.

Mr. Denis G. B. Bingham.

sell the whole estate, but he agreed to take the 16 years' purchase and one year's rent. As soon as the preliminary arrangements were made there was a letter written by the Estates Commissioners saying that the holding was uneconomic, although their own inspector had agreed to the price and everyone else had agreed to it.

48387. That was one estate. I understand that there was a committee established in Erris to communicate with all the landlords of Erris with a view to getting them to sell: would you kindly tell me why it was that the negotiations never succeeded?—I cannot tell you. Personally speaking I know my own case.

48388. You are a landlord yourself. We will take your own estate. Have you been in negotiations?—I have, and I have been offered the large sum of 12 years' purchase for my property. Most of my property is in Judge Ross's hands. As a matter of fact, he sent instructions down to the agent to negotiate with the tenants, for one place especially. The agent went down to that place and he was offered 12 years' purchase, and the matter dropped.

48389. What are the size and the character of these holdings approximately?—There are four holdings of £7 a year rent on it, and there are about twenty tenants. That is all they offered.

48390. Sir JOHN COLOMB.—You say you were offered 12 years' purchase?—Yes.

48391. Suppose you sold at 12 years' purchase and invested your money at 3½ per cent. what income would you lose?—I would have lost from 25 to 30 per cent. at least. That would be outside the deductions made for outgoings.

48392. You live in the district?—Yes, for the last fourteen years.

48393. You employ a certain amount of labour?—Yes.

48394. Then the fact of your being deprived of your income would have deprived the district of the absorption of a certain amount of labour?—Yes.

48395. Your employment of labour would have been reduced?—Yes.

48396. Mr. O'KELLY.—How many men do you employ?—I have eighteen at present.

48397. CHAIRMAN.—They offered 12 years and the bonus is 3 years; that would mean 15 years?—Yes.

48398. That would mean a loss of 25 per cent.?—Yes, roughly.

48399. That means that it was about four years short of what would return you your net income?—About that.

48400. Then 16 years' purchase would return you your net income?—I don't think it would. I did not work out the accurate figures.

48401. Sir JOHN COLOMB.—In sale transactions the bonus disappears in costs?—I have not been able to sell, but I know that there is a good deal of cost.

48402. CHAIRMAN.—Twelve years' purchase would mean a loss to you of 25 per cent.?—If worked out accurately I am sure that it would be more. I have not worked it out. The loss would be a great deal more than the 25 per cent. that I have mentioned.

48403. You are entitled to a bonus of 1½ years on 12 years' purchase, that is 13½ years' purchase, which was represented by the actual offer. What loss would you have suffered?—I cannot tell the exact loss that I would have suffered.

48404. Most Rev. Dr. O'DONNELL.—I was going to ask would there be any advantage in clearing up titles and buying back the demesne?—Personally speaking I should like the whole lot to be sold and that I should be able to buy back the demesne.

48405. Sir JOHN COLOMB.—Suppose your property was £100 a year and you take off 10 per cent. for the outgoings. That leaves you with a rent of £90. Twelve years' purchase at 3½ per cent., with half the bonus for expenses would give you £43 15s., so that you would lose nearly £50 a year?—Yes. I did not work it out. My former answer was only a rough guess.

48406. Sir FRANCIS MOWATT.—You say you employ eighteen men for labour?—Yes.

48407. Are the men who work for you sons of farmers or labourers with small allotments?—Some are my own tenants and some are tenants of adjoining landlords.

48408. Are they agricultural labourers or farmers?—They are agricultural labourers.

48409. Sir JOHN COLOMB.—Who are also tenants?—They are not all my own. Some of them belong to adjoining landlords. I think it would be a great mistake to sell places like those out in the Mullet. There are a great many sandhills and it would be very injurious to sell those to the tenantry.

48410. Mr. O'KELLY.—Why?—The trouble for years has been the blowing of the sands, and bent has been planted to preserve the sands. Some of these places have been taken up by large farmers—graziers if you like. They have preserved the grass on these. They have stopped the blowing of the sand and made the land productive. There are a few cases in which the tenants have parts of sandhills still. In those places you will find that there is hardly a blade of grass left, because they have not the proper sense to preserve it. I think if you take it from the man who has gone to the trouble of preserving and improving it it would be very injurious.

48411. CHAIRMAN.—Why should people be so idiotic as to destroy land which would be productive for them?—I have seen the injury done by it during the last ten years, and I think that something more serious should be done than is done. The only way to save it is to leave it in the hands of the people who have preserved it.

Mr. JOHN GALLAGHER examined.

Mr. John Gallagher.

48412. CHAIRMAN.—Where do you come from?—From Tavanagh, near Bangor.

48413. Are you a member of the County Council?—I am an ex-member and a member of the Mayo County Committee of Agriculture and Technical Instruction and a member of Belmullet Rural District Council and Secretary of Bangor-Erris Agricultural Bank. I am a farmer. I really might as well say at the outset that the evidence I intended giving has been told in such a way that it is unnecessary for me to go into details. There is one matter in which I do not agree with Mr. Scanlan as regards the improvement of holdings. Some question was asked as to whether it would be better to have tenants improve their own holdings or have the holdings vested in the Congested Districts Board for a term of years. From my experience of the matter I believe that the work would be much better done by having it done through some such Board as the Congested Districts Board. I have seen in my neighbourhood a townland that has been purchased by the Congested Districts Board known as the O'Reilly-Dease Estate. The Board carried out operations there for a number of years, and the only fault we find with the system is that they hold on to the particular place too long; but undoubtedly they have transformed the one townland, and what was practically a worthless and secluded village is now one of the most comfortable townlands in the whole district.

48414. Most Rev. Dr. O'DONNELL.—How many years' purchase did the Board give for that?—I heard it was 10½, but I have not heard that in an absolutely reliable manner.

48415. Was one reason why a small number of years' purchase was offered that the rents were not very regularly paid on these estates?—It surely is a reason. To my own recollection, in the case of the estate upon which I reside, the rents were never regularly paid.

48416. Mr. O'KELLY.—In any case you think it would be a wiser thing to have estates, such as you find in Erris, in the hands of a body like the Congested Districts Board for a term of two or three years?—Yes; but I wish the term to be a limited one. It is rather detrimental to other places to see operations carried on for a number of years in one particular place on the other side of the road. I live close to this townland to which I have referred, and when I compare the reductions that have been given in the case of some of the holdings on this estate I find that they are deriving an income instead of having anything to pay from the game and fishing rights

8417. Sir JOHN COLOMB.—Who pays it?—A gen-man who has the game rights bought from them—Mr. O'Brien.

8418. He pays so much a year or a lump sum wn?—He pays so much a year to each tenant. He its it. We on the other side of the fence have to tinue to pay the full rent, and looking at the mat- from a broad standpoint, it is only ordinary man nature that if that state of things continue Government should be prepared for agitation. would require to have the patience of an arch-gel to sit content and see our neighbours across the ce in such a good position while we remained at mercy of the landlord, and therefore looking at it m an Imperial point of view, any Government rthy of the name cannot fail to see the gravity of situation, and should immediately enact remedial islation if the country is not to bleed to death by owing the present system to prevail.

8419. CHAIRMAN.—You wish the thing transferred quickly as possible because you think that that ll release the energies of the Board for further pur-ses in the district?—Yes. I wish now to refer to necessity of procuring lime in the district. I was opinion up to the present that there was no lime in s part of the district. Mr. Scanlan says that there lime at Glencastle. I am glad to hear it; but there in the eastern portion of this district excellent estone quarries. There are quarries along the Owen-bre River three miles to the east of Bangor. At one ne at a meeting of the County Committee held at Bal-a there was a sum of money to the credit of each the congested districts in the county. I attend y few of the meetings, but I made it my special siness to go to that meeting in order to have this ney expended in testing these limestone quarries. e County Committee adopted this recommendation, t the Department of Agriculture said that they ld not sanction the matter, and so it fell through. got so disgusted that I have hardly ever attended a eting since then. Mr. O'Kelly was present at that eting, and the proposal was adopted unanimously.

8420. Mr. O'KELLY.—Was not it rather presump-ous for you or me to quarrel with Mr. T. P. Gill?—thought it curious that the unanimous suggestion the County Committee could not have effect given it. I hope that this Commission will take notice of at particular matter, and that it shall be incum-nt on whatever Board, whether the Estates Com-issioners or the Congested Districts Board, that has e re-distribution of holdings and the re-modelling estates, to have some provision made for procuring me for the landholders of the district for their hold-gs.

8421. CHAIRMAN.—Why don't you try the Con-sted Districts Board?—I wrote to them on two asions. I daresay it was about the time when the gotiations with the Department of Agriculture iled. If my memory serves me rightly, their reply as that they would not interfere as the business was ansferred to the Department of Agriculture .

8422. Most Rev. Dr. O'DONNELL.—Very likely. You t it now strongly to the Commission that one of e things to be done for the improvement of areas ce this is to see that lime is provided?—Yes. I have ad the reports of all the agricultural instructors roughout Ireland, and I think that in every case ey have dwelt on the necessity of lime. The want lime tells far more considerably in mountain dis-icts like this. There is another matter that I may ention. I have heard Mr. Bingham's evidence, and was very much surprised at his line of argument, at by multiplying the number of tenants you would ing down the price of store cattle. It seemed as if would confine the sales of cattle to the barony of rris, and build a wall of brass around it, and would no man in or out. To my mind, if every acre of nd in the barony was occupied, as it ought to be, ith tenants on economic holdings it would not fect in the smallest way the price of cattle one way another. The little cattle that could be produced Erris would not have the smallest effect one way another on the price of cattle.

8423. Sir JOHN COLOMB.—You recognise that what ould happen in Erris would happen all over Ire-nd?—I do recognise it, but there are other counties Ireland under the tillage system already, and if u are going to have any interference with the price cattle the change would have been wrought long go.

8424. I do not follow your argument. All I am pointing out is that taking Erris as an illustration the same policy would be carried out universally in the congested districts, and that according to Mr. Bingham's view there would be more cattle produced, and there would a fall in prices?—Assuming that it would be carried out all over Ireland, which I do not believe is at all likely to happen, no matter how benevolent the intentions of any Government, it is my firm belief that every holding so sub-divided and so sub-let would be capable of carrying more cattle, and every townland that would be so sub-divided, even though supporting a larger number of people, would be still more capable of keeping a larger number of cattle, and I could follow my argument up with figures. I went to the trouble of getting figures in reference to the townland I live on myself, and townlands that are similarly valued under the grazing system, and I could show there were more cattle on the townland with more people than on that which was entirely given to grazing, and then where is the advantage in other respects in having so many people living on the place instead of having it waste. There is another aspect of the question which I have not heard dealt with, and to which I wish to allude. If the vexed question of dividing up the grazing ranches has got to be taken up it ought to be taken on a broad and wide basis if it is to be the means of relieving congestion within the barony. It is now a matter of history how the population was driven on to the barren wet lands of this and other congested districts. There was no security against the tyranny of capricious evictors. What was allowed to be done by one Government should be undone by another, and the people should be put back on the lands where they could live.

8425. Do you think would the people of Erris be willing to go to Roscommon?—I have heard statements made to-day that they would not go. I know that they would be only too glad to go. I would not have the smallest objection myself to go to-morrow morning. Our people have to go much further to look for a living throughout the wide world. Of course some old people, or some people who may not have courage enough, or some shaky people who may think that a home in Erris is the best place in the world—these people are to be found in every place and they may not like to go. I have talked the matter over with many of the younger people and they would go to-morrow if there was any such thing, but a man would naturally first want to know where he was going to. I happen to be secretary of an agricultural bank in Bangor, and I wish to say that I consider that they should be placed on a more sound and secure basis. I know from my own experience that they are a great benefit. Loans are given for agricultural purposes, buying seeds, young stock. We get a small grant by way of a loan from the Congested Districts Board, and then we have to borrow money otherwise. The drawback is that they are only governed by the Irish Agricultural Organisation Society, and the society, I think, has to be subsidised by the Department of Agriculture. I had an interview the other day with Mr. Campbell on a deputation from the Department that come round making inquiries into them, and I said I intended to suggest to this Commission that these banks should be put on a sounder basis by being attached to the system of land purchase.

8426. Sir FRANCIS MOWATT.—Do you mean subsidised?—If you would like to call it a subsidy.

8427. CHAIRMAN.—What would you suggest?—We have an agricultural bank in Bangor. There is no allowance made for the pay of a permanent secretary. He is allowed a merely nominal sum. I have acted as secretary for the last five or six years, and I would not receive the small sum they could afford to give me. As the business increases there is naturally a good deal of labour attached to the position. The business of the bank has to be carried on in some schoolhouse, which is not prominent enough to enlist the confidence of depositors. If it were possible that this bank were attached in some form to the system of land purchase it would enlist the confidence of depositors as well as borrowers. I think if there was an arrangement whereby there would be deposits given by the Congested Districts Board, and that they would pay the expenses of a secretary and the rent of a house or any suitable building that would be available in any small town,

Aug. 23, 1907.

Mr. John Gallagher

there would be likely to be a good deal of local deposits given, and then money should be lent it for its purposes. This would be a benefit to the people. One of the purposes, for instance, would be the repayment of an annuity. That is what I mean by associating with the land purchase system.

48428. Sir JOHN COLOMB.—Do you mean that the bank should advance money for people to repay their annuities?—It would be one of the matters for which they could borrow, and for that reason it should be either subsidised or strengthened in some way by a Department of the Government. Another matter that I would wish to refer to is the game rights of land, assuming that there would be a transfer of property. I have known disputes about game to be the cause of endless trouble on many estates. I have a knowledge of game and fishing rights, because on the holding on which I live there are both. The game is partly reserved by the tenant and partly by the landlord. In the event of a purchase the landlord's right would be likely to be held. I think it would be detrimental to the interests of the tenant if the rights of game and fishing were not vested in him. I have known cases of considerable damage being done by parties looking for game, throwing down fences, and so on. I would not be inclined to pay so much rent for a holding that another person had the right to hunt and fish over as I would if the game and fishing were reserved to the tenants.

48429. Suppose a landlord has an estate and that the game and fishing bring him in £100 a year, you propose that the game and fishing which brought him in £100 a year should be vested in the tenant?—Yes.

48430. Who is to pay the landlord—who is to find the money to pay for this loss of £100 that is inflicted on the landlord?—Speaking for the tenant, I should not care who would find it for him, but the tenant should not find it for him.

48431. That is a matter which the Commission must consider. Do you propose that certain rights worth £100 a year should be taken from the landlord for nothing, or that he is to be compensated for them; if he is to be compensated and paid, who is to find the money?—The landlord never had the full rights of game, because it is within a tenant's power if he chooses to destroy the game, and for that reason, that the game is on his own land; and though the game may by the law of the land belong to the landlord, it is not by the law of nature.

48432. Are you aware that by the Land Act of 1881 the tenant's exercise of what you call his rights is one of the things that would enable the landlord to take the tenant-right of his holding?—Yes, but I am aware of another section that the tenant is entitled to claim trespass for any injury done to his land.

48433. If fences are thrown down by anyone in the pursuit of game the tenant has an action against him at common law?—I know that, but I am assuming that we are going to be converted into peasant proprietors, and will have to bear annuity, taxes, and all other burdens, and I would like to know how the line of justice is to be drawn if another man may come and break down our fences and trample down our land. That may be done if the landlord has the right to come in looking for game.

48434. No right of game authorises a man to do injury by throwing down fences. At any rate, you have not made up your mind as to who is to pay? Of course, I would only say the party that we always throw the burden on to—the Government.

48435. Most Rev. Dr. O'DONNELL.—When there is a project of sale from owner to occupier, does not the question of the game come up and enter into the bargain?—Yes.

48436. If the game passes then to the tenants it is one of the things for which the owner is paid?—Yes.

CHAIRMAN.—You cannot get an advance for the purchase of game.

48437. Most Rev. Dr. O'DONNELL.—Don't the terms to the tenant vary a little one way or the other for the game?—They do.

48438. Consequently the money which the tenant agrees to pay is for the land and game when the game passes to the tenant?—Yes, but if the landlord so chooses the tenant may be left without the game, and this is why I mention the matter. I think that an amendment of the law should see that the tenant should not be allowed to be left without the right to the game. I recollect reading that on the Dillon Estate Mr Commissioner O'Brien would not sanction the sale because the game was sought to be retained and I recollect him saying that when a man was a tenant purchaser nobody should be allowed to come in on his land.

48439. You are perfectly right. The Congested Districts Board proposed to retain the game and turn it to the best account for the advantage of the tenants. Mr. Commissioner O'Brien said that the should be allowed to have it for themselves?—I would wish to say that the law should be as Mr. O'Brien expressed it, that no tenant should be allowed to purchase without having the game.

48440. CHAIRMAN.—How long would he have an game?—It is a matter that could be easily arranged by vesting the game in some public department and some authority to look after it.

48441. Mr. O'KELLY.—Or a committee of the tenants?—Yes. It is quite easy. On this little estate that I mention where the tenants have an interest in it I would like to see the man who would come in to poach on them.

48442. Sir JOHN COLOMB.—You would take the game from the landlord, but you would vest it in some public authority so that the game and fishing might be preserved for the public, and a profit made out of it for the tenants?—Yes. I would not say so much as regards the profit, but I would say safeguard the against any parties going through the land interfering with them.

48443. CHAIRMAN.—You could not let the shooting rights without letting them come over the land?—would be a matter of agreement.

The Commission adjourned.

NINETY-SIXTH PUBLIC SITTING.

MONDAY, AUGUST 26TH, 1907,

AT 11.0 O'CLOCK, A.M.,

At the Schoolhouse, Achill Sound.

Present:—The Right Hon. Sir FRANCIS MOWATT, G.C.B. (in the Chair); The Right Hon. Sir JOHN COLOMB, K.C.M.G.; Most Rev. Dr. O'DONNELL; JOHN ANNAN BRYCE, Esq., M.P.; CONOR O'KELLY, Esq., M.P.; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Mr. JOHN M'HALE examined.

Aug. 26, 1907.

Mr. John M'Hale.

48444. Sir FRANCIS MOWATT (*in the Chair*).—You represent the Westport Rural District Council?—Yes. Westport Union contains 347,819 acres of land, with a population of 34,672 persons. Its poor law valuation is £45,069. The population of the union in 1881 was 40,974. In 1901 it was 37,381, showing a decrease of 3,593 in twenty years. In 1841 the number of houses was 14,521, while in 1891 the number was 6,509, showing a decrease of 8,012. Three exterminating landlords were the principal cause of this awful decrease, namely the Marquis of Sligo, Sir Richard Annesley O'Donel, Bart., and the Earl of Lucan. Actuated by religious bigotry as well as personal greed, they remorselessly flung their tenants on the roadside, where they perished by the thousand in the famine years and afterwards, even though most of the tenants did not owe one shilling rent. These landlords, and principally Sir Richard O'Donel, made an infamous attempt to exterminate the native population and colonise their estates with English and Scotch planters. The cleared lands were kept constantly advertised in the Scotch and English papers as ready to let to persons of either nationality—with the condition always stated "no Catholic need apply." Those who were permitted to remain on the surrounding lands on paying the half-year's rent always received a printed eviction notice on the back of their receipts. This awful tyranny led to disturbances from time to time, and when the Famine came many thousands perished of hunger and disease, having been flung on the roadside with no cover for shelter but the canopy of heaven. In Derrylahan alone after the awful ravages of the Crowbar Brigade, 100 families perished of hunger. Sir Richard O'Donel was the heartless evictor, and I can point out even to-day where numbers of them are buried beside their own houses in unconsecrated ground, the graves being yet very clearly defined. The tenant-right of this place has been purchased by the Congested Districts Board some years since, and for the reasons I have stated there is one corner of this farm known as "The Churchyard." This state of things obtained especially on the estates of the three evictors I have named, and created the unnatural and infamous state of land monopoly which I will refer to presently, and which demands immediate and permanent reform. Sixty-six graziers are at present in possession of 98,790 acres, while thirteen landlords hold in fee 52,145 acres for grazing purposes alone. All the graziers are non-residential, eighteen of them shopkeepers and publicans in the different towns.

48445. In the neighbourhood do you mean?—In the Unions of Newport, Westport, and Castlebar.

48446. Do they reside outside the unions?—Not outside the unions, but outside the farms. There are about 4,089 occupiers ranging in valuation from £1 5*s.* to £8, while about 52,000 acres are held by graziers on the eleven months' system. According to a statement made out in 1902 by the Assistant Clerk of the Union, the valuation within its area is about £1 per individual. Its superficial area being 347,819 acres would give ten acres per individual or fifty acres per family if properly distributed.

48447. Sir JOHN COLOMB.—Do you mean counting a family at five?—Yes, sir, about five.

48448. Most Rev. Dr. O'DONNELL.—What class of land are you speaking of?—Well, it is both mountainous and arable land. There are 5,322 rated occupiers in the union, and 3,041 are under £4 valuation, and 1,048 more rated from £4 to £8, making in all 4,089 rated at or under £8. Of the remaining 1,233 occupiers in the union, at least 500 more are barely removed by one degree of poverty above their 4,089 neighbours. In fact almost all the holdings are below subsistence point and thoroughly uneconomic. The fact is there are 4,089 out of 5,322 families, say about 20,000 individuals, whose holdings are incapable of affording them subsistence, and who are only preserved from year to year from perishing of famine by the earnings of the adult male and sometimes female population in their annual migration to England and Scotland, and by the remittances of relatives in America. Two special trains per week during the season from Achill, Newport, Westport, and Castlebar are despatched with small farmers settling as labourers on farms and public works in England and Scotland; and there are also two sailings from Westport to Glasgow and Liverpool by which the migratory labourers, male and female, are conveyed to each place for about 5*s.* per head; there are besides this several trains per week conveying young emigrants, the flower of the population, to Queenstown for America. In 1901, for instance, there left for the harvest fields of England and Scotland alone from Westport station 4,178 migratory labourers. The emigration from the union since 1851 has been, I believe, considerably over 30,000 persons. The unnatural state of things obtaining is the result of an infamous land monopoly by the few to the detriment of the many, as shown by the fact that one grazier, Mr. Houston Boswell, of London, an Englishman, occupies 24,763 acres of land within the union.

48449. Sir JOHN COLOMB.—How much of that is arable, and how much of it is mountain and bog?—It is intersected with arable and mountain land, and a great deal of it is mountain and bog.

48450. Most Rev. Dr. O'DONNELL.—In what electoral division is it?—It is out at the Killeries, near Bundorougha principally.

48451. Sir FRANCIS MOWATT.—When you say it is in his occupation, what do you mean by that. He is not resident. Does he let it for grazing, or what does he do with it?—He buys bullocks and grazes it himself. He lives in London, and comes occasionally to see after the stock, and goes away again to London.

48452. What acreage does he hold?—24,763 acres.

48453. Sir JOHN COLOMB.—When did he acquire it?—Well, he has it about thirty years.

48454. Most Rev. Dr. O'DONNELL.—Has he it as tenant or owner?—As tenant.

48455. From the Marquis of Sligo?—From the Marquis of Sligo, but I think he holds it under lease. Whilst this monopoly exists in the very shadow of Westport House, the average at Carrowbawn amongst twenty-three tenants is 10½ acres, and the average valuation £2 12*s.* Carnalurgan—

Aug. 26, 1907.

Mr. John M'Hale.

amongst eight tenants the average is 9 acres; average valuation £1 6*s.*, and so on. The same system prevails on the Sligo estate below Newport, for instance at Lettermaghera.

48456. Most Rev. Dr. O'Donnell.—In what electoral division?—In Shramore East, and it is one of the most inaccessible places in Mayo, where forty families exist on a valuation of £60, or an average of £1 10*s.* per family. The system is rundale, and one man valued 14*s.* has patches of his land at sixteen different places.

48457. Mr. Sutherland.—What is the name of the place?—Lettermaghera.

48458. Sir John Colomb.—In what electoral division?—I think it is in Shramore electoral division. These people could throw a stone, almost, into a vast cattle ranch of nearly 12,000 acres, whose awful solitude is only broken occasionally by the crack of some imported sportsman's gun or the barking of a herd's dog. The Marquis of Sligo is the principal owner.

48459. Most Rev. Dr. O'Donnell.—Is that in Newport East?—It is within a mile of Newport East. It is in Shramore electoral division.

48460. Mr. O'Kelly.—Is Shramore in the Westport Union?—Yes.

48461. Is it a distinct electoral division?—It is. It is nearing Newport East. Newport East and Shramore are side by side. The operations of the Congested Districts Board have done very little for the Union, except the purchase of some few hundred acres of land, on which tenants are now living. The land was purchased too high, and it is anticipated that the occupying tenants will never be able to meet the instalments. The Stoney estate was purchased, in part, about seven years since, at a reasonable price—16½ years' purchase, but the handing over of 2,000 acres of mountain by re-sale to Mr. Stoney seems a job which cannot be easily explained. The tenants were in hopeless congestion, I suppose most of them with an average valuation of 14*s.*; but there was this mountain of 2,000 acres that they used to send cattle on, and after the Board had had it in their possession six or seven years they handed back this 2,000 acres, re-sold it back to Mr. Stoney at a nominal price, I think £600, and where I suppose the tenants expected to have at least the grazing rights, the land was taken up for sporting purposes.

48462. Sir Francis Mowatt.—The Congested Districts Board had held that for six or seven years?—Yes.

48463. And during that time what happened; did the tenants graze it?—They did. The tenants sent grazing cattle on it, and the Congested Districts Board charged for the grazing something about a shilling per month. That was sold by Mr. Stoney about 1900, and in 1906 they sold these 2,000 acres back again to Mr. Stoney.

48464. And the tenants had grazing rights over this land all along?—Not grazing rights; but the Board took cattle from each.

48465. But before the Board bought it?—No.

48466. And then the Board bought it and let it out to the tenants?—Yes, as grazing.

48467. And do you know did the tenants avail themselves of that and send their beasts on?—Oh, yes.

48468. Any one?—Any one that required it sent their cattle on at a nominal price.

48469. Most Rev. Dr. O'Donnell.—It did not come to much?—No, it did not, it inconvenienced them greatly.

48470. Sir John Colomb.—Did they all send their cattle there?—Yes, sir.

48471. There was a great crowd of cattle on it then, was there?—There was a great crowd of cattle, considering that the place is very poor.

48472. Is the Commission to understand that in consequence of the re-sale to the proprietor, Mr. Stoney, the tenants suffered greatly, because previous to that they had had a great deal of grazing which was cut off by that?—Yes.

48473. That is your statement to the Commission?—Yes, sir.

48474. Mr. O'Kelly.—The Stoney estate was sold to the Congested Districts Board?—It was sold under the Ashbourne Act of 1890 to the Congested Districts Board.

48475. Bodily?—Yes.

48476. Including these 2,000 acres?—Yes.

48477. I suppose the tenants on the property are poor tenants?—Very poor.

48478. And, as you stated a while ago, this was a great convenience to them—this 2,000 acres?—Yes.

48479. Was there any reason assigned for re-transferring the 2,000 acres to Mr. Stoney?—Well, there was a reason. However, it was supposed that the Board made some sort of a compromise with Mr. Stoney that he would sell an arable farm called Rossyvera, in the vicinity of the place, and the Board bought Rossyvera; but I may say it is doubtful who has the right title to it, and the works are suspended since then. He sold it to the Board at an enormous price—I think thirty-three years' purchase of the valuation, or something like that, about twice the price of it, and after it had been twelve months in the possession of the Board it appears their rights were disputed, on the ground that it belongs to a brother of Mr. Stoney, a Colonel Stoney who is living in India.

48480. How far is Rossyvera from the grazing lands to which you made reference—the mountain land?—Two miles.

48481. Have the Board got Rossyvera on their hands now?—I could not say. Mr. Jones is the head landlord of the place, although Mr. Stoney received this enormous price.

48482. Did the purchase of Rossyvera make up in any way for the re-transfer of the 2,000 acres to Mr. Stoney?—No, it did not.

48483. Most Rev. Dr. O'Donnell.—What is being done with Rossyvera?—The Congested Districts Board commenced operations there, and commenced to build houses, and Sir Roger Palmer's agent, Mr. O'Donnell, of Castlebar, prevented them from working, and it has appeared since that Mr. Stoney is disputing their title to the place at all.

48484. In the meantime, what is being done on the land?—It is left idle.

48484A. But what is being done with it?—There are grazing cattle on it.

48485. Whose cattle are they?—The general public; cattle belonging to the district.

48486. Are they the tenants that would utilise this mountain land?—Yes.

48487. And, therefore, though they have not the mountain, they send their cattle to these 2,000 acres?—Yes.

48488. Do you not think that it is in the interest of the tenants at all events that the Board made that exchange?—I think not. I think it was in Mr. Stoney's interest.

48489. Sir Francis Mowatt.—Do you say that this property, of which the title has been disputed, has been paid for?—Well, I suppose it is in the course of being paid for at all events.

48490. But there is a difference you know, if it is paid for or if it is not paid for, and they are two different things, and it seems odd that they would pay before the title is completed?—But they commenced work on it.

48491. Most Rev. Dr. O'Donnell.—Would not the people like to get the land?—Yes.

48492. And do you not think it would be a great matter if these 200 acres were secured to these poor people, whose low valuation you have described to us?—So I do, but not at such an enormous price.

48493. Do you not know that a public board, anxious to relieve such a condition of things as you have described, will now and again pay a big price?—Well, I am sure the place could have been bought some years ago at seventeen or eighteen years' purchase, or less. Before the passing of the Act of 1903 nearly all the landlords of this country would have sold it at less.

48494. But were not the people very anxious?—Yes.

48495. Would you be surprised to hear that the amount which the people gave for this grazing of the mountain range was a very small sum?—Oh, yes, it was.

48496. Would not that show that they did not utilise the mountain very much?—No; but the quality of the mountain is bad.

48497. Then, if the quality of the mountain was so bad, was not it a very good thing to try to get, in place of 2,000 acres of bad mountain, 200 acres of good arable soil?—I do not think so, because sometimes for months in each year mountain grazing is as good as arable for fattening purposes—that is good mountain grazing—and I understand that this 2,000

es, from the fact of its running parallel to the ants' holdings on the northern side all the way uld be a permanent accommodation to the people ere if allowed three months of the year.

48498. I would like the people themselves to ex- ess their preference one way or the other, to have 200 or the 2,000 acres?—There is a difference about it.

48499. All are not of your way of thinking?—.

48500. Then, about the price charged for those 200 res; did not the Board charge Mr. Stoney the ice which Mr. Stoney had received?—Yes. On the lue of the place I think that would amount to over irty years' purchase.

48501. Did you ever hear that Mr. Stoney made it condition of selling the 200 acres of good arable nd that he should get back these 2,000 acres?—Yes, t at the same time I was on a deputation to Mr. mes, the head landlord of the place, and he said, ether Mr. Stoney liked it or not, he would be very ppy to get rid of it, and sell it to the Congested stricts Board or the Estates Commissioners.

48502. That did not happen?—That did not hap- n.

48503. Mr. SUTHERLAND.—He did not offer it?—I not know; but he told me and others that he uld be satisfied to dispose of it at any time, and at Mr. Stoney was only a middleman. And the ct is attributed to this, that there was a former nd agent of Mr. Stoney's appointed Assistant nd Valuer to the Congested Districts Board.

48504. Mr. O'KELLY.—Was it chief inspector?— , yes, and it was supposed that he favoured Mr. oney greatly in this transaction.

48505. Mr. SUTHERLAND.—Was there no proof yond that?—No proof beyond the facts.

48506. Sir FRANCIS MOWATT.—You mean to say at just before the re-sale took place this gentleman as appointed chief inspector or assistant chief in- ector, and that the purchase or re-sale was carried t by him?—By him.

48507. Most Rev. Dr. O'DONNELL.—But he had thing to do with the transaction?—I could not y.

48508. Sir FRANCIS MOWATT.—I think you have st said that it was carried out by him?—He went und there superintending the work. It was between mself and Mr. Doran, and they did it both, and was assisting Mr. Doran.

48509. And this gentleman, you say, carried on e negotiations for the purchase?—Yes, sir, and easured the place.

48510. And therefore, as you have told the Bishop at you do not know that he was concerned with e transaction, it must be one or the other?—Yes, .

48511. Then he carried out the negotiations?—He ist have.

48512. And if he did not know anything about it, d did not carry out the negotiations, which of ese two stories do you wish to adopt?—Well, I opt this, that he made a report and that he tually measured up the place, with Mr. Doran's, e chief inspector's, consent, of course.

48513. Most Rev. Dr. O'DONNELL.—You do not t that to the Commissioners from your own know- ge, I suppose?—No.

48514. That is your impression?—Yes.

48515. Sir JOHN COLOMB.—You are a farmer?— s.

48516. What is your holding?—Thirty acres

48517. Have you other business besides farming?— , I have. I am an organiser for the National ganisation.

48518. But do you call that a business?—I do. It a paid business.

48519. Well, have you from this circumstance any tter means of knowing the details of transactions tween a landlord and the purchasing authority an anybody else?—Oh, yes; I have a greater inte- st in the land question.

48520. And have better means of knowing exactly nat the true facts are than anybody else?—Well, . There are few that know just as much.

48521. I understand your general statement to be nat is common report?—No sir, but actual figures.

48522. Known to you?—Known to me. I went er the rate books myself.

48523. Of course these are open to anybody, but the actual details of transactions between the Congested Districts Board and an individual landowner you have got no opportunity of knowing better than anybody else?—I saw the Blue Book.

48524. That Blue Book is open to anybody else?—It is open.

48525. And therefore we can only take your statement as a statement of what is believed generally in the district to be the facts?—Yes; quite so.

48526. But you cannot substantiate those facts better than anybody else?—No, sir.

48527. Most Rev. Dr. O'DONNELL.—On the general question, I suppose, what these small men would be chiefly benefited by would be the addition of good land to their holdings?—Yes, sir.

48528. The mountain grazing would be useful, but it is almost essential, is it not, in order to make their holdings economic that good land should be added to the holdings?—Yes, it is very essential; and a number of them should be migrated to better lands than those they live on at present.

48529. Sir FRANCIS MOWATT.—You mean change of place within the district?—To available lands within the union.

48530. Most Rev. Dr. O'DONNELL.—You have been making observations all through the union?—Yes.

48531. Do you think is there more grass land in the union than would provide economic holdings for those who have uneconomic holdings now in the union?—Yes, a great deal more grass land.

48532. And there would be much room for others?—Besides supplying the local wants of the men in the union.

48533. Sir JOHN COLOMB.—Are you including in your calculation rough mountain?—Well, a lot of rough mountain.

48534. Sir FRANCIS MOWATT.—And in addition to that, is it land that you think that other people could be migrated to from other parts of Ireland?—Well, I should say that part of it is good, parts of it intersected with rivers, and even in the mountainous parts, and by a little reclamation and toil it could be made very good land.

48535. Most Rev. Dr. O'DONNELL.—I find on the figures you have that the Board gives a mountain for a price of £600 in order to get a property in arable land at a price of £3,300?—Yes, or about that.

48536. Mr. KAVANAGH.—What has been done with the 2,000 acres that have been resold?—It has been walled in, and there is a lot of fences made on it, and it has been taken only as a game preserve.

48537. Is there grazing on it?—Some of the tenants get grazing on it from Mr. Stoney.

48538. The benefit of this is not withdrawn from the tenants?—It all depends on himself.

48539. But, as a matter of fact, it appears he is giving grazing to the tenants?—Yes, a certain number. There is another thing I would like to mention, and that is the purchase of the Newport Workhouse by the Board, a splendid modern building, erected at a cost of £13,000, purchased for the nominal sum of £450.

48540. Purchased at a nominal sum by the Congested Districts Board?—Yes.

48541. Whom from?—The Local Government Board.

48542. Most Rev. Dr. O'DONNELL.—They made a good bargain there?—They did. £450 for a building erected at a cost of £13,000.

48543. Mr. SUTHERLAND.—You said this was a modern building?—Yes, sir.

48544. Recently erected?—Erected about 1848.

48545. And now found to be useless?—Found to be useless. Newport Union was amalgamated with Westport Union and the building remained unoccupied. Newport Union was added to Westport and there the building remained.

48546. And one building in one of them would serve both It is serving both now?—Yes, sir.

48547. Is that because pauperism is decreasing?—No, sir, it is not, but because the area of Newport Union was too small. Our valuation was something like £14,000, and the rates got very heavy, coming up to 5*s.* in the pound, and there was an agitation amongst the people, so that the Local Government Board consented to amalgamate the Newport Union with Westport, and the buildings they erected for the purpose of a workhouse at Newport remained derelict and were unoccupied.

Aug. 26, 1907.

Mr. John M'Hale.

48548. I thought it would be an encouraging sign that pauperism was decreasing and that a poorhouse was not required?—No, sir, pauperism is not decreasing.

Look at the policy of it. If it was a good policy twenty years ago it cannot be a bad policy now.

Sir Francis Mowatt.—I do not think the witness is disputing the advantage of purchasing this.

48551. Mr. Sutherland.—What I wanted to know was whether it was, in his opinion, owing to decreased necessity for it?—No, sir. Newport was amalgamated with Westport on account of the rates being very high and Newport Union being very small, and the building of the Newport Workhouse remained derelict, with a caretaker, and the Congested Districts Board bought it recently at, I think, £450. I was at the auction.

48552. Sir John Colomb.—It was sold by auction?—Sold by auction.

48553. And at public auction it was knocked down to the Congested Districts Board, as the bidder, for something about £450?—Yes, sir.

48554. Well, what then?—If the building is properly utilized for some reproductive purpose it would be a good thing, for the building is favourably situated, within a few hundred yards of Newport Railway Station, with a siding much nearer, and in close proximity to one of the finest quays and channels in Mayo. I would suggest the erection of a woollen factory, or something of that sort, worked for the purpose of giving employment, as well as keeping people at home. It is beside a siding and near a beautiful bay.

48555. Mr. Kavanagh.—Why does not private enterprise step in and find out all its advantages?—Unfortunately we have no private enterprise, or hardly any, in the West of Ireland. We have very few rich men, and they are not of a very speculative turn of mind. We have one man there worth a quarter of a million, and I do not think he would take a £5 share. And he made it all in Newport, in the town.

48556. How is it that you did not point out all these advantages to somebody further away than in the West of Ireland. What you suggest is that some effort should be made to apply this to some reproductive purpose?—Yes; and it has one of the finest waterfalls perhaps in Connaught, except the one at Cong, within a mile of the place, an enormous and powerful waterfall, giving a height of 21.4 feet, with an inexhaustible volume of water from Lough Feagh. If a power house were erected there it would work a factory in almost any town in Ireland.

48557. Sir John Colomb.—Do you suggest that a public body like the Congested Districts Board should embark in an experiment involving an immense sum of money unless they could see their way clearly to making it pay?—Well, I do not; but I am certain it would pay.

48558. But you admit that must be a matter of opinion, whether it would pay or not?—Yes.

48559. And that it would require the most sound calculation?—Of course it would.

48560. And careful consideration of all the circumstances before any public body would embark in an undertaking of that sort. You admit that?—Yes.

48561. In fact you are recommending that it should be carefully considered?—Yes.

48562. Most Rev. Dr. O'Donnell.—Then is this all you wish to say about the workhouse?—Yes.

48563. Is it in a scheduled district or is the district not scheduled?—It is scheduled.

48564. Had the people in the locality any special project before their minds which they thought the Congested Districts Board could promote in this building?—Well, they had.

48565. What was it?—I will tell you. The public generally were talking of two or three different ways of utilizing the building; that is, as a bacon curing factory, or even a woollen factory.

48566. I suppose Foxford was occurring to the people in the locality as something that could be duplicated there?—It was indeed.

48567. Did you ever ask the Congested Districts Board to go into that and see was it a feasible thing?—Well, I did, before they purchased it. I went into the offices in Rutland Square and had a long conversation with Mr. Mitchell and Mr. O'Brien about how the place could be utilized for different purposes, and I think on the representations I made to them they sent down a man to purchase it, and he did purchase it.

48568. That followed from your representations?—Yes.

48569. Is there a large population in the neighbourhood?—Yes, there is.

48570. Would there be a dense population within three miles' radius?—Well, not a dense population, but it is within 200 yards of the town of Newport, and there are a great many tenant farmers within a radius of three miles. It is pretty well populated around the town.

48571. There is quite enough population for mill purposes?—Yes, except that to build farm-houses they are throwing down houses and utilizing the stone.

48572. Would not you say that there is more than enough still for such a purpose as you suggest?—Yes.

48573. It is only the fever hospital and houses like that that are being demolished?—Yes.

48574. Mr. O'Kelly.—I should like to ask a question before you go away from that. Was this mountain land, the 2,000 acres, ever grazed by the local people?—Well, not to my knowledge, but I think Mr. Stoney gave them grazing on it at a certain sum per head. Before the Congested Districts Board bought it it was in his possession actually as the landlord.

48575. Did Mr. Stoney allow the local people to graze this mountain?—Yes, and come off and on, but he charged them.

48576. Then you would not agree with the statement that these 1,965 acres of rough mountain land had never been grazed by the tenants?—No, I would not. It had been grazed off and on; and it was like commonage. There were no fences or anything.

48577. Most Rev. Dr. O'Donnell.—But they had no grazing rights on it?—No.

48578. I have it here in the memorandum of the Board in 1906, "1,965 acres of rough mountain land which had never been grazed by the tenants." That is from the statement by the Congested Districts Board?—Yes, but it had been grazed in this way, that Mr. Stoney accommodated his own tenantry with grazing from time to time; but he took money for it.

48579. Most Rev. Dr. O'Donnell.—That is true, as they had no grazing rights upon it?—Yes.

48580. Sir John Colomb.—The 2,000 acres in question is bad land?—It is. Now the next point is that the fishing industry along the coast is neglected for the want of harbour and pier accommodation along the western coast, and on account of the inutility of the piers already built at Lecanavey, Mulranny, Malcomb and other places. These piers have been constructed by the Board of Works, and they are perfectly useless to people. They are not far enough advanced in the sea to enable the boats to come up with loads. I believe that if there had been extra piers built at Achill and Dooega, and also at Rosmuriveach and other places, and if the harbour of Mulranny were utilised as a harbour of safety for fishing boats, the fishing industry would be encouraged and improved along the coast.

48581. Sir Francis Mowatt.—If that were done?—Yes, and that would have facilitated them sending their fish away. They could make a siding within three-quarters of a mile of Roigh pier, which has a beautiful well-sheltered harbour. The Midland Great Western Railway Company could make a siding, and they would have a regular market for their fish.

48582. Sir John Colomb.—Was there any grant given or offered out of the Marine Fund for Roigh Harbour?—No, I believe not.

48583. At all events you have no knowledge of any steps taken by the Government or any State Department to carry out the project you suggest?—No, sir.

48584. You have no knowledge?—No knowledge.

48585. Most Rev. Dr. O'Donnell.—How far have they as a rule here to cart their fish at present to Achill Sound Station?—Some of them four, five, or six miles in some places.

48586. Do you know Achill well?—Not very well.

48587. But it would be quite possible that the fishing industry could be developed round that?—If they got boats for the deep sea fishery.

3588. What do you recommend?—I recommend the ance of a loan at a limited rate of interest and ayment for the purpose of buying good boats and and carts, and I am sure that the people of ill are a fine hardy and robust lot of fishermen, if they had facilities they would make a good ery.

3589. Where would the boats be safe at anchor?— safest place I know is Roigh Harbour.

3590. Sir Francis Mowatt.—I think on this par- lar question it would be useful if I said a few ds which might prevent an otherwise natural dis- ointment. This Commission has no power, and it not within the terms of its reference to allow them deal with the individual relations of particular ces or particular landowners or particular tenants. we are empowered to do is to inquire generally o the best steps to be taken in the different counties the mitigation of distress, and it would only lead disappointment if it was thought that we had power make special recommendations for particular piers particular alterations of the relations between a rticular tenant and his landlord. I should like at to be understood—that while we, I am sure all us, sympathise immensely with the conditions under ich the poor people earn their livelihood, our wers are limited to general recommendations of at is best to deal generally with the great troubles the district.

48591. Mr. Sutherland.—And with that view, rhaps Sir Francis would allow me to put a general estion with regard to the development of the heries in Achill Island. I think, in regard to a estion of policy, you said it was quite impossible at there should be a development of fisheries in chill?—Yes.

48592. For several reasons into which we need not ter just now. Now one of the necessities for a hery is a railway?—Yes.

48593. A railway has been made to Achill Sound?— es.

48594. At considerable expense, and it has been in istence now for how many years?—Since 1892.

48595. Can you say, of your own knowledge, that e formation of that railway, and its existence since 92 have tended to develop an increase of fishing in chill?—Well, I am afraid is has not much, for this ason, that the people are greatly given to migratory bour, and that when the mackerel fishing ceases, bout the beginning of June, as a general rule they igrate from the county. They have not proper oats or nets for deep sea fishing, and the coast is ery rough, and the coast fishing is not a great success.

48596. And you are aware that before the railway as made they stated, and I suppose it was generally nd conscientiously believed, that the formation of he railway would develop the fishery?—It was.

48597. And do you think that that anticipation has een fulfilled?—Well, it has not been fulfilled as much s it ought to have been.

48598. Then you say that in order to get the result hat was anticipated fresh expenditure in the making f loans for boats would be required?—I think it would, and for the building of at least one or two piers.

48599. And do you think that if that were now done there would then be a demand for something else. They must begin to work the fishery at some point?—Yes.

48600. Have they?—No; because the people are very poor, and they have no good boats.

48601. From the statement that the Chairman has made, it is necessary that we should have a general impression as to whether an expenditure of money would tend to develop the fishery?—I am certain it would.

48602. Sir Francis Mowatt.—Where is Roigh Harbour?—Within three miles of Newport.

48603. Sir John Colomb.—With regard to your answer to Mr. Sutherland's question, is there a plentiful supply of lobsters?—There is.

48604. Is it thoroughly fished?—No, sir, it is not.

48604A. And you will admit that the pursuit of the lobster industry does not require capital or big boats, but it is a small boat business?—Yes.

48605. Now, has the railway increased the lobster business?—I think it has.

48606. Very considerably?—Very considerably.

48607. Do you consider that a large portion of the population are engaged in lobster fishing and making a profit of it?—Not a large portion, but a few. It requires experience.

48608. How is it that on the island of Iniskea, where we were on Saturday, the people are making a good thing of lobster fishing, and they go to Achill and catch lobsters there, and why is it that the people of Achill do not pursue that industry with the same success or effort as the islanders of Inniskea?—I will tell you. The island of Inniskea, as well as Blacksod generally, is much better for lobster fishing than around Achill. The coast is so much exposed round Achill here that it is not as fit for lobster fishing. I have seen a lot of lobsters taken in this morning, perhaps about a ton of lobsters, from some of those boxes out of the sea, but the most of these were from Blacksod Bay. They are not taken about Achill except in small numbers.

48609. Do you think that the Blacksod people take their lobsters here to send them away?—I do.

48610. And therefore the people who are remote from Achill, or at some distance, are benefiting by the railway more, and taking greater advantage of it, than the people of Achill itself?—Yes; as far as regards lobsters.

48611. I am confining myself to the lobster fishery because it does not require capital or big boats?—No, sir.

48612. It lies within the province and power of the people?—Yes, sir.

48613. And I want to know, when it is so remunerative to an island some miles off, why it is not equally remunerative to the people in the place?—Because the island of Inniskea is much better for lobster fishing. The lobsters can be got in greater numbers than round Achill. Around Achill is not good for lobster fishing at all.

48614. I was speaking to two men who made about £48 this season, and when I asked them the district in which they had caught the lobsters I found they had not been in Blacksod Bay at all, but outside, in the roughest water and on the roughest coast. They also told me that they caught them off Achill; and I want to know why the Achill people, with lobsters at their doors, are not as energetic in developing the lobster fishing as the people of the island?—I know hundreds have tried the lobster fishing and they could not get the lobsters in such numbers as the people of Inniskea and other places. And besides, it is an expert industry, and I do not think the people of Achill are very well trained in the lobster fishing.

48615. What I want to get at is this. Do you suppose that if there was a determined attempt made to take them in hand and instruct them in the business of lobster fishing they would be more active and energetic?—They would. But there is another industry.

48616. I confine myself to an industry that requires no capital, and simply depends on the hardihood and persistence of the individual.

48617. Sir Francis Mowatt.—Have you any other point?—I think that the Congested Districts Board should be made more representative, and that some of its members should be elected from public bodies such as the County, or district, or Urban Councils, with compulsory powers for acquiring land for the relief of congestion. That would do a great deal of good. They are looked on as rather a non-representative body, and a body of men that live away, mostly in Dublin, do not exactly study and know the wants of the country.

48618. But surely the County Council would?—They would.

48619. How many members would you suggest?—I think each county should have at least three or four members.

48620. Three or four?—Three or four.

48621. These are of distinct counties, and that would make a very large board?—It would, but they would require it to represent the people accurately.

48622. Sir John Colomb.—There are three electoral divisions in Achill Island?—I believe so.

48623. The electoral divisions of Achill, Duagh, and Slievemore?—Oh, yes.

48624. Who are the gentlemen representing those divisions on the Rural District Council?—Well, Mr. Lavelle was the principal one, but he is at present in Dundrum Lunatic Asylum.

48625. Any other?—I forget the other two. I have a few more points.

Aug. 26, 1907.

Mr. John M'Hale.

48626. Mr. O'Kelly.—Before you go any further, I would like to ask you if you had three or four members from each county would not the result be an unwieldy and unworkable board?—I think not, because really only one or two of those gentlemen would attend the meetings generally. I think there would be three or four required from each county.

48627. Sir Francis Mowatt.—Have you any practical knowledge of the difficulty or disadvantage of having three or four members for a place only one or two of whom would attend—that you do not get any consecutive knowledge or consecutive discussion of plans, whereas if you have only one or, at the outside, two, both of whom attend, you get any project under discussion carefully considered and consistently considered?—Quite so, sir. I believe you are right in that, but in any case I believe it would be an improvement if we had even two from each county.

48628. I am not questioning the advantage of representation, but only the number of representatives that would give a regular attendance?—What I wish to see is that the wants of the people should be accurately represented, wherever the Board held its meetings.

48629. Most Rev. Dr. O'Donnell.—Your idea, I take it, is that men would be required on the Congested Districts Board who would know the wants of each locality?—Quite so.

48630. Mr. O'Kelly.—Who in your opinion should be the authority nominating those members?—I think the Chairman of each County Council.

48631. Do you mean to say that the County Council should nominate themselves?—I think so.

48632. Do you not think that the re-election of those men as members of the Board would entirely depend on what success they had attained in securing results for their particular districts?—Quite so.

48633. And that being so, suppose that those members failed to secure advantages to the county, do you not think that at the next election they would not be appointed?—I think the County Council would select other men in their place the next time the election came round.

48634. There would be no continuity of policy there, you see?—I think there would not, but I think it would be necessary to have a man to devote a good deal of time to the wants of his people, and I believe if a man failed in his duty the County Council, if it had the power of election, should have the power of putting a man in his place.

48635. Sir John Colomb.—But the question the Congested Districts Board have to deal with is the question of relief of congestion all over Ireland, and the result would be that if a man did not get enough of money for his district he would be turned out?—Well, no doubt, that might be.

48636. And Ireland would suffer in consequence?—We have a fine example in regard to Donegal.

48637. Mr. Sutherland.—We have been hearing in various parts of the country that the whole attention of the Board was given to Mayo and Donegal over the rest of the country?—I do not think that is the fact, but things are better done than in places which are not represented. There is another thing about the value of land and the purchase of land. The Act of 1903 has irretrievably failed within this union to effect any good for the tenants owing to the exorbitant demands of the landlords in the matter of prices. Before the passing of the Act of 1903 most of the landlords were willing to sell to their tenants under the Ashbourne Act at prices which compared with the present time were reasonable. The following offers were made previous to 1903 to sell under the Ashbourne Act, although there was no bonus or anything else to induce them:—Colonel C. H. Knox, Creagh, Ballinrobe, offered to sell portion of his estate to his tenants at eighteen years' purchase.

48638. Sir John Colomb.—Is this in your union?—Yes. The Marquis of Sligo offered to sell 10,000 acres of his estate—one-third of the estate—at 18 years' purchase. Mrs. M. A. T. O'Donel, Newport House, through Mr. O'Donel, her husband, offered to sell at 16 years' purchase. The representatives of the late N. P. Symes offered to sell at 12 years' purchase. The late Victor C. Kennedy (the estate is now in possession of Mr. Jones) offered to sell at 13 years' purchase.

48639. Sir Francis Mowatt.—None of those offers were accepted by the tenants?—The Symes Estate was sold, but it was bought up by a Mr. Staniel, from Dublin, and it was not sold to the tenants. The tenants considered the price very high, as the prices of agricultural produce have gone down enormously within the last ten years. And the M'Donnell Estate in Kilmeena has been sold at 16 years' purchase.

48640. Under the Ashbourne Act?—Yes.

48641. Mr. O'Kelly.—What was the opinion of the tenants as to the price asked by the Marquis of Sligo?—They thought eighteen years' purchase too high at the time, and they called on the Congested Districts Board and the Congested Districts Board sent down an inspector to value the estate, and the Congested Districts Board only offered sixteen years' purchase, and the sale fell through.

48642. Did the Congested Districts Board offer sixteen years' purchase?—Yes; that was before the passing of the Act of 1903.

48643. Have there been negotiations carried on between the present owner of the property and the tenants since the Act of 1903 was passed?—There were some negotiations, but they were making inquiries. I do not think he would sell now at less than 24½ years' purchase.

48644. On what do you base that statement?—Simply on this, that the Rural District Council offered to send a deputation, but he would not receive the deputation, and he said that at present he would not sell till he would see further, and that there were a lot of mortgages claiming on it.

48645. But as a matter of fact he did not ask any price?—No, but it is rumoured that he would want to sell within the zones for 24½ years' purchase. And, finally, I think the only method of settling the Land Question in the West of Ireland is by compulsory purchase and by Parliament passing an Act that will compel a landlord to sell at a reasonable price.

48646. Sir Francis Mowatt.—That is that he should get his net income derived from the estate calculated on an average of a period of years?—I think eighteen years' purchase would bring any landlord more than his net income.

48647. I do not want to bring him more than his net income, but in considering how you would deal with a large affair of that sort, would you say that the net income of the landlord, after deducting the usual outgoings, would be a fair measure of the price he should be paid?—Yes, I accept that.

48648. Mr. Kavanagh.—Just one question before you go. You have just stated now that the prices of agricultural produce have gone down within the last few years?—Yes, sir.

48649. Are you aware that statistics are against your opinion, and that they have all gone up?—I am not aware, but the reason I state that is that I remember I was cashier in a large milling concern in Newport, and at that time, twenty years ago, we used to buy 1,400 to 1,500 tons of oats each year, at an average of 7*s.* 6*d.* a cwt.—from 7*s.* 5*d.* to 7*s.* 6*d.* At present oats fetch in the market about 5*s.* 3*d.* It is sold in Newport at 4*s.* 10*d.*, and from 7*s.* 6*d.* to 4*s.* 10*d.* is a great fall, and then the potato crop for the last two or three years has been entirely lost altogether, and I am afraid this year there will be no crop at all. It is not worth noticing.

48650. Sir Francis Mowatt.—That does not reduce the price of potatoes, but rather increases it?—But then you have nothing to sell, and the only thing that might pay the tenant farmer is cattle rearing, and such is the state of congestion that is to be found in the Westport Union that if you handed over the lands into their possession, most of them free of rent at present, and make peasant proprietors of them, they would not be able to live on the small holdings.

48651. Sir John Colomb.—Do you mean the average holding in the union?—Yes.

48652. What is your idea when you say a man could not live on it though he had no rent to pay. What is the average valuation roughly?—About £2 or £2 10*s.* a holding. There are cases in fact on the Stoney property where holdings are rated at only 14*s.* 6*d.*, and it is impossible to live on those holdings.

Mr. John Walsh examined.

3653. Sir Francis Mowatt.—You represent the ...o County Council?—I do.

2654. Are you yourself a farmer?—No, I am not a ...ner. I do a little on a small holding.

3655. What is your occupation or trade?—I am a ...pkeeper in Westport.

8656. Sir John Colomb.—Have you also got a ...nce?—I have, sir. This is what I just want to ... before you, and I will be brief in putting the ...le thing before you. It is as well that I should ... you that I am chairman of the Westport Board of ...ardians. Westport Union, though called congested, ...in reality sparsely populated. The Land Acts ...duced no great improvement in the condition of ... agricultural population, as the landlords had ...ctically cleared the tillers of the soil off all the ...d land before those Acts were passed, and the ...lings of the great majority of the people produce ...economic rent. That is to say, the results of their ...r's work left no margin after they provided them...es with the bare necessaries of life. In most ...tances the necessaries of life and rent were received ... great part from the earnings of relatives in ...gland, Scotland, or America. The operations of ... Congested Districts Board are good, but too slow, ...d they do not seem able to provide holdings for ...ng people, whose energies would be extended on ...h holdings to the betterment of the country as a ...ole.

48657. Sir Francis Mowatt.—When you say ...oung people" do you mean young holders?—I mean ...s of tenant farmers.

8658. Who do not at present have holdings at all? ...Who have not at present holdings at all.

8659. They are working on their fathers' holdings? ... mean small tenant farmers having three or four ...s; and I say that where one of those sons is able ...take up a holding the Congested Districts Board ...uld see that these people should get the land if ...re is land to supply them with, instead of their ...ng away to other countries.

8660. You see that is not a method of reducing, ... I am sure rather of increasing congestion, and ...ling to the number of people you put upon the ...d when there is not enough land for those at pre...t in occupation. It may be of great advantage in ... way, but it is not a method of relieving conges...n?—I can show you that there is sufficient land in ... union.

8661. You must deal with Ireland?—But I am ...ling with my own union.

8662. Most Rev. Dr. O'Donnell.—Which do you ...t first—the enlargement of holdings which are not ...nomic holdings now, or providing for the sons of ...ants?—Those that have not sufficient holdings now.

8663. Would you look upon those who at present ...ve holdings of an uneconomic kind as having the ...st claim on any land that may be made available ...enlarge their holdings?—I think so. The normal ...dition of the farmers in the union, even in ...irly good years, is one of poverty, which in a bad ...ar drops to a condition of at least half starva...n. The first essential remedy is to place agricul...ists on the good lands, giving them in their new ...dings the charm of ownership of the land they cul...ate. The question of a market for the crops they ...oduce would not arise, because in their new condi...ns the animals kept by them—sheep, cattle, and ...gs, would consume those crops, and animals so fed ...uld, in the open markets, always fetch prices ...ich could not be beaten by the grass-fed importa...ns from other countries. In their visits to the ...eral districts of the Union I would direct the ...cial attention of the Commissioners to the enor...us extent of waste lands now worthless and yield...g no profit to the country. The lands now arable ...re once as those dreary wastes now are. I suggest ...at those wastes should be compulsorily acquired by ... Government, and, through companies or other..., reclaimed into arable land, to be given to the ...ople as peasant proprietors. This was recom...ended by the Devon Commission in 1845, and by ...lect Committees of the House of Commons from ...10 down to the time of the Devon Commission.

48664. Sir Francis Mowatt.—You do not mean "waste lands" the grass lands?—If it is waste ...nd.

48665. Sir John Colomb.—Have you in your mind the enormous tract of waste land, the enormous extent of bog we came through, coming from Belmullet here—is that what you call waste land?—Yes. The work of reclamation would keep the labourers and small farmers of Ireland profitably occupied for the next quarter of a century, and provide a permanent means of existence for at least three times the present agricultural population. Having regard to the importance of agriculture over pasture, I suggest that agriculturists should have the right to serve notice claiming the land used for pasture for the more important industry of agriculture, and that the Land Commission should have the power to stake out from grazing ranches so much land as the claimants could farm as agricultural holdings. If that were the law many young boys and girls who have now to emigrate would be provided with holdings, and a thriving peasantry would be the result. Westport Union lies along almost forty miles of seaboard, but from the want of proper piers—which renders the use of suitable large boats impossible—the fishing industry is not worked to advantage, or on such a scale as would yield even a sufficiency of fish for the purposes of the people along the coast, whose winter condiment is, in great part, made up of inferior Scotch herrings. I would call the special attention of the Commissioners to the condition of those poor fisherman along the western seaboard. There is a rich harvest at their very door, but for the want of safe piers and harbours they are unable to avail themselves of it. In one place only five boats can lie along in full water; otherwise the five boats must range out along, and they are liable to be broken and smashed. And they can only fish at certain seasons. In certain seasons they cannot fish at all. And in Clare Island, to show you the necessity of making some improvement in the pier of Clare Island, three years ago we sent seed potatoes from the union into Clare Island, and we sent a boat with the potatoes, and the boat went within a hundred yards of the pier. The sea was so rough that the boat had to come back again eighteen miles, into Innislyon, and anchor there; and when she went back again, after three or four days, the only way they had to take the potatoes from the boat was for the people to wade out into the water thirty or forty yards and then to take them with their hands. And in that way they succeeded in delivering the potatoes to the poor people of Clare Island.

48666. Most Rev. Dr. O'Donnell.—Have you a personal acquaintance with the condition of things in Clare Island?—Well, I have not much, really.

48667. Is the condition of the people very much improved there?—Oh, yes; very much since the Congested Districts Board got it.

48668. Is the situation improved?—I think so.

48669. How do those men send their stock to the mainland?—They bring them out in one of the Congested Districts Board's steamers.

48670. Will there be anyone from Clare Island to give evidence to-day?—I think not.

48671. Sir Francis Mowatt.—How do they get stores on or off the steamer now. Do they go alongside the pier?—They cannot, except at certain times.

48672. High water?—High water.

48673. Mr. Sutherland.—Are you acquainted with the conditions under which the fishing is carried on, say in Scotland?—Well, I am not.

48674. Do you know that the process that you have described just now, of wading, is gone through there in carrying the fish?—But this was potatoes.

48675. But it is a still worse case than you mentioned, because they do it every day?—In fact they cannot fish for the want of a pier.

48676. But I am pointing out that in Scotland, where the fishing is very successful, fishermen have to do that wading, for example, every day?— But here the poor people have no proper piers.

48677. Allow me to assure you that they have far more of them, and far better ones than in Scotland?—There is only one other point I have to show you, the amount of waste land we have in this Union, and the valuation of the places in the hands of

Aug. 26, 1907.

Mr. John Walsh

graziers. A report was made by a Committee of the Westport District Council appointed to inquire into the condition of the congested districts in the union. It was presented to the Westport District Council on the 11th of September, 1902, and I was Chairman of that Committee.

48678. Mr. SUTHERLAND.—Is that the report Mr. M'Hale referred to?—It is, and I just want to show you the amount of grass farms in the union and show that there is ample room to relieve the congestion I mention.

48679. Sir JOHN COLOMB.—I suppose all the grazing lands are in Mr. Ginnell's return?—I do not know.

48680. Because all those figures we have got in the statistics?—But would not it be well to put before you the condition of our union so that the public should know all about it?

Mr. SUTHERLAND.—We have it in the Blue Book, and we have had it already from Mr. M'Hale.

48682. Sir FRANCIS MOWATT.—I understand that it is the last point that the witness wishes to make?—The Union of Westport has a population of 37,381 and a valuation of £43,961, being at the rate of little over £1 per individual. Its superficial area comprises 347,819 acres, making almost ten acres per individual or fifty acres per family. Of a total of 5,322 rated occupiers in the union, 3,041 are under £4 valuation, and 1,048 more rated from £4 to £8—making in all 4,089 occupiers rated at or under £8. These figures have been carefully collected by the Acting Clerk of the Council from the rate books. Of the remaining 1,233 occupiers, in the union at least, 500 more are barely removed by one degree of poverty above their 4,089 neighbours. We confined ourselves to a figure (£8), at or below which there could remain no possibility of controversy that the holdings are below subsistence point. Thus the principal fact to be remembered in connection with the extent of the problem in this union is that there are 4,089 out of 5,322 families, say 20,000 individuals, whose holdings are obviously incapable of affording them subsistence, and who are only preserved from year to year from perishing of famine by the earnings of the adult male population in their annual migration to England and Scotland, and by the remittances of their relatives in America. Two special trains per week are despatched from Westport during the season with small farmers setting out to work as labourers on the farms and in the ironworks and mines of England; there are also two sailings per week from Westport to Glasgow and Liverpool, by which the migratory labourers, male and female, are conveyed for 5*s.* per head, and the population is further depleted by two special trains per week of emigrants proceeding to America by Queenstown, the latter being almost exclusively young people from fifteen to thirty-five, in the flower of their age and strength. From Westport alone there left in the season of 1901, 2,468 harvesters for England and 1,710 for Scotland. The total emigration from the county since 1851 has been 164,589; and from this union alone the emigration exceeded 30,000, which is not far from the figure of the entire present population.

48683. Sir JOHN COLOMB.—That is in fifty-six years?—Yes.

48684. Sir FRANCIS MOWATT.—In using the word "emigration," you do not mean to England and Scotland, but to America?—To America. The consequence of this two-fold drain is that for six months of the year the small holdings are deprived of the care of almost the whole of the male agricultural population, with the result that their tillage plots, already worn out by the necessity for raising the same crops without any proper rotation in the same ground for generations, are becoming more and more incapable of proper cultivation. Under these unfavourable conditions potatoes, their staple crop, and with the exception of their earnings in Britain, their only resource against starvation, only yielded an average of 2·8*s.* ton per acre in 1900, as against a yield of 6·05 tons per acre in England. We have only been preserved for the last few years from a repetition of the disastrous potato famines of 1879, 1882, 1886, 1890, 1894, and 1897 by the invention of the Bordelaise spraying mixture, which, however, involves an addition to the cost of cultivation that in many cases absorbs the reductions of rent obtained by the small holders in the Land Courts. The normal conditions, therefore, of the life of 20,000 of the population of this union are: holdings too small an too exhausted to support life, soil yearly becomir more unfit for cultivation, three-fourths of the adu male population banished from their families an country for half the year in search of the hard and most poorly recompensed labour, and a consta liability to have the ordinary privations of eve winter turned into actual and general famine by few weeks' unfavourable atmospheric conditions i July or August in an unreliable climate, by a fallir off in the English labour market, or by any serio depression of American trade which would cut o their relatives' power of relieving them. The oth main fact to be borne in mind is that this conditio of universal penury, decay and expatriation f want of land occurs in a county containing an are of 1,327,000 acres, of which only 93,681 acres wer in 1901, employed in the cultivation of cereals green crops, while 644,463 acres were devoted to d pasturing cattle. Although this union does not co tain as extensive tracts of the primest evicted lan as adjoining unions, such as Castlebar, Claremorri Ballinrobe, and Killala, while it contains a dens population of persons dispossessed from the mo fertile districts, it will be seen from carefully con piled returns, which are set out below, that onl 15,000 of the 347,000 acres in the Westport Unio are used in raising food for the people, and tha even within the confines of this union we have bee able to point to 150,935 acres, chiefly evicted lan which are monopolised by a few dozen graziers, an which would ensure a comfortable livelihood to thric the population who are now dragging out their liv in the poorest overcrowded tillage plots. Then I hav a statement showing the names of graziers and nun ber of acres held by them in the district. If yo wish, I will give you these.

48685. We have these?—There is one point I wis to call your attention to, to show you the amount land held by landlords in the district. The Marqu of Sligo, 27,402 acres; the Earl of Lucan, 382; S Roger Palmer, 218; W. C. Kennedy, London, 3,43 R. V. Stoney, 4,223; Thomas O'Donel, 2,495; Mr Clive, Ballycroy, 288; Bellingham, 8,955; Patric O'Dowd, 305; Mary Pike, 1,533; Agnes M'Donnel 1,530; F. C. Garvey, Murrisk, 284; Gibbings, 1,09 All that is land held in the possession of landlords.

48686. But these lands you are referring to i clude bog and rough mountain?—Yes.

48687. Mr. KAVANAGH.—Untenanted land?—U tenanted land. And I will give you a list of th amount of land held by several graziers to show yo we have sufficient land in the union to relieve conge tion and supply the majority of the young people i our union with sufficient land.

48688. Sir JOHN COLOMB.—Do you exclude or i clude rough mountain and bog?—There is some roug mountain and bog on them. Of course rough mou tain generally goes along with good land in son cases. You are well aware of that.

48689. Is the proportion of the rough mountai and bog in this district infinitely greater than th proportion of arable land? Would you kindly answe my question? I ask you this general question as yo know the district so well. Is not in this Westpor Union the greater part of the land, taking the whol land, rough mountain and bog?—Oh, it is not. Ther is very little bog, and I can tell you that it is ver seldom you will ever see a grazier in the distric confine himself to rough mountain and bog. If h has any land at all, sir, he has the pick of th arable land in the district.

48690. Most Rev. Dr. O'DONNELL.—I do not thin you are quite answering the question that Sir Joh Colomb asked you to answer. He wishes you to dis criminate between rough mountain grazing or moo land, on the one hand, and arable land and gras land held by graziers on the other. And are yo able to tell Sir John how they stand in proportion Is there much of the good class of land as compare with the mountain land?—Well, there is more of th rough class of land than of the arable land; bu about Newport and Westport there is a great deal o good land. I will just point out to you all the goo land which is scheduled:—Robert Gibbons, Westport 221 acres; W. Horkan, Westport, 374; Exhar Moroney, Belcarra, 734; Hawkshaw, Ayle, 315 W. P. O'Malley, Louisburgh, 353; A. H. Boswel London, 24,763 acres of land. This is a mountain principally grass, but still there is good arable lan

and there through the district. In Durma district, about Louisburgh, there is good arable land, ...e as good as you could get about the town of ...stport. Then there is Lady Wilbraham, 572 ...s; Patrick Joyce, 262; A. M. O'Malley, 286; ...ert Powell, Westport, 106; Thomas F. Joyce, ...erass, 2,373; Patrick Fahey, Glenisland, 1,194; ...es Hawkshaw, Westport, 81; Edward King, ...stport, 134; Thos. Bourke, Clogher, 306; James ...ion, Belclare, 65; Frank Mulholland, 429; ...tain Laprimandaye, London, 10,064.

8691. Sir John Colomb.—Do you mean that the ...ater portion of the 10,064 acres in the hands of ...s gentleman is mostly arable land?—I could not ... certainly.

8692. But is it, for you stated that you would now ...e us the figures of the arable and cultivated land? ... told you I would give you the amount of land held ... those several graziers in the Westport Union, and ...ay tell you it is very easy to see that the graziers ...e good land, because in the past the graziers always ... the pick of the land, unfortunately, because the ...r people were driven to the bogs and moors to make ...m for the grazier.

8693. Sir Francis Mowatt.—What we want ...get at now is what is the amount of really good ...sture and arable land which is available. What...r may be the causes, putting them aside for the ...ment, we wanted to get from you, as I understand, ...w much land there was available for additions to holdings, which would be good arable land or good feeding land?—Well, this whole list contains it. Of course there is some coarse land in it which you will always find in every district, but the majority is arable land.

48694. Most Rev. Dr. O'Donnell.—If you had the valuation with the acreage in each case it would be a means of testing it?—Well, I have not the valuations here. I have only the valuation of the whole thing.

Mr. Sutherland.—We have all the information about the valuation and everything.

48696. Sir Francis Mowatt.—We shall check this by referring to the valuation. Where we find the valuation high we know it is good land, and where it is low it is poor land. Does that conclude what you have to say?—I only wish to say that unless there are compulsory powers brought in by the Government to compel those landlords in the district to sell their lands some of those landlords will hold out and they will not sell their lands, and the poor people must live on as they have been doing in the past.

That is a point that has been pressed on us by a good many witnesses.

48698. Mr. Sutherland.—You have heard the statement of Mr. M'Hale with regard to the untenanted land in this union?—I was not present at the whole of it.

48699. Do you agree with what you heard of it, that it was correct?—I do.

Very Rev. Canon Grealy examined.

Very Rev. Canon Grealy.

48700. Sir Francis Mowatt.—The Commission have ...d a very full detail of the points of the evidence ...u propose to give, and the witnesses you have heard ...o preceded you have gone more fully into the same ...ject on which you are going to speak. As we are ...xious, if possible, to find time this afternoon to ... ve over to see some of the Achill lands, would it ...et your views if I asked you questions on each of ...e points which you have raised, and if you think ...at I have omitted anything we shall be much obliged ... you if you call our attention to it?—Very well.

48701. You commence with the value of Newport ...est. I do not think that the exact figures need be ...ven because we know them. Then you say "the ...ass ranches in this division and held by a few per...ns exceed in value by £165 12*s.* all the land and ...ner hereditaments held by 260 tenants. There is ...ver a sod turned on these grass lands, or a day's ...ployment given to the men of the district, who ...ve to go as migratory labourers to other countries, ...cept perhaps here and there at a vegetable garden, ...d the lands are fast deteriorating for want of culti...tion"?—Yes.

48702. That is sufficient for what you have given ... on that particular point?—Yes.

48703. I take the same course with regard to New...rt East. There again you give the detailed ...luation, which we have also got, and you proceed to ...ate that the division is valued at £786 15*s.* "The ...ass ranches held in this division by a few persons ...ceed in value by £313 14*s.* all the land and other ...purtenances held by 195 tenants. There is no ...ltivation of these vast tracts of land. The land ... going to the bad year by year for want of drainage, ...c., and in this way the lands of agricultural tenants ...re flooded and made unfit for cropping. There is ...ot even a vegetable garden cultivated in most of ...ese large tracts of the best land in the district. All ...e young men go as migratory labourers to England ...nd Scotland in order to procure the bare necessaries ... life for their parents and brothers and sisters. ...Were it not for the money earned in other countries ...ne people could not live on the produce of the land, ...y the most persevering industry, one half the year. ...or the benefit of the nation every man holding large ...racts of land should be compelled by law to keep a ...roportion of it in tillage, and all of it from de...erioration. The land belongs to the nation." Do ...ou desire to add anything to that?—No, no.

48704. I adopt the same plan with regard to other ...lectoral divisions. I am only putting it in a way ...hat would be shorter for all of us?—Yes.

48705. Again, you give the figures of the Shramore ...Electoral Division, and you state—"No agricultural tenant in this district valued as high as £10. The grass ranches in this division exceed in value all the lands, etc., of the agricultural tenants by £315 6*s.* The same remarks as to cultivation and deterioration apply to this division that I have made regarding Newport East and West. Captain Laprimandaye, J.P., a most humane and charitable gentleman, who resides in London, holds under lease from the Marquis of Sligo, Westport House, County Mayo, 11,360 acres, valued at £410 7*s.*, in this electoral division. It is over twenty years since the Captain called on me and stated that it pained him much to see the poverty of Lettermoghera tenants (forty in number), whose valuation is only £60, who formerly owned a large portion of his farm, from which they were capriciously evicted without owing as much as one shilling to the noble marquis, in order to make a game park for a young scion of the Browne family, and that he wished to give over a portion of his farm to those poor people to enlarge their holdings, and thereby give them an opportunity of living, and of rearing and educating their children—that he would give the land without one penny compensation, and at the rent which he paid for it to the Marquis. Eighteen years ago the tenants of Shramore (Mr. Simes' representatives being vendors) bargained for the purchase of their holdings at ten years' purchase of the valuation. I personally arranged the terms. The Marquis of Sligo had a small head rent on the estate, and refused to sell his interest. Therefore the Land Commissioners could advance no money to the tenants. The sale to the tenants fell through, and a Mr. Stanuell, Dublin, bought the estate very cheap. As a result of our interview, Captain Laprimandaye and I wrote several letters to the Marquis requesting his consent to this arrangement. He absolutely refused even after we guaranteed him the rent annually. When the Congested Districts Board come into existence Captain Laprimandaye immediately asked them to buy his interest in this immense territory for the relief of the congested villages that surrounded it on all sides, but the Marquis again proved an insuperable obstacle to the benevolent project. For the last fifteen years the Captain and I kept pegging away incessantly for the purchase of this immense farm for distribution amongst the tenants; but there is a marquis, an implacable "dog in the manger," still, who would lose nothing and could gain much in the transaction. If English statesmen are true to their professions, they will have no hesitation in applying compulsion to this and such cases." Compulsion means there of course the power of compulsorily acquiring this land?—The power of compulsorily acquiring this land.

Aug. 26, 1907.

Very Rev. Canon Grealy.

48707. Then you say: "I have, without interruption, resided as a missionary priest in the Unions of Westport and Clifden since 1871. I have known every village and hamlet from the town of Belmullet to the city of Galway, and I have no hesitation in stating that there is not along the coast line of the two counties a poorer, a more congested, or a more neglected and inaccessible electoral division than Shramore. It is in need of roads, bridges, and drainage. Neither the Local Government Board, the Public Works Board, the Congested Districts Board nor the Education Board have done anything for it. Even in a year of acute distress, when other impoverished districts can get relief, there is some insuperable barrier to the relief of this unfortunate place." I think I need hardly read further, unless you wish to give any particular evidence?—No. In these two cases—I speak with knowledge now—the tenants of Shramore bargained for their land for ten years' purchase.

48708. What date was that?—1888.

48709. And it failed owing to the opposition?—Of the Marquis of Sligo. He had the head-rent, and he would not dispose of this, and the Land Commission could advance no money. Mr. Stanuell, of Dublin, bought the lands.

48710. Sir JOHN COLOMB.—Do I understand that in this case of Shramore the middleman agreed with his tenants to sell?—Yes. At that time Mr. Simes was the landlord, and his representative bargained to sell the land.

48711. With the tenants?—With the tenants. I made the bargain.

48712. You made the bargain?—Yes.

48713. And the landlord would not agree to sell?—Yes.

48714. You say the Marquis of Sligo had a small head rent on the estate and refused to sell the estate?—Refused to sell the estate.

48715. But that cannot be now?—This Act of 1903 was several years after that. This was in 1888.

48716. This was under the Ashbourne Act?—The Ashbourne Act, 1888; and they could not compel the Marquis to sell, and the Land Commission could advance no money as long as another had a prior claim.

48717. Yes, I see that; that it was eighteen years ago, under the Ashbourne Act. But that cannot be now. The Marquis of Sligo cannot now, if he is the head landlord, and there is a middleman, and the middleman agrees with the tenants to sell, object, as the law stands now?—Yes.

48718. That is all I wanted to make clear?—Yes; but even now the Captain is a leaseholder; he has 11,000 acres from the Marquis of Sligo, and for over twenty years he tried to dispose of his interest in it, and I have written several times to the Marquis of Sligo.

48719. Sir FRANCIS MOWATT.—Since 1903?—Not since 1903. And since 1903 Captain Laprimandaye has communicated with the Congested Districts Board, and since 1903 Lord Sligo has refused to dispose of his interest. The reason assigned is this, that he says he is embarrassed and has not his affairs arranged, and he is not in possession of the property more than five or six years, since Lord John Browne—who was Marquis of Sligo—died, five or six years ago, and the present Marquis came in for the estate; and he says that the estate is embarrassed, and that he is not prepared for a sale, and that he has co-trustees to consult, and a lot of things like that; but at all events he is not disposed to sell the land, nor are any of the Mayo landlords and the great territorialists.

48720. Mr. SUTHERLAND.—But that is one of the cases that would justify compulsion?—I believe, sir, there is not a case in Ireland where it is more needed. The Marquis of Sligo has there, as I have stated, in that electoral division, eighty tenants, and the average valuation is £2 5*s*. And the Marquis of Sligo, in the Lettermoghera townland, has forty tenants, and their valuation is only £60, taking in houses, buildings, and everything, so that I think if you take the land alone, excluding their little houses, it would be about £1 each; and a man from that village came to our Parish Committee last year for assistance to rebuild a portion of his house that fell down, and we asked him what was his valuation, because we could not give anything to a person above a certain valuation, and he said his valuation was only 10*s*. "And how much land have you?" we asked. "Well, I have about an acre," he said "and I have to go to fourteen different places for that acre." We came to the conclusion that it was not worth expending money on. And you have there forty tenants on £60 worth of land, and you have this ranch of Captain Laprimandaye with 11,000 acres alongside of it, from which they were driven out in the early fifties to make a game park. You asked Mr. Walsh about the 11,000 acres, what was the amount of arable land. There are about a thousand acres of it arable land, the remainder of it mountain. And it is splendid pasture; there is no better mountain pasture than it in the province; excellent pasture.

48721. Most Rev. Dr. O'DONNELL.—Where is that situated?—Three miles north of Newport, between Newport and Crossmolina.

48722. Is it in the same electoral division? Yes, the very same. The Marquis of Sligo has another village, Furnace, there alongside of Lettermoghera, and the holdings are valued at £2 each.

48723. Sir FRANCIS MOWATT.—Then, to adopt the same plan with regard to Newport parish generally, you say: "The native population was cleared out in the most cruel and systematic way, as any person can see by a careful survey of the district. First, the people were driven from all the good land; second, from all the dry mountain land where cattle and sheep could live and browse. There are ten or twelve miles of mountain in one unbroken range from Mulranny to Nephin Mountain, for the most part fine pasture, all held by graziers to the exclusion of the native population, the rightful owners, who formerly occupied and had the benefit of it. Third, the islands of Clew Bay, fine land, producing a rich crop of sea-weed." I must say that to an Englishman that does not give a good idea of fine land, "producing a rich crop of sea-weed"?—It is on the foreshore, and the landlord claims it, of course.

48724. "The islands of Clew Bay, fine land, producing a rich crop of sea-weed, a most productive and fertilising manure, were taken from the natives, who enjoyed them for generations, and handed over to strangers, not a perch of them under cultivation"?—There is not better land in the union than the islands include.

48725. Then you say: "They are forty-two in number, the valuation £450 10*s*. The present native population (to use a common though not a becoming phrase) are placed between 'the devil and the deep sea.'" The deep sea we know, and the other gentleman is probably an allusion to the landlord?—Oh, I do not state that, but I state the fact. The people were driven into the marsh and bog and mountain. All the good land along there was taken from the people and they were driven into the marsh.

48726. Mr. SUTHERLAND.—Were those islands at one time inhabited, Canon?—A great many of them were. They were all cultivated in certain portions, and there are the ridges still there.

48727. What are they now devoted to?—Grazing.

48728. It must be troublesome to carry the cattle?—No; you can get into most of those islands at low tide.

48729. There seems to be an interminable number of them?—Yes, and they are so near the shore that it is very easy to tie a beast to the boat and draw it on to the island.

48730. Would they be suitable for the enlargement of holdings?—I would not recommend people to live there, but they would be splendid for the enlargement of holdings on the mainland.

48731. Sir FRANCIS MOWATT.—Then you say: "They are driven into the marshes, cutaway bogs, and boulders to eke out a most miserable existence by the most desperate toil and industry or die of disease and hunger. Formerly flax, oats, and wheat were grown extensively in this parish. Now there is no wheat or flax grown. The tenants' lands are not suitable for such crops, as they are too inferior. Formerly 2,000 tons of oats were exported from Newport quay annually, after keeping as much as supplied the native population with abundance of meal—a most nutritive food and suitable to the climate. Instead of that I saw oats frequently imported from Glasgow in the last twenty years for feeding the horses kept in the district, and there is not a horse possessed in one out of every twenty houses in the parish. The people are not able to keep a horse on the miserable patches of land they possess. As to making meal of oats now, such an idea never enters any householder's head. The land they have is not

to grow or ripen oats for making meal. The oats now only fit, for the most part, for making fodder cattle. The Congested Districts Board or the ricultural Board would do more for industrial ival by erecting corn-mills than by any other ject they have undertaken up to the present at at expense." I should like to hear a little more ut that. Few things are more depressing than see old corn warehouses going to wreck and ruin ause they were not used; and you have explained t the land is not fit to ripen oats for making al, and, therefore, I do not clearly gather what re is that induces you to believe that corn would w be grown in this part of the country?—I take that the good land would be given over to the ple of the country and they could grow corn.

48732-3. You think that, given an economic hold-, the climate would admit of your growing corn? Unquestionably. My project of corn mills was lant for all Ireland.

48734. Satisfactorily, and to pay? Yes; and on t supposition I make the statement.

48735. Most Rev. Dr. O'Donnell.—All that uld go before the corn mills?—Oh, certainly. I member the time, when I was a young fellow, re was no foreign bread stuff at all brought into county of Mayo worth speaking of. Every sholder had his own meal, and they manufac-ed their own clothes, friezes and flannels and eds and towels and sheetings and shirts and rything; and they had their own linen and their n wool, and every householder, as a matter of fact, d a plot of flax.

48736. Sir John Colomb.—That was practically a period when Ireland was more or less isolated, d competition was not so keen as now. Trans-t and all those things have brought the whole rld into competition?—Yes, but we have in Ire-d land as well able to produce corn as any land the world, and I see as good land for growing n, wheat, and oats in Ireland as in any part of Continent, and if you travel on the Continent d in England and Scotland you see that every bit land worth cultivation is under cultivation, and Ireland there is no good land under cultivation. ere is not a patch of land worth cultivation in all rope, except Ireland, that is not cultivated. But Ireland every bit of land worth looking at is pas-re.

48737. Sir Francis Mowatt.—To bring about that te of things is the main object we are inquiring o. You must not think that the questions we t are hostile to that?—I do not look on you as a stile tribunal.

48738. We have to ask questions, and it may look cross-examination, but we have to try to get the ts as they really are. We have at some length unfortunate result of Sir Richard O'Donel's nagement of his property, and unless you desire chaps you would be satisfied without going into at?—I have no desire.

48739. But we do not at all wish to stop you say-anything?—I do not wish to say anything about more than what I have given you in writing. hat the first witness very fairly stated is equiva-t to this.

48740. You now come to the steps that are abso-ely necessary for that purpose, and as I under-nd it the object of the next three pages of your morandum is to show that it is absolutely essen-l that powers should be given to the Government, th a Government department, to acquire the grass ds, which are confined to a comparatively small mber of people, for addition to the holdings of all holders to make economic instead of un-nomic?—Yes.

48741. That is really your object?—Yes.

48742. And you go on to argue from that, and to gue with great force, that such a course is the one d only course which would prevent the people de-riorating at home and would check this extensive igration to America?—Yes.

48743. Now we come to a portion of your memo-ndum which will have to be read fully, as it is in pute. It so happened that Mr. Doran, of the ngested Districts Board, has been with us for a w days, and we thought that it would be satisfac-y to you, and to those who had heard your evi-nce, that Mr. Doran should be required to attend d offer such explanations as he desired, either to plain away, or to qualify, or to admit the state-nts which you make. You say: "During the last twenty-four years 168 families left the parish for America. For fifteen years there was no emigration of whole families from this parish. During this period they fostered the hope that the Congested Districts Board would better their prospects by providing them with more land and better land, and thereby enable them to remain in the land they love best, and live in some sort of peace and comfort in it, blessings to which they were strangers in the past. But, alas, human expectations are not always realised, and their case proved no exception. The high prices paid for land of late years, and the dilatoriness of the Congested Districts Board in disposing of it, drove them in despair to the desperate alternative of emigration." I gather, therefore, that emigration has increased during the last fifteen years?—No; but for the last fifteen years there was no emigration until about three years ago, but within the last three years it has increased.

48745. Most Rev. Dr. O'Donnell.—What happened within the last three years?—Twenty families have left the parish.

48746. Do you say that the poor people went because they thought the Board was too slow?—Yes, and because they were paying too much for the land.

48747. How do you reconcile that with this statement, that within the last three years twenty families went to America from the parish—most of them well off?—Some of them were well off.

48748. Therefore it was not the poor people who were expecting enlargements from the Congested Districts Board who went?—They expected an enlargement from the Congested Districts Board, and during fifteen years there was no emigration from the parish, but during the last three years they went in despair.

48749. But you have also in your precis the statement—"for the last three years twenty families went to America from this parish, most of them well off?—Yes; a man left the parish this year having £500 in his pocket. He was herding in one of the islands that the Congested Districts Board bought, and when the Board bought it he gave up herding there, and went herding for Mr. Gibbons, up the mountains. Then it was rumoured that Mr. Gibbons was about selling his property, and it was also rumoured that herds and people not having land to surrender to get new holdings would get no land. He had a most intelligent, well educated, grown family, and he and the whole family went away about a month or six weeks ago.

48750. Would you consider that it is the people well off whom the Board should provide for?—A man like that I think should be provided for.

48751. Sir Francis Mowatt.—A man with £500 in his pocket?—Yes, so that he and his family should live in the district. He was an evicted tenant, and was very industrious. He used to herd and pick up periwinkles on the shore, and himself and his family managed to make a little money. That man should be provided for. If you send paupers into some of these fresh holdings I think they will not be able to hold on. I think that men of substance, energy and ability with a little means are very good men to get land.

48752. That is very good for the country, but is it the purpose of the Congested Districts Board to provide for a man with £500 in his pocket?—Yes, for a man like him—a man who had been evicted, and whose people had held land for generations in the country. I think that the accident of a man having put £500 together should not debar him from getting land.

48753. Most Rev. Dr. O'Donnell.—But do you not think that the poor people should first be looked to?—No; I would make no distinction in that case. He was entitled to land.

48754. Mr. O'Kelly.—Was he the herd on the farm that was sold?—Yes.

48755. And after the farm was sold he lost his herding?—Yes.

48756. You think it reasonable on a property of that kind to give him some land?—Certainly.

48757. Most Rev. Dr. O'Donnell.—He was not refused?—We asked for land for one or two others who were cottiers and who had pieces of land. They were not recognised as regular tenants. They were very industrious men; but the Board said that they had no land for such people at all.

48758. Was not the purpose for which the Board would buy the property to enlarge the holdings of those who had land and had too little?—But I do not

Aug. 26, 1907.
Very Rev. Canon Grealy.

think that a man herding on a property for years and bringing up his children there should be set adrift. I think he was highly entitled to a holding.

48759. Mr. KAVANAGH.—Could not he buy the tenant's interest in a holding?—That is another thing.

48760. He had got plenty of money?—He had.

48761. Why should not he do that?—He could not buy it unless there were persons prepared to sell it.

48762. Are there no tenants' interests in this country going up for sale?—Yes, from time to time, but the landlord has a veto.

48763. Sir FRANCIS MOWATT.—That comes back to compulsory powers again?—Yes. I saw a young industrious fellow who went in to buy a holding of a neighbour of his who was going to America. The Congested Districts Board served notice on the Land Commission to come and fix the true value of the land. He paid £50 for the holding, and I suppose that he will be turned out and lose his £50. The other person has gone off to America. No matter how you look at the question, there are difficulties.

48764. Most Rev. Dr. O'DONNELL.—Give us the name of this particular person who had the £500?—Conway.

48765. Was he the herd?—Yes.

48766. Is not the herd there still?—There is another Conway herding at the bridge of Bunahowen.

48767. Sir FRANCIS MOWATT.—The Conway to whom you refer went and became herd to Mr. Gibson?—Yes, he left the townland on which he was herding after the Board purchased the property, and went to Mr. Gibson.

48768. Therefore he was herding on a property when he emigrated?—Yes.

48769. Sir JOHN COLOMB.—The case to which you refer is, may I take it, an example of the broad fact that in this district a man without a scrap of land, by industry and energy, can accumulate a very tidy sum?—He did.

48770. That is open to everybody with energy and enterprise?—Not to everybody.

48771. What was his special quality?—He lived on the island and had great opportunities of picking up shellfish. There were people in the district who bought them and sent them to Manchester, Liverpool, and London in cartloads.

48772. Sir FRANCIS MOWATT.—Is that a large trade?—Some people make a good deal of money by it. I knew some of the poorest people in the parish of Newport when I went there to have become some of the wealthiest people in the place through that industry.

48773. Sir JOHN COLOMB.—Without any assistance from the Government?—Yes. They get for these shellfish from a shilling to fifteen pence a stone, and it would not take a family long to pick up a cwt. of them, but they cannot do it well except at high tides—the high spring tides.

48774. Mr. SUTHERLAND.—Possibly this man wanted to get to America in any case?—He did not. He would never have emigrated if he got land at home.

48775. Sir JOHN COLOMB.—Do you think has the railway increased the energy of the people in collecting shellfish and all that?—It has.

48776. Very much?—Yes.

48777. And has enabled these men by their enterprise and industry to make a good living out of shellfish?—It has helped them very much. You were talking of lobster fishing. As is the case with every other fish, you require a certain sort of seacoast to have lobsters. With a good run on the sea, and nothing but sand, you cannot have lobsters, or where there is a wild rocky beach; but if you have a rocky beach with not too much of a rough sea, with seaweed growing on the rocks, you have plenty of lobsters; but you have not much of that in Achill.

48778. Sir FRANCIS MOWATT.—We learned from the men in Iniskea that they come to Achill to catch lobsters?—Yes, and they come down from Connemara, from Clifden. They go round the whole way to Leitrim lobster fishing, and remain on the whole summer and never return home at all, the same as the labourers who migrate to England and Scotland every summer. They come along the coast the whole way to Sligo, and whenever they have a couple of dozen of lobsters they run into the nearest town to dispose of them.

48779. But these men do come here to catch lobsters so that you have lobsters on the coast. Continuing your precis you say: "The Board encouraged them to this course by giving exorbitant prices for their interest in their little holdings. This may be questioned and repudiated as an unfounded statement. I will not prolong the discussion on this point further than to quote a few examples, and let any impartial and competent person or tribunal decide the case on its merits. First, Myles Kilcoyne, tenant in the townland of Murrivaugh, was valued at 17*s*. The Board gave him £22 for his interest." We have a memorandum sent down by the Inspector. It says that this old man and his wife are going to America if they are allowed—I suppose that means if they are allowed in—but if they are turned back they will occupy portion of the old holding as sub-tenants for their lives to one of the adjoining tenants. Your point is the valuation of 17*s*.?—They had a fine young man and young woman well able to work land.

48781. Sir JOHN COLOMB.—Four people trying to live on land valued at 17*s*.?—Yes. They are the people who ought to get farms of land in the district, and it is a terrible state of things where you have 35,000 acres of land in grass in the parish to see those people driven to a foreign country in that way.

48782. Sir FRANCIS MOWATT.—You say that £22 was too much to give on a valuation of 17*s*.?—Yes. It would be equivalent to thirty years' purchase of his interest in the place, and 21½ to the landlord, in all 50 years' purchase. Who could repay it?

48783. Most Rev. Dr. O'DONNELL.—Do you think that is a very big price for a small holding?—It is very big. I have known people to leave the parish and to get nothing for their land. They leave it to a brother, sister, or nephew and go to America, on condition that if they returned in three years they would get it back.

48784. Are not you aware that small holdings go for extravagant prices?—Yes, but no one in his senses except he had another piece of land would buy 17*s*. worth of land to live on.

48785. But might not he buy it for addition to another holding?—He would give £4 or £5 for it, perhaps, in that case.

48786. In other parts of the country there are 40, 50, and 60 years' purchase paid for these bits of land?—I have often seen that done. I have known cases where 60 years' purchase of land was offered this year by people who have made money in America or England. They come home; they are homesick and wish to live at home, and they would give any price for a bit of land in order to live at home, but in no other cases did I ever see such high prices given.

48787. Was there a house on this holding?—There was.

48788. Do you consider £22 too much to give to those people?—Yes. I would say that £5 or £6 was too much to give.

48789. Sir JOHN COLOMB.—Suppose the man put it up in the open market he might get more?—He would not. No one would buy that except a neighbour whose holding it touched, and he might buy it. If he had fourteen or fifteen acres he would get a big price, but not for a wretched patch like that.

48790. Most Rev. Dr. O'DONNELL.—Do you know what the rent of that holding was?—I do not.

48791. Would you be surprised to know that it is £1 11*s*.?—I took the valuation, and I would be sorry to make a rack-rent the basis of purchase, and £1 11*s*. is a rack-rent.

48792. How did you ascertain the valuation?—From the rate books.

48793. The price of these holdings is generally estimated at so many years' purchase of the rent. I think that £22 would not be fifteen years' purchase of £1 11*s*. It is perfectly strange to me to find objection raised to this price being given for the tenant-right of a small holding?—The reason I object to it is because it encourages emigration so much in the district, besides being an exorbitant price.

48794. I would like you to find any holding in Achill with a rent of £1 11*s*. that would be sold for £22, and Achill is much more out of the way than the land around Westport or Newport?—I do not think it is.

48795. I venture to say you would not find in Achill a holding rented at £1 11*s*. that would be sold for £22?—I knew little holdings in that neighbourhood that brought from £6 to £7.

48796. Sir FRANCIS MOWATT.—You say "Another Kilcoyne tenant in Murrivaugh bought the interest of a man named Purvis in his holding for £11. The

ngested Districts Board gave this Kilcoyne tenant 2 for the same holding." Had there been no im-ovement in the holding in the meantime?—None atever.

18797. Do you know what was the rent?—I could tell you.

18797A. Most Rev. Dr. O'Donnell.—The rent was 10*s.*?—Another rack-rent the basis of purchase.

18798. Sir Francis Mowatt.—That is sixteen ars' purchase?—The rent is no test of the value of land. I knew tenants on that estate of Mr. oney paying from £9 to £12, and the land that s £12 is only £3 now, with the reductions under Land Act. What an exorbitant price would be id if this £12 instead of the £3 were to be the sis of purchase!

Mr. Sutherland.—The price in that last case is y mild compared with the prices we have heard of dly in other places.

18800. Sir Francis Mowatt.—You proceed: "The ngested Districts Board bought under the Ash-urne Act the Lands of the tenants on the Rosturk tate, Mr. Stoney's property, at 21½ years' purchase the rent, the Islands, untenanted lands on the me estate, at 21½ years' purchase on the rent. This ate was bought in 1898 or 1899. Up to the pre-nt the tenants have to pay the old rents, no reduc-n, no advantage, except emigration." The tenants remaining on at the old rent?—Yes.

18802. Do you know whether any improvements are ing carried out by the Congested Districts Board? Yes.

18803. Is this particular case like others. Is the ole of the rent paid by the tenants expended on e improvements?—I do not think they are doing a eat deal of improvements for the last twelve months the land. The people up to this have got no re-ction in their rents.

18804. Yes, but they get the improvements done for thing?—Yes, but when they bought Lord Dillon's tate they gave the tenants 6*s.* 8*d.* in the £ reduc-on, and here they have a poorer class of tenants ght or nine years, and they did not get a shilling duction, and they were entitled to a second judicial nt at the very time that the estate was bought, d they have not got a penny from that to this.

18805. Mr. O'Kelly.—They did not give the Dil-n tenants the 6*s.* 8*d.* right away. It was some me afterwards.

18806. Sir Francis Mowatt.—When you say they ve got no advantage they have got the advantage the improvements which have been carried out?—es, but on other estates the Board give a reduction rent and make improvements.

18807. Most Rev. Dr. O'Donnell.—And more than at, in the making of the improvements they have en paid wages?—They have. That is being done erywhere.

18808. Would you say that that is not an advan-ge?—It is an advantage, but they did not get the me advantage as the other tenants got whose lands ere bought under the Act.

18809. Sir Francis Mowatt.—Then you say: "At is pace the lands of the parish would not be re-ar-anged in 100 years, and as regards this parish, othing less than a re-arrangement will do any good. nything else will be only a sham and a mockery of e people." Then you refer to a complicated mat-r, and I will read your memorandum, and after-ards Mr. Doran will say what he has to say about . "Together with untenanted land and islands n Mr. Stoney's Rosturk Estate the Board bought 500 acres of mountain untenanted, on the same es-te, and from the same Mr. Stoney in 1898 or 1899 nder the Ashbourne Act. The price for the moun-ain was £800. What happened? Notwithstanding at it is a most congested, a slum-of-the-slums estate, hopelessly so in the estimation of the Board, that ey considered it a mercy to give an exorbitant rice to the tenants of it for their interest in their oldings as an encouragement to voluntary expatria-on"—you do not suggest that the Congested Dis-icts Board deliberately intended to encourage emi-ration?—It had that effect. I do not impute any alice.

18810. "In 1905 the Board resold 2,500 acres"?—es, 2,000 acres of the mountain.

18811. You continue, "The only part of the moun-ain that was any good or worth having to Mr. Stoney for £600, leaving the unfortunate congested tenants only 500 acres of bare rocks to enlarge their terribly uneconomic holdings at a price of £200. Now, at the rate they charged the tenants they should have charged Mr. Stoney, the rich landlord, at least £800, and a great deal more considering the fact that his portion is good pasturage and well sheltered, and their's the very refuse as to pasture and shelter. If we take into account, too, the inflation of the price of land under the Wyndham Act in addition to other circumstances, the Board should have got £1,200 for the 2,000 acres, if it can be admitted that they have power to resell it to the landlord after a lapse of six years under any circumstances. The purport of the existence of the Board and of the existence of the Act of 1903 seems to me to be in entire opposition to the resale of the mountain to Mr. Stoney at any price. He wanted it only for sport. The tenants wanted it for their bare existence. It was as valuable to them as all their slum holdings put together. They could rear as many sheep on these 2,000 acres of good mountain as would produce wool enough to provide clothes for themselves and their families." During the years in which the Congested Districts Board held these 2,000 acres before they sold it back did they admit the tenants to graze upon it?—I heard that they were setting the land to graziers, that is, taking on cattle and sheep at so much per head. The tenants about there had no cattle or sheep, and in any case they complained that the price was too high.

48812. Most Rev. Dr. O'Donnell.—Of what use is it to them if they have no cattle or sheep?—I often saw people with no cattle or sheep and their holding of land set to neighbours for a year or two until their family would grow up and be able to earn, and these people became the most comfortable in the whole country and cultivated and worked their own land afterwards.

48813. Where did you get the figure £800?—I got it in an answer given to Dr. Ambrose in the House of Commons.

48814. I am afraid it is not accurate?—It was given in the House of Commons.

48815. Mr. O'Kelly.—Mr. M'Hale said that this land used to be grazed before the Board got hold of it?—Some of it used to be grazed, but not all of it.

48816. Then the statement of the Congested Districts Board that this land has never been grazed by the tenants is not altogether accurate?—No.

48817. Sir Francis Mowatt.—This is what I want the explanation of. If the 2,000 acres were as valuable as all the slum holdings put together, and if they could rear as many sheep as would provide wool enough for themselves and their families, how is that consistent with saying that they have no cattle or sheep?—Some of them have not. Some of them have, and in the course of time, under improved conditions, all would have stock.

48818. That probably explains why when it was put out at what I am told is the rather moderate price of eighteen pence per head of cattle the Board, in point of fact, received from grazing tenants in 1891, £9; in 1892, £13; in 1893, £3; and in 1894, £9; and during the whole time from 1891 to 1894 the total amount paid by the tenants for feeding their cattle was £35 in four years?—We consider if they had given the 2,000 acres to the tenants for nothing it would not be very much of a concession. If you take the interest of that £800 at 4 per cent. it would represent £32 of a concession. I don't think it would be very much of a concession to those poor people if they had those mountains without a penny for them at all. As a matter of fact the tenants say that the Congested Districts Board charged more for the mountain and the arable land than was ever charged before. I do not know that personally, but that is what the tenants say.

48819. Most Rev. Dr. O'Donnell.—Have you any figures for that?—I have no figures myself. I am only saying it from hearsay.

48820. Sir John Colomb.—What was the usual amount asked in the district per head?—Mrs. Pike has a lot of grazing, 5,000 acres in Achill. I heard she gave right to graze this 5,000 acres to her tenants at 1*s.* per beast all the year. They could put in 1,000 head if they like.

48821. Sir Francis Mowatt.—You continue, "The Board in its extreme benevolence paid for the fencing of this immense game park and lent its engineer to superintend the good work for this rich gentleman."

Aug. 26, 1907.

Very Rev. Canon Grealy.

That means that they put up a boundary fence?—Yes.

48822. And that the Board's engineer looked after the erection of their own boundary fence?—Yes. I think that the money of the Congested Districts Board could be better utilised than in fencing in game parks, for which it was never intended, when the people wanted land so much.

48823. What they did is, having sold part of the land they put up a boundary between their land and somebody else's land?—If a gentleman wants a game park he should fence it himself. There was never a fence there, and never would be wanted, if he did not make the game park in the very centre of a mountain range.

48824. Sir JOHN COLOMB.—Do you mean to say that the Congested Districts Board could fence round the whole 2,000 acres at the expense of the Congested Districts Board, or that they made a boundary fence between part of it and their land?—They should surround most of it with a wall, because the tenanted land runs around it, except up at the top of the mountain.

48825. It was all a boundary between two properties?—Yes.

48826. Is not it the law that where a boundary has to be put up between two properties of two tenants they pay the expenses half and half?—Not in this case, because this was a sporting park got for a gentleman. I think if he wanted sport it should not be fenced in at the public expense.

48827. Is it not the law no matter what the property is?—I would disregard the law in such an exceptional case. I would have no regard whatever for it under the circumstances. In ordinary circumstances it would be the thing to be done, but here it was not.

48828. Mr. O'KELLY.—What was the cost?—I could not tell you, but there was a question put in the House of Commons and the Board admitted to the Chief Secretary or to some official of the House that they had defrayed portion of the expense of fencing in this way.

48829. Most Rev. Dr. O'DONNELL.—On their own boundary?—It is my opinion that they should not have done it no matter what pressure they got, and I say it was an abuse of public money under the circumstances.

48830. You seem to state that they fenced in the whole of the 2,000 acres?—That I am not sure of, because if you went up to the high mountain on the north side you could not fence it.

48831. Did they fence except on their own boundary?—Their own boundary surrounds all, except on the north side. It forms perhaps three-fourths of a circle.

48832. Mr. KAVANAGH.—If they had not re-sold this part would not they have had to fence the whole mountain?—Not at all, because the tenants' holdings were here, and the mountain was used for the cattle and sheep off the land. It was never fenced, and never required to be. There are from ten to twelve miles of mountain in this locality never fenced and never will be.

48833. Was there one estate all round the 2,000 acres?—It was, except on the east side. I don't know what bounded it on the north, because on the north it went into the parish of Ballycroy, in the barony of Erris.

48834. Sir FRANCIS MOWATT.—Then you say: "The Board's plea is that they gave back the mountain in exchange for land elsewhere to Mr. Stoney. In the first place the Stoney family had only a lease of this land. Mr. Jones was the landlord. In the second place, for years before this so-called exchange of lands took place, and on more than one occasion Messrs. Jones and Stoney promised deputations composed of their tenants, and other influential people who accompanied them, promised cheerfully and unhesitatingly, that they would at any moment sell these grass lands which were let on the eleven months' system to graziers, to the Congested Districts Board at a fair price for the enlargement of slum holdings." That is the land that the Board got in exchange?—Yes.

48835. Then you go on: "Sure enough, these gentlemen got more than a fair price for those grass lands. The valuation is £131—the price paid £3,973—over thirty years' purchase, or, together with the bonus, thirty-three years' purchase. What a difference between this price and the price of the 2,000 acres of mountain."

Most Rev. Dr. O'DONNELL.—How many years' purchase of the valuation did Mr. Stoney give the Board for the 2,000 acres?—I don't know what the valuation of the mountain was at all.

48837. Is not that important, because you say he got a better bargain that he gave the Board?—The people would rather give £3,000 for the mountain than £3,000 for the 150 acres. The Board gave Mr. Stoney 2,000 acres, the best of the mountain, for £600, and gave the tenants 500 acres, the worst part of the mountain, at £200—the land they got in exchange.

48838. Are you sure of that?—They say so.

48839. Do they all say so?—It would give them more accommodation. This other land is five or six miles away from the Rosturk Estate, and the mountains adjoin the top of their holdings.

48840. Apparently they were using very little of the 2,000 acres of mountain?—They would use it.

48841. They were using it very little?—I dare say.

48842. Were not all the people in the district anxious that the Congested Districts Board should acquire grass land, good land, to add to the small holdings?—Yes; but the people of the district who have called on the Congested Districts Board to intervene and buy from the landlord always made it a condition of the arrangement that the mountain land and grass land should be bought along with their holdings, and even before the Congested Districts Board re-sold this 2,000 acres to Mr. Stoney they called on the Board to buy Mr. Jones's property, but not to buy it if they did not get the mountains, and 150 acres of grass lands.

48843. Were not they two separate transactions?—Yes.

48844. The Stoney Estate, including the mountain that you are referring to, was purchased by the Board?—Yes.

48845. Then the Board wished to purchase this 200 acres of grass land?—Yes. They were buying Mr. Jones's property, and the tenants called on the Board to buy these grass lands and mountain, or they would have nothing to do with the purchase of the estate on any terms.

48846. Then the Board had this before its mind. The tenants were using the mountain range to but a limited extent; and it parted with the range for £600 because Mr. Stoney otherwise would not sell to them over £3,000 worth of grass land?—That land did not belong to him at all. Mr. Jones was the proprietor. He could not sell it without Mr. Jones. Mr. Jones was anxious to sell it. Mr. Stoney, of Rosturk Castle, had no right to sell it at all; he was only a tenant to Mr. Jones.

48847. Sir FRANCIS MOWATT.—Also, as a matter of fact, the Congested Districts Board have never paid him for it?—I am glad to hear that, but the whole thing is in a very great muddle. Then Mr. Stoney gave them the right of passage through Sir Roger Palmer's property. They had one of their own engineers making the road, and they were stopped first by Mr. Stoney's brother, who claimed the tenant-right, and then by Sir Roger Palmer's agent. Certainly one would expect that they would know that Mr. Stoney was giving a right through Sir Roger Palmer's property.

48848. Most Rev. Dr. O'DONNELL.—Were you and others in the district who were anxious that the Congested Districts Board should buy land for the enlargement of holdings of tenants able to put Mr. Doran on the track of other land that could be bought without any of these complications?—Yes. I asked Mr. Doran to buy the tenant-right of some lands in the parish, and he did buy them. He consulted me, and I consider that he bought them moderately, too; but of late years he did not consult me. He would not come near me. I do not know why; I gave him no reason.

48849. Mr. O'KELLY.—Even if this 200 acres were in another place, do you consider it would justify them in parting with the 2,000 acres?—It would not.

48850. Mr. SUTHERLAND.—They could not get both, and one was the alternative of the other?—That is not true, because before there were any negotiations at all with Mr. Stoney about the mountain deputations of the tenants went to Mr. Jones to ask him to sell those grass farms, and he said that Mr. Stoney had a lease

them, and nothing would give him greater pleasure than to sell them, and to go to Mr. Stoney, the tenant, and ask him to sell his tenant-right. They went to Mr. Stoney. Both were together, and Mr. said that they would give the land to the Congested Districts Board at any moment. This was long before there was any question of an exchange.

48851. Most Rev. Dr. O'DONNELL.—Did you hear that when Mr. Doran asked Mr. Stoney to sell these grass lands he declined unless the 2,000 acres of mountain were handed back?—I don't know what was said to Mr. Doran, but they said to the tenants that they were prepared to sell at any moment to the Congested Districts Board long before there was any question of swopping the mountain and arable land.

48852. Was it before the first estate was sold to the Board that that statement was made?—The Rosark Estate was sold to the Board at this time, but Mr. Jones's Estate was not sold at the time that the deputation waited on Mr. Jones and asked him to sell his mountain tracts and to sell those two farms that Mr. Stoney had on lease, and he said he was quite willing if Mr. Stoney would sell his interest. The tenants went to Mr. Stoney next day. They were both, Jones and Stoney, going out shooting. The deputation met them. They both said any moment the Congested Districts Board give any reasonable price for it they can have it.

48853. Most Rev. Dr. O'DONNELL.—In what year was that?

A Member of the Audience.—On the 9th of November, 1903, the deputation waited on Mr. Jones, and the following day it waited on Mr. Stoney.

48854. Sir FRANCIS MOWATT.—Then you say: "The Gilbride Farm was bought of Mrs. O'Donel, valued at £87, price £1,800, twenty-seven years of the valuation, plus the bonus." Do you know what was the rent?—I don't, but I would not say that that was an unreasonable price. I don't complain of that. It is good land and convenient to the town, and there were no tenants on it.

48855. You proceed: "Mr. Curran's Estate bought of Mr. Simes in 1888 for £1,500, valuation £117, was purchased by the Congested Districts Board in the year 1905 at £4,000. This was thirty-five years' price on the valuation." There again you cannot tell the rent?—No.

48856. Continuing, you say: "How can it be expected the new tenants of these lands can pay the annuities that will be required to meet the principal and interest? The Board is, no doubt, doing good work for the country, but they would do much better if there were representative men on the Board from the congested areas who would understand the country all their lives, and its circumstances and needs. No one can understand the wants of this immense coast territory like a native. The Board should hold its sessions in the congested counties rather than in Dublin or London, and have the time and place of each sessions published beforehand, and invite the County and District Councillors to attend, and give the benefit of their advice on the matters to be discussed at the session. It would be for the Board to act on the advice given or not afterwards. There can be no doubt whatever the Board would in this way obtain much useful information, and would be more in touch with the public opinion of the districts concerned, and their work would inspire confidence instead of, as at present, suspicion of underhand influence guiding to some extent their operations. The Board, strangers for the most part to the districts in their charge, are too much in the hands of paid officials, some of whom, to say the least of it, have not the confidence of the people for whose welfare they work."

Most Rev. Dr. O'DONNELL.—Do you know of any land that the Board could have bought cheaper in the district?—There is a great deal of grass land in the district, but I do not know if the landlord would sell.

48858. Sir FRANCIS MOWATT.—You think it better not to buy land at all than to buy it at such a price as those to which you have referred?—Unquestionably.

48859. From what you say, I gather that first of all you think there should be added to the Board representative members from the rural counties for which they are working?—Yes.

48860. When you say representative have you in your mind men elected by the committees themselves?—I think that the better way to do it would be to have the County Council elect the member for each county to represent the county on the Board.

Aug. 26, 1907.

Very Rev. Canon Grealy.

48861. And to see that the county got its fair share of whatever money was going?—To explain the wants of the district, bring them forward, and have them considered.

48862. Sir JOHN COLOMB.—Do you mean to form a consultative advisory body or that the Congested Districts Board should be composed of representatives nominated by the County Council?—I put it here that there should be an Advisory Board in every congested county, and I suggest the District Council or the County Council, but I suggest also that every congested county should have a representative on the Board as a member of the Board. From Ballina to Galway, along the sea coast of Galway and Mayo, there are hundreds of miles of the poorest districts in Ireland. Gentlemen in Dublin or London or any other place who perhaps never put a foot into the district could not know the wants of the district like a native. It is absurd on the face of it, and could not be entertained for a moment by an ordinary man.

48863. Most Rev. Dr. O'DONNELL.—You think that there should be some member who would know the coast and its wants, and the districts and the possibilities of developing fishing?—Exactly, I would not go in for multiplying it, but I expect that every congested county ought to have a member. There should be an advisory committee. The meetings should be held in the congested counties rather than in Dublin and London.

48864. Sir FRANCIS MOWATT.—Do you say an advisory committee for each county?—Yes.

48865. And that advisory committee would advise their representative whom they elected?—No, the Congested Districts Board as a Board; that they would send their views to the secretary for consideration.

48866. Would not it be better that they should come through their own representative. If you don't do that you will have two separate currents of opinion. You will have the advisory board advising the Congested Districts Board, and the representative of the Committee and the Congested Districts Board would have to decide between them if they did not agree?—I would give them no more than a voice on the Board in the affairs of the county no more than any other body.

48867. Personally I would say that the advisory board had better advise their representative?—You will have mistakes to the end of time if local opinion is not consulted. It is a matter of too much importance for the Congested Districts Board to leave the management of the whole Counties Mayo and Galway in the hands of a few officials. No matter how competent they are they are not able to take in all the work or to know the wants and needs of the people of the district. If we had legislation in accordance with the wishes of the people we would not require so much coercion or dragooning of the country with police and soldiers and everything else of that sort. If the wishes of the people were consulted they would not be so unreasonable.

48868. I think the next point you come to is the Newport Workhouse?—Yes.

48869. We have had the case for that stated at some length. As I understand nothing has been done up to now towards the demolition of those buildings which would in any way prevent their being used. They have demolished only the dead house and fever annexe?—Yes.

48870. Therefore, what you advise is that, before there is any further demolition, it should be considered whether it could be further utilised either by the Congested Districts Board or by the Department as it is called, for some useful purpose?—Yes. That place cost an immense amount of money, and, seeing that people are getting up schools, colleges, and buildings for the public good, it would be a very bad thing to tumble it down.

48871. Most Rev. Dr. O'DONNELL.—Have you in your mind anything that would be useful?—An agricultural college, and a great many purposes, such as the rearing of stock and so on.

48872. Is there any land attached?—You have 400 acres of land within a stone's throw of it. A corner of Derrylahan Farm almost strikes the boundary wall

Aug. 26, 1907.

Very Rev. Canon Grealy.

of the workhouse. There is no part of the farm I might say that is not adjoining the workhouse. There are 400 acres very suitable for an agricultural college. You have a railway station with a siding and a pier at Newport.

48873. Sir FRANCIS MOWATT.—Would you be an advocate of using the 400 acres or any part of it as an experimental farm?—Certainly I would. You could have 200 acres for agricultural purposes, and 200 acres of it could go for the extension of holdings.

48874. Mr. O'KELLY.—What is it used for now?—Nothing, except the rats in the floors and the jackdaws choking the chimneys.

48875. Are the Congested Districts Board removing the stones?—During the last few days they are throwing down some of the out-offices, but that will not interfere with the general building.

48876. Do you think is there any intention on the part of the Board to demolish the buildings?—I don't know what is the intention of the Board, but I think that it would be a pity to throw it down.

48877. Sir FRANCIS MOWATT.—I think I may say, after the evidence that has been given, very great consideration will be given by the Board before anything further is done. We come to the fishing now. I have already explained that it is not within our power to recommend particular works, but we are obliged to deal with the subject generally. You point out that there have been a good many piers put up which experience has proved to be perfectly worthless?—Yes.

48878. I think that that is common ground. You need not elaborate that. The harbour which you recommend is Roigh Harbour?—Yes, about midway between Mallaranny and Newport. You have two railway crossings, one at Mallaranny side and one at Newport side, and a little flag station would suit there to take away the fish or anything like that, about a mile from the harbour.

48879. Most Rev. Dr. O'DONNELL.—How far is it from the harbour that was proposed at Inislyre?—Six or seven miles south of it.

48880. Has the Inislyre project been abandoned?—I think it has.

48881. A great deal of money was practically earmarked for it?—Yes; £70,000 was proposed for it.

Most Rev. Dr. O'DONNELL.—And the Mayo County Council was contributing a considerable sum.

Mr. O'KELLY.—They guaranteed what they called an insurance fund of £3,700 for four years

48882. Most Rev. Dr. O'DONNELL.—What prevented the project in the end from maturing?—Of course if you are to develop the fishing of Clew Bay you must have a harbour, but in my opinion it would have been a very vast expenditure to expend £100,000 on Inislyre. That is my personal view.

48883. Sir FRANCIS MOWATT.—The same thing applies to certain little piers you suggest at Doobeg, Murrivaigh, and Killeen, which could be used for fishing, seaweed, and turf supply to the islands and villages on the sea coast. Then in the last paragraph you give a list of the principal land monopolists in the parish?—Yes, except that I did not give the Congested Districts Board. I am glad to say that they have about 1,200 acres of untenanted land in their hands at present, but they cannot buy it out. Over 700 acres of that property has been in Chancery for the last twenty years, and Judge Ross keeps a hold over anything he can get.

48884. Most Rev. Dr. O'DONNELL.—I am greatly interested in that suggestion of yours about an agricultural school for boys. Is it your opinion that boys would derive benefit from an agricultural school while at the same time prosecuting successfully their ordinary studies?—I think so.

48885. The agricultural education might go on without taking from the other education?—Yes. If they gave them a full day in the week for agriculture on the farm one skilled teacher would do five or six parishes and devote a whole day to agriculture in each, and have the agricultural school attached to some of the National schools, and take the boys in that district one day, and go on to the next parish the next day. If they are not taught in their youth they can never be taught afterwards. A tradesman, to be good, must begin in his youth. If you wait until he is an adult you will never make a good tradesman out of him.

48886. Mr. O'KELLY.—In your memorandum you speak about the people having suspicions of underhand influences guiding the operations of the Board. Is there any connection between that and the re-sale of this 2,000 acres?—That is what we think.

48887. Will you elaborate that as briefly as possible?—Simply that one of the agents of the Congested Districts Board, Mr. Vereker, was for years Mr. Stoney's agent, and Mrs. Pike's agent here in Achill, and agent on the O'Donel estate and several other estates; and a gentleman like that, who is constantly dining and supping in the big houses, when selling and valuing land and buying from and selling to these gentlemen, cannot be considered impartial, and we have no confidence in him. It is only since Mr. Vereker was appointed that all this muddling turned up. Of course he might do very well in another county, where he had no connection, but we have no confidence in him. He might do very well in Cork or Kerry, where he has no connection, but he has very extensive connections in this county and in the County Galway. A person with no connection is the proper person. Human nature is the same all round. If you or I were put in that position, although we did not wish it, or did not mean it, we should be partial. We cannot divest ourselves of our nature.

48888. It is only fair to Mr. Vereker to point out that he says that Mr. Doran arranged the sale of which you complain?—I don't know who arranged it, but it was a bad business where the congestion was so great. These poor people are valued at £1 and 15*s.*, and I know children of nine and ten years of age who are brought by their parents over to Scotland to help in picking potatoes when they should be at school. This shows the necessity of enlarging their holdings in order to give these poor people an opportunity of living.

Mr. HENRY DORAN examined.

Mr. Henry Doran,

48889. Sir FRANCIS MOWATT.—You are chief land inspector under the Congested Districts Board?—Yes.

48890. Canon Greally, in his evidence, reflected somewhat on the action of the Congested Districts Board, and I said that I would call on you to give such explanations as you thought well. I think you were present during his examination?—Yes.

48891. I need only deal with these matters extremely shortly, but I would like to touch on some which appear to me extremely important. In the first place the Canon said that some of the inhabitants did not put full confidence in the officials who worked for their welfare, and he explained that the official to whom he referred was Mr. Vereker, the Board's assistant chief land inspector. He was under the impression, rightly or wrongly, that it was Mr. Vereker who negotiated what I may call the second purchase on the Vesey Stoney estate, and that he had it in his power in some way, the Canon said, no doubt quite unintentionally, to fix the price which was paid for that. I will ask you first of all to tell us whether Mr. Vereker did in fact conduct any negotiations with Mr. Stoney for the purchase of his land; is that so?—No; he took no part whatever in any negotiations with Mr. Stoney for the purchase of any of his land.

48892. Did he suggest, either directly or indirectly, thirty years' purchase of the valuation of the grass land purchased from Mr. Stoney?—No.

48893. Had he any power, directly or indirectly, of affecting the price paid?—No. I might say that I conducted the negotiations and concluded them, and I am responsible for anything that is done, and for any fault that can be found. Mr. Vereker had nothing whatever to do with it. Perhaps I may say that when Mr. Vereker was appointed on the staff of the Board as assistant to me he had been land agent for several properties, and it was so obviously objectionable that he should have anything whatever to do with any negotiations for purchase of estates in respect of which he was agent that I arranged with him that in all matters connected with any estates

r which he had been agent at any time, that ther in the preliminary negotiations or up to the ie of purchase was he to have anything whatever do with them; and that arrangement has been ried out up to the present moment.

8894. There is one point that was not raised, but smuch as questions and answers in Parliament re referred to, I should like to draw your attention a statement which personally I did not quite under- nd at the time—"The Land Judge did not con- er it advisable that Mr. Vereker should be dis- arged as receiver when he entered the Board's vice, and the petitioners' solicitors opposed the charge on the ground of needless expense. Mr. reker was discharged in August, 1905, but he never eived any payment or fees of any kind for his eivership in 1905"?—No part of the Stoney Estate s in the Land Court. That communication refers the O'Donnell Estate at Newport, over which he s receiver, and which we have not yet purchased.

48895. I am sure you will understand, and the icials of the Congested Districts Board will under- and, that the Canon did not desire in any way to flect on the intentional *bona fides* or straightfor- ardness of the Board's officials, but only that he ought that in this particular case this gentleman ight have been, without being aware of it, influenced mewhat by his previous connection with the estate?—I am quite sure that the Canon would not think at anyone connected with the Board would de- berately do what was wrong, but I think that, nsidering he is the most influential person among e extremely poor population on the area stretching om the Sound for miles beyond Newport, he ought have seen at least the necessity for applying for rrect information.

48896. The Commission will judge of that?—I think am entitled to say that much in reference to the atter.

48897. If you will turn to page 12 of the precis of he Canon's evidence, you will see that he refers to migration and he says that during the last 24 years 68 families have left the parish for America. For ifteen years there was no emigration of whole families rom the parish: during this period they fostered the ope that the Congested Districts Board would better heir prospects by providing them with more land and etter land, but that the high prices paid for land of late years and the dilatoriness of the Congested Districts Board in disposing of it drove them in despair to the desperate alternative of emigration. I don't know that I need ask you about that particular statement, because we have had an explanation, which is that the delay in dealing with the land arose from the fact that it was impossible for the Board to obtain possession of the arable and grass lands which were necessary for the enlargement of the holdings; and, in point of fact, even to this moment I believe you have not been able to obtain the completed title?—The reason for the delay in dealing with the estate is very well known to the tenants, and, so far as I know, not a single tenant complains of it; but this is due to agitators.

48898. Never mind that; we only want to know the fact?—There are some people who want to make trouble, and go out of their way to do so, without taking the trouble to inform themselves accurately. I must ask you to listen to this short statement. On the Vesey Stoney estate there were 170 tenants. The average poor law valuation of the holdings was £1 6*s*. 8*d*. There is a sample of three of the townlands (map produced). There is a picture of their holdings. A holding of 30*s*. might be held in twenty different patches. I quite agree with Mr. M'Hale that if these people got their holdings for nothing at all their position would not be substantially improved. That was the view the Board took. The Board, through me, and the other officers explained to me and the people that if they were merely to stripe their lands as they held them and give each of them an equivalent of the land they held that really they would not be able to confer very much benefit upon them, and that the only remedy was to try to get land, and to get it as near as we could. I challenge Canon Grealy or anybody else to show that the Board have lost a single opportunity of acquiring untenanted land in his parish, from the day they bought the Stoney Estate. They did what they did not do anywhere else. When some three holdings of large grass farms, or comparatively large, on the adjacent O'Donnel Estate, were offered for sale by a public body, that is the tenant-right of them, they actually bought them in order to be in possession and in anticipation of purchasing the fee simple of the estate. One of these farms, Derrylahan, that you heard about to-day, as being a place where there were a number of tenants living up to the time of the Famine, is still in their possession. They have it seven or eight years. Some people complain of their keeping it so long, although these very people know—Canon Grealy knows, Mr. M'Hale knows, and all the people who were complaining of the Board's action were perfectly well aware of the fact that the Board as a judicial tenant of the lands cannot stripe it up until the Board become owners in fee. I cannot see that this sort of criticism is honest at all in face of the knowledge that they must have of the facts. Besides the Derrylahan Farm there are two other farms belonging to a man named Adams, that were offered, and the Board also bought the tenant-right of these, in anticipation of getting the fee. Until they get the fee they cannot utilise the lands. With the same object they approached Mr. Stoney at different times to sell the grass farm that he had near Rosturk Castle. Mr. Stoney refused to sell for several years, his main reason being that if he gave up these lands his farming operations would be so contracted that it would not pay him to keep a steward—I am speaking of what he said to me—and that he would not sell them. That was after the Board had purchased what we call the number one estate—the first estate we bought. Some years, however, elapsed, and he then approached the Board, hearing they were able to make nothing out of the mountain division of the estate that they had purchased. That is to say that, although the people were offered the use of it for their stock, very few of them availed of it.

48899. Very few of them having stock, I understand?—That was one reason. Another reason was that although in some cases we offered to give them loans to stock it, they said they had too much of this sort of land already—and I believe that this is a perfectly sound answer—and too little arable. They said—"we cannot keep the stock all the year round on this mountain, and unless we have sufficient arable land and meadow to raise food for the stock in winter, we would not be able to use the mountain land profitably in connection with the holdings." As proof of that, during the four years we had it in hands, the largest number of stock we had on them at any time, as far as I remember, was about thirty, and the average rents we received for the grazing averaged only about £8 15*s*. a year for the four years. That was for land for which Mr. Stoney was willing to pay the Board £600, and Canon Grealy's suggestion was that the Board should let the tenants have this land for nothing.

48900. I don't think the Canon went quite so far as that. I think what he said was that even if it had been given to the tenants for nothing it would not have been a great concession?—I need not develop that any further than this, that when the Board purchased this estate from Mr. Stoney it contained over 2,000 acres of this mountain land. For five years we offered the tenants free access to it at a mere nominal rent for their stock. Very few of them availed of it, and it was not absence of stock or absence of money to purchase stock alone was the reason, but the fact that stock can only thrive on it for three months of the year. They could not keep them much longer on it, and, unless there was another way to use them in the intervals, they could not use it with advantage. Many of them declared to me that they had too much of that kind of land—these were just their words—and that if they could get some good lands—referring in fact to those in Mr. Stoney's possession—some of them would go there and make room for the people who would remain. I believe that was perfectly sound. I approached Mr. Stoney again about it, and he said if he got back the mountain he would enclose it, and endeavour to convert it into a game cover, and that if the Board agreed to give him back this mountain land he would give back the grass lands which he had previously refused to sell.

48901. Mr. SUTHERLAND.—This is an important point which you have now reached. Did he make this a condition of his sale that he would get back the mountain?—Most emphatically he did. All through the negotiations

Aug. 26, 1907.

Mr. Henry Doran.

he absolutely declined to consider the matter at all unless he got back the mountain. The result was that I finally arranged it, and I am the only person responsible, as Mr. Vereker had nothing whatever to do with it, and if there is any fault to find I am the one to blame.

48902. Mr. O'Kelly.—Did the local people scarcely use the mountain farm before the Board bought it?—No. There was no fence upon it, and what they called the old Board of Works' road was admitted to be the boundary between what belonged to the tenants and what was reserved to Mr. Stoney.

48903. You heard the evidence of Canon Grealy. He said it would not be accurate if your Board said that the local people did not graze this mountain?—Yes, but you qualified your question. He said they had no right to graze it.

48904. I merely suggest to you that Mr. Stoney used to allow his local people to graze this land at a certain price?—Yes, and very little he got out of it.

48905. Would you be surprised to know that your Board has practically contradicted that?—They have not contradicted it. Read the letter preceding that which has been read, and you will find that the question asked in Parliament was whether these people had the right before, and the answer was that they had no right. Mr. Stoney used to take a few stock on the place, as we were doing, but according to our understanding of that, and the tenants' understanding of that, if I take on cattle on my mountain at 1*s.* 6*d.* a month you cannot say that you have any right.

48906. It was a condition of the purchase that the Board would re-sell the 2,000 acres of rough mountain grazing which are now being grazed by the tenants?—It has never been grazed by the tenants.

48907. By whom was it grazed?—Mr. Stoney put stock on it for 4*s.* at a time, and found it did not pay.

48908. Do you understand that the local people never grazed on this mountain?—I never said anything of the kind. What I said was Mr. Stoney took grazing on this mountain from any tenants who wished to put a beast on this place at so much a month, the same as we did. But the tenants as a body had no right over this mountain at all.

48909. I am not talking of rights. I asked Mr. M'Hale whether before the Board got hold of these 2,000 acres these local people used, as the result of an arrangement with Mr. Stoney, graze the stock on this mountain run, and he said yes. I asked Canon Grealy the same question, and he said that some of the local people used to graze the stock on this mountain run. That is altogether unconnected with the question of rights, but the Congested Districts Board, in its minute or memorandum to this Commission, states that this rough mountain grazing had never been grazed by the tenants. Is it so or is it not?—It is correct in the sense in which it was intended, that the tenants had no right to graze on the mountains. Anyone, whether he was a tenant or not, was allowed to graze stock on the mountain on payment of a head rent.

48910. There is a conflict of testimony?—I don't think there is any conflict. A tenant on the property, or anyone who was not a tenant on the property, who wished to send a beast at so much a month, or so many sheep, could do so.

48911. Therefore this statement that the mountain run had never been grazed by the tenants is not accurate?—We need not pursue it any further.

48912. Mr. Bryce.—Would not it be sufficiently accurate, and clear the matter up, to say "on which the tenants never had any right to graze," instead of "never had been grazed by the tenants?"—Yes.

48913. Mr. O'Kelly.—My whole point is, had the local people the right to graze these 2,000 acres or had they not?—They had not, as a body.

48914. Mr. Sutherland.—Mr. Stoney had the right to reject them if they applied for grazing?—Yes, and very few of them availed of it.

48915. Mr. O'Kelly.—Do you disagree with Canon Grealy?—I do not agree with Canon Grealy if he said the tenants had rights.

Sir Francis Mowatt.—I think in the case of both parties there has been a misunderstanding which might very well have occurred. The expression used, that the tenants had never grazed this land, is true in one sense; that is to say, they never grazed it as tenants, as appurtenances to their holdings. It is equally true that it is a very natural construction for an outsider to put on the statement that a tenant paying the head money which any one of the public might pay could graze his stock.

Mr. O'Kelly.—I am not suggesting that the tenants had any right whatever; but I am suggesting, as a result of the evidence of Canon Grealy and Mr. M'Hale, that those 2,000 acres of grazing land were used as accommodation land for the local people.

48918. Sir Francis Mowatt.—For anybody? I think it is quite established that it is so?—We offered it for five years as accommodation to them, with the result that they did not avail of it, and they stated to me that the addition of the very large area of very rough land, with the very small strips of arable land that they have, would be of very little use to them. This is my opinion too. Canon Grealy suggested that the Board bought this mountain land for £800 and charged Mr. Stoney only £600, leaving £200 to be paid by the tenants.

48919. Most Rev. Dr. O'Donnell.—Leaving £200 to be paid for the balance which was not given back to Mr. Stoney?—The actual facts were these. In the price we put £600 on the mountain, which included about 300 acres more than we sold to him, and we charged him for the smaller area what we paid for the larger area, namely, £600.

48920. Sir John Colomb.—No money passed yet?—Yes. He paid the money in cash. He did not rebuy under the Land Purchase Acts. He had to pay the money in cash.

48921. Most Rev. Dr. O'Donnell.—I think Mr. O'Kelly said that in a Parliamentary reply the sum of £800 was mentioned?—Yes, but including other holdings that did not come within this mountain.

48922. Sir Francis Mowatt.—The next point is that the Board encouraged the disposition to emigrate of some of the small holders who were dissatisfied with the delay by giving exorbitant prices for the interest in two small holdings. Two cases have been referred to: Myles Kilcoyne, whose valuation was 17*s.*, to whom the Board gave £22. It appears that the rent was £1 11*s.* Would you kindly say what is the justification for paying £22 for a rental of £1 11*s*?—Myles Kilcoyne and his wife, an old couple, lived on this holding, Myles being the tenant. They had living with them a son of theirs and his wife, young people. His son was very delicate. They also had three daughters in America, and one son who was getting on remarkably well there; and the young married son at home, hearing the good accounts from his sisters in America, and also, I was informed by the family, acting under the advice of the doctor, decided that he would go to America. When the old couple found that their last son was going they decided that they would go with him. They would not remain. They signified their intention of selling the interest in their little holding, on which there was a small house and outoffices. The Inspector, acting on my instructions, told them that the Board would like to arrange with them for the purchase of it. After negotiations they agreed to accept the sum of £22 for their interest. Remember that this £22 included the house, such as it was, on this little holding. The rent of the holding was £1 11*s.* Canon Greally says that the valuation was 17*s.* I am not sure whether that is so or not, and I have no means of checking it now. The rent was 31*s.* They had a house on the holding, and just by pure accident I find that I have a tracing of the holding among my papers. Here is Myles Kilcoyne's holding (indicates on tracing) of 4 acres 2 roods and 2 perches. It is in thirteen different patches (indicates). The Board agreed to buy the little holding, and gave these poor people £22, which was 15½ years' purchase of the rent, which rent did not include the house, the property of the people, an ordinary type of poor cabin such as you will see samples of. How Canon Greally says that £22 for the interest of a man with 4 acres of land at 31*s.*, with bog attached, and the right of commonage on the mountains, was excessively dear, and says that these poor people should not get this large sum for their interest, I cannot understand.

48923. Mr. SUTHERLAND.—What was it you intended to do with Kilcoyne's holding?—It could not be striped without it. These thirteen divisions can be given to adjoining occupiers.

48924. Sir FRANCIS MOWATT.—You paid 15½ years' purchase to assist in enlarging the adjoining holdings, and you contend that that was a reasonable price to give?—Yes.

48925. Mr. O'KELLY.—Whatever the object of the Board in buying it, the result was that the family had to emigrate?—The object of the family was to go to America, no matter who bought, and if the Board did not buy somebody else would buy. The Board put no pressure of any description on the man.

48926. Do you think it was a wise precedent for the Congested Districts Board?—The alternative was to let somebody else buy. I think it was a wise precedent.

48927. Do you not think it would have been better to postpone negotiations with those tenants until such time as you had lands to which you might migrate them?—What tenants?

48928. The tenants you bought out?—They would not wait.

48929. Did not you hear it suggested that the result of the intervention of the Congested Districts Board was that a certain number of families emigrated?—The suggestion was that the action of the Congested Districts Board has, in fact, led to the emigration of those people, and I want to state to you the facts, on which I believe you will form the opinion that the action of the Congested Districts Board had no such result whatever.

48930. Sir JOHN COLOMB.—You took action because you understood that the family were going to emigrate?—Because we knew that they were going.

48931. Mr. O'KELLY.—How did you ascertain that fact?—From the people having informed them of the fact and offering to sell their holding to anybody who would buy it. Nobody will dispute it.

48932. Sir FRANCIS MOWATT.—The people themselves told you?—And everyone about knew it, and the man himself told me he was going. He told me he was dying of consumption, and I said it was a curious thing he was going to America. He has died since, I believe.

48933. Mr. O'KELLY.—How can you justify the handing back of 2,000 acres to Mr. Vesey Stoney after having purchased it?—I have given all the facts.

48934. You say you did it for the purpose of getting 300 acres elsewhere?—To secure good agricultural land elsewhere, and because this other land would have been of very little advantage to the tenants. If they could get it for nothing it might as well to have it, but the Board do not give land for less than they pay for it.

48935. I think you spoke about the advantage of consulting influential men in the various districts in which you conduct operations?—I am always ready to hear anyone's opinion.

48936. Did you hear Canon Grealy say that during the last few years he has been practically ignored?—I am sorry to hear him say that. That is the only explanation I can give for his action in taking up the line he does. All I can say is that so far as I am personally concerned it was not a premeditated or arranged thing.

48937. I am sure it would not be on your part?—Of course, Mr. Vereker, I have no doubt, if he has any hostile feelings towards him, would not call, and I do not think that any self-respecting man, under similar circumstances, should be compelled to call, without invitation, to the house of a person openly hostile to him.

48938. You say you found it to be very advantageous to consult the local influential men of the district when carrying out operations in Newport. In the region contiguous to it you would find it advantageous to consult men like Canon Grealy?—Yes, and any man interested in our work, whether an important man or not.

48939. There was a time, in France, when it was said that patriotism was the last refuge of scoundrels. You spoke about agitators in this particular part of the country. What do you mean by an agitator?—A person who occupies most of his time in creating disturbance in the centre in which he moves.

48940. Are there any such men in the County Mayo?—Yes, a good many; for personal ends as a rule, and not with the object of——

48941. Canon Grealy would not fall into that description?—He would not. I will not name anybody.

48942. I think that it was a most infelicitous remark?—It would have been better if I did not make it, but all the same I am not going to run away from my statement.

Mr. O'KELLY.—If you say you should not have made it I think you should withdraw it. I confess I do not like it, because I belong to that unfortunate category myself.

48944. Sir FRANCIS MOWATT.—There is another Kilcoyne who bought the interest of a man named Purvis for £11, and the Congested Districts Board gave him £52 for the same holding?—This holding originally belonged to a man named Mally, who failed to pay the rent of it. Purvis was a gamekeeper to the landlord. Mr. Stoney offered him the holding. Subsequently Purvis was anxious to leave the country. He was a stranger here. He was different in religion from the people. As far as my knowledge goes, there was some trouble in getting anything for the holding. He got the holding very easily as I have explained, and through the intervention of Canon Grealy, John Kilcoyne, a young married man at the time, paid £11 for it, together with £6 10*s.* arrears of rent, and he also paid £4 for a little cabin, not upon the holding, but adjacent to it. That is to say, he only paid £21 10*s.* altogether for what he surrendered to the Board, the Board paying him £52. I suggest to you that there is another view of this case. The rent of the holding is £3 10*s.* The price which the Board paid for the tenant-right of this small holding was about 15½ years' purchase, out of which we stopped the rent due. This John Kilcoyne from whom the Board bought the holding for £52 went subsequently to another holding on the same townland owned by an uncle named Pat Kilcoyne, paying Pat Kilcoyne for the tenant-right interest of his holding, and Pat went away to America, and Canon Greally said it was we made Pat go to America, although we had no dealings with him at all. The man we dealt with is in Scotland at present, but he has his wife and young family at home. He got Purvis's holding a bargain from the landlord. That was his luck. Purvis got it a bargain. When we came on the scene could we take advantage of this man because he got it cheap?

48945. The inclusive rent was £3 10*s.* You gave £52 for that. That is about fifteen years' purchase, and you say that fifteen years' purchase on a rent of £3 10*s.* is a fair price?—Yes; we only paid about £13, for we stopped the rent due.

48946. As regards the re-sale of the 2,000 acres, that was not, I understand, under the Wyndham Act?—No. It was sold for cash to Mr. Stoney, and not under any Land Act. The Board refused to have the sale through the Land Act.

48947. We come now to the statement that Mr. Stoney wanted it for a sporting park, and the tenants for existence, and the Board paid for the fencing of this immense game park. Am I right in understanding that what they paid for was the boundary fence, which they were bound to put up between their own property and the property which was sold?—They did not even go that far. They agreed to pay half the cost of the construction of a fence made in accordance with a specification previously agreed on between the tenanted land of the Board and the land sold to Mr. Stoney. This map shows it (indicates on map). There was a fence built by Mr. Stoney, the Board agreeing to pay half the cost within certain limits. Mr. Stoney, however, continued this fence right up to the summit of the mountain. We had nothing whatever to do with that. We only paid half this portion here (indicates on map).

48948. So far from paying for the fencing round the whole way, you practically paid for half the fencing on the south side only?—Yes.

Aug. 26, 1907.

Mr. E. Thomas O'Donel.

Mr. E. Thomas O'Donel examined.

48949. Sir Francis Mowatt.—You reside at Newport House, Newport, County Mayo?—Yes.

48950. You appear for the Irish Landowners' Convention?—Yes. I acted as agent for some years on the property of the trustees of the Achill Mission Estate, in the Island of Achill, up to the year 1880, during which period the rents were well and punctually paid. The land is altogether mountain and bog, and there is no land suitable for migration purposes on the estate. If some of the population could be induced to migrate to suitable holdings elsewhere I think it would be beneficial to them, and also to those remaining. I believe the Parish of Achill is one of the few districts in Ireland in which the population has increased in recent years.

48951. Has there been much emigration from Achill?—I don't think so, so far as I know.

48952. Sir John Colomb.—There is migration, but not emigration?—Yes, migration to England and Scotland.

48953. Sir Francis Mowatt.—There is no land suitable for the purposes of migration?—I would say not.

48954. If migration took place, would there be land proper for the enlargement of small holdings?—There is only the bogland of which the present holdings are made up. The extension of the railway by Mr. A. J. Balfour to Achill Sound has given great facilities for sending fish to markets, which are caught round the island, and this industry could be much developed, and has already been largely encouraged by the Congested Districts Board. I consider the railway line should be extended from Claggan Ferry to Belmullet, which would develop that large and important district now entirely cut off from railway accommodation.

48955. Where is Claggan Ferry?—About midway between Achill Sound and Mallaranny.

48956. Sir John Colomb.—In your knowledge and experience, has the fishing naturally developed by reason of, or since the making of, the railway?—I think it has, decidedly.

48957. More people are turning their attention that way?—Yes.

48958. Sir Francis Mowatt.—Has the number of boats increased?—I have not got statistics, but I am pretty certain that they are, because at the present time there is a great facility for sending lobsters over to the markets in England which used not to exist because of the difficulties of transit, and I am sure that this could be developed more. My wife has a fair-sized estate in the neighbourhood of Newport, including a substantial area of good grass lands in hand. These she is quite ready to sell at a price which, invested at 3½ per cent. will bring in the present income yielded by the agistments lettings.

48959. Sir John Colomb.—You mean by that that the money received after the expenses of proving title and all that if invested at 3½ per cent. would leave her as she is?—Yes.

48960. Sir Francis Mowatt.—With her net income as at present?—Yes. In every case of a sale direct to the tenants, where a price has been arranged for a holding between landlord and tenant, and the price arranged is within the zones, the sale should not be stopped by any question as to security.

48960A. You will bear in mind that the Exchequer is ultimately responsible?—Certainly.

48961. Do you think they should not interfere when they have reason to believe that the price at which the sale was completed would land them eventually for payment of the security?—I think that when a landlord and tenant make a bargain to purchase that is good enough security.

48962. Though if the tenant fails the State is ultimately the security to find the money?—Everybody is liable to fail at some time. There is only an occasional failure.

48963. The fact that the man is liable to fail is the fact that obliges the State to see that he does not contract so improvident a bargain that the State will have to get him out of it?—Yes, but I think it is very improbable that he would contract such a bargain. The fact of the rent being judicial, and the terms of sale within the zones, should be conclusive evidence that the State is sufficiently protected and the advance thoroughly secure.

Sir Francis Mowatt.—I should be glad to know that it was a conclusive security, but I cannot say that I see it.

48964. Mr. O'Kelly.—You say the fact of the rent being judicial, and the terms of sale within the zones should be conclusive evidence that the State is sufficiently protected and the advance thoroughly secured. Now, you have heard of the Blake-Forster Estate in the County Galway?—Yes, but I do not know anything about it.

48965. Have you heard that before the passage of the Act of 1903 the estate was offered at some twelve or fourteen years' purchase?—No, I did not hear that.

48966. You may take it from me that that is so: that the tenants agreed to purchase at that price: that the Land Commission sent down their inspector, and that the inspector reported that it was not security for the advance that was asked?—No, I have not heard anything about the details.

48967. Take it from me that that is so. After the Land Act of 1903 was passed the Blake-Forster Estate was offered to the Estates Commissioners, and agreements were come to at prices of from eighteen to nineteen years' purchase, in close proximity to the zones—I won't say within them. Do you think it would be wise that an estate of that kind, coming within the zones, should be passed and the money advanced?—I don't see why it should not be.

48968. And that an estate which was not good security for twelve years' purchase should be sold under the Land Act of 1903 at nineteen years' purchase?—That is the value of the Land Commission.

Mr. O'Kelly.—Suppose it came within the zones there would be no inspection?

48968A. Mr. Bryce.—It was before the Estates Commissioners?—It was the Land Commission.

48969. Mr. O'Kelly.—The Land Commission refused to advance twelve years' purchase of this property, as a result of inspection. Coming within the zones you have no inspection. The sale must be automatically confirmed. Do you think, therefore, that your statement that when an estate comes within the zones that it should be conclusive evidence that the State is sufficiently protected and the advance thoroughly secured?—Yes.

48970. Bearing in mind the Blake-Forster Estate, do you still adhere to your statement?—I do, because that might be only an individual case, or there may have been a mistake made about it. If they did not think it was security for twelve years' purchase, I think they must have made a great mistake in not sanctioning the sale.

48971. Before the Act of 1903 passed it was proposed to sell this property under the Ashbourne Act. An inspector of the Land Commission comes down and says: "This estate is not worth twelve years' purchase, and we are going to tell the Land Commission not to advance the money on this property." After the Act of 1903 passed, any sale the price in which falls within the zones must go through. Is that good for the State?—Yes, because when a landlord and tenant agree they are the best judges of the value of the property.

48972. Observe that the landlord and tenant are not the only parties to the sale?—They are the best judges of the value.

48973. If the Land Commission valuer says that the property may not be able to pay the annuity represented by the twelve years' purchase, do you think it good business for the State afterwards to allow a sale to go through at a price far in excess of the value?—The gentleman evidently was not a master of his business who valued that.

48974. Do you seriously put that forward?—Yes.

48975. Did you hear what the Estates Commissioners did in the case?—No.

48976. They refused to sanction the advance. You say that landlord and tenant are the best judges of their own business?—Yes.

48977. Let me suggest that landlord and tenant are not the only parties to a sale of the kind. The security for the ultimate repayment of these annuities falls upon a second class of the community, other than landlord and tenant. It falls upon the ratepayers, professional men, artisans, shopkeepers, and I suggest that it is only right that there should be some revision of those agreements before they pass through in order that improvident bargains would not be made, and in order that the general ratepayers of the country may not be involved in heavy financia

afterwards. Have you got any observation to ke on that statement?—Only what I have said.

8978. I therefore take it that you think that the eral community who guarantee the repayment of se annuities ought not to have their views con-ered?—I don't think that an occupying tenant is l enough to bind himself to pay for a number years an annuity that he is unable to pay.

8979. Let me suggest this. Suppose that a third ty has to secure the repayment of the advance the purchase, he ought to be consulted?—He may consulted, but his opinion may not be taken.

8980. How would you like to be called upon to go urity, say in one of the local banks, for a Mr. A, owing in your heart that he never could pay that ney back to the bank?—I would not do so.

8981. Therefore I suggest that the general tax-yer ought to be considered when these bargains made?—Perhaps you may think so.

8982. Mr. Bryce.—Surely the cases are parallel? don't think so.

8983. Sir John Colomb.—You are being asked to npare prices offered now and rejected formerly on estate that you know nothing about?—Absolutely thing.

8984. At all events at that time the landlord was id in stock?—He was.

8985. And that stock was then at a premium?—was.

8986. Take it at 110. For every £100 the land-d got £110?—Yes.

8987. Then, again, the annuity which the tenant d to pay has been changed from 4 per cent. to 3½ r cent.?—Yes.

8988. Therefore, taking the annuity alone, the fference in the annuity makes a difference in the mber of years' purchase that a landlord can re-ve without a tenant paying any more?—Of course does.

8989. Then, again, in this particular estate, of hich you know nothing, for all you know the rents ay have been reduced since the offer of 12 years' rchase was made?—They may.

8990. Therefore you cannot draw any general de-ction from a property about which you know no-ing?—Certainly not.

8991. Most Rev. Dr. O'Donnell.—I am not going to the general question, but I wish to k one or two short questions arising out of your ragraph. Why do you say that the State is otected if the terms of purchase fall within the nes?—Because it is probably a judicial rent.

8992. The reason I ask you this is; in answer to e of the Commissioners you said landlord and nant were sure to agree about terms that were ssible. If that were so, how did the zones come ?—Because it is within the zones; isn't it?

8993. But the zones would not be required if the rgain between landlord and tenant were always ure. That is why I put the question?—I am eaking within the zones at present.

8994. That is the point. I want to know how it is that because a bargain fell within the zones the ate was secured?—You could leave that out if you se.

8995. You spoke of legislation. Are you aware at under the Act of 1903 if the Congested Dis cts Board purchase an estate in Achill the zones not apply?—I was not aware of that.

Most Rev. Dr. O'Donnell.—They do not apply at t in the case of purchase by the Congested Dis-icts Board.

8996. Mr. O'Kelly.—That is, it does not prevent spection?—It does not alter the case in the case of rchase.

Sir John Colomb.—It is not peculiar to Achill.

Most Rev. Dr. O'Donnell.—Which is merely for ustration. Whenever the Congested Districts oard buy an estate the zones do not apply.

8997. Mr. Kavanagh.—Have you known of any rect sales taking place in this country?—In the estport Union?

8998. Yes; direct sales from landlord to tenant nder the Act of 1903?—I don't think so, except in ne instance. That was a case of my own, in which sold to the Congested Districts Board.

8999. Were there any non-judicial tenants on at?—It was only a grass farm, as a matter of ct.

9000. A great many direct sales have taken place through the country?—Yes.

9001. There would be non-judicial tenants on many of those?—Yes.

9002. Therefore there would be inspection?—Yes.

9003. Have you ever heard of any being upset by the inspectors not considering the price secured?—I have not. It may have occurred, but it did not come under my knowledge.

Mr. O'Kelly.—With regard to this estate, I will give you a decision of Mr. Commissioner Bailey to show that after all there was something in what I was saying. He speaks of this Blake-Forster Estate: "For both of the above reasons, either of which would, in our opinion, be sufficient, we, in the exercise of our discretion, refuse to declare the lands comprised in the originating application an estate for the purposes of the Act, and must decline to be parties to proceeding to sanction an advance which would impose loss on the taxpayers." So, after all, the taxpayers must be considered.

9004. Sir Francis Mowatt.—What is your next point?—Where owners signify their willingness to sell grass farms the offer is conditional on having their tenanted land purchased simultaneously.

9005. Each owner can make his own proposal?—Yes.

9006. He may offer to sell his grass land and tenanted land together?—Yes. That is the opinion, I think, that is widespread through the landlords of the County Mayo.

9007. Mr. O'Kelly.—Don't you think that that is the view which the tenants also take, that they should be sold together?—That is the view of the landlords. I don't know what the tenants' views are.

9008. You live in the County Mayo, and are familiar with the public opinion of the county?—Yes.

9009. Don't you think it is the widespread view of the tenants that the grass land should be sold with the tenanted land?—I think they would be very glad to get that land.

9010. Do you think it is the view of the landlords also?—Yes. They wish to sell their grass lands, provided that the tenanted land is purchased also.

9011. They are willing to sell the tenanted and untenanted together?—Yes.

9012. And hand the whole property over bodily to a purchasing authority?—Yes.

9013. Have you heard of a farm called the Cranagh Farm?—Yes.

9014. Does the procedure followed by the landlord in that particular case altogether square with your view?—I am not quite sure if it is the farm near Ballina that you are referring to?

9015. Yes?—I don't quite know about it.

9016. You read the local newspapers?—Yes, but I don't believe all I see in them.

9017. I am sure I agree with you?—I don't know anything about your views. I am sure they are very good, but at the same time I might disagree with you.

9018. You know that the Cranagh Farm is on a property which is congested, though not scheduled as congested on account of the acreage of the holding?—I do not know where it lies.

9019. It is in Ardagh, three miles from Ballina. The landlady there has 113 acres of grazing land, and instead of selling the grazing land and the tenanted portion of the property to the Congested Districts Board or the Estates Commissioners, she proposed, in the first instance, to stripe the land herself, charging fines for it, and, having done that, afterwards to sell under the Land Act of 1903, in that way rushing up the prices from the old average of seventeen or eighteen years' purchase, to close on forty years' purchase. You have heard of that case?—I did not really interest myself in the proceedings at all.

9020. And, furthermore, selling under the Act of 1903, the rent would be upon the grazing land, which is grazing rent, and about twice the ordinary judicial rent in the district?—She might have been quite entitled to it.

9021. But you say that where owners signify their willingness to sell their grass lands the offer is conditional on having their tenanted land purchased simultaneously, and I submit to you that the attitude of some of the Mayo landlords is greatly at variance with your statement?—I think the majority of them

Aug. 26, 1907.

Mr. R. Thomas O'Donel.

are as I say. I don't know about individual cases. There may be an exception.

49022. There are three altogether in the county?—That case appears to me to be an exception, from what you tell me.

49023. You would not approve of the procedure adopted there?—I don't know all the details.

49024. If I have described it accurately would you approve of it?—I would have to know more about the case before I could give an opinion. All prices should be fixed by an independent tribunal, composed of the most impartial men. I cannot accept the Estates Commissioners as independent between the parties; and however impartial they may be, or intend to be, it is eminently objectionable to have the purchaser determining the price in every instance.

49025. Mr. SUTHERLAND.—You have no confidence in the Estates Commissioners?—The reason I put that is this—A rather peculiar case occurred in the County Mayo. There was a landlord who was receiving about £3,000 a year for grazing land, and the Estates Commissioners approached him with the idea of getting him to sell, and he said he would. The inspectors came down and inspected the place and then went back, and the Commissioners offered a price which would have reduced his income by £500 a year. That evidence was given at Crossmolina before you the other day. It was referred to in Colonel Knox Gore's evidence.

49026. Was the assumption that whatever the man put forward as his claim should be conceded? Has not the tribunal the right when both sides are before it to use its discretion as to what the proper price should be?—So has the landlord to say he could not accept the offer.

49027. Suppose that it was the Land Commission, would not they do the same thing?—I am only illustrating this as a case.

49028. You say you object on the ground that they themselves are the purchasers. Suppose that the fixation were transferred to the Land Commission, would not they also be judges in their own case?—Yes, they would.

49029. Why is there an objection to the Estates Commissioners compared with every other tribunal you have in Ireland?—I am only speaking of this individual case.

49030. You are making a general statement?—I am taking that one case that came under my notice as an example.

49031. You simply object that they did not agree with the landlord in his opinion as to what was the value of his estate?—Exactly.

49032. But it is not their duty to do that. Their duty is to fix an impartial price?—They fixed ap parently the price to suit them.

49033. What you contend for is that the price put forward by the landlord should be the price paid?—I don't say that at all. Landlords sometimes ask more than they expect to get.

49034. Then if it was agreed to they would get more than they expect?—He was not going to lose £500 a year.

49035. Sir JOHN COLOMB.—All, I take it, you mean by this paragraph is that there is a feeling among the landowners that the Estates Commissioners, being the purchasers, should not be the absolute and arbitrary fixers of the price?—Yes.

49036. Mr. SUTHERLAND.—But your example was that the seller should be the absolute and arbitrary fixer of the price?—I don't mean that at all. He did not name a price at all. He expressed his willingness to sell, and they named a price which would reduce his income by £500 a year.

49037. Mr. BRYCE.—Is it quite correct to call th Estates Commissioners the purchasers?—They woul be in this case.

49038. The real purchasers are the tenants?—The are no tenants in this case.

49039. The Estates Commissioners are only a chan nel. They would be the purchasers if they were pur chasing for their own benefit. They are not. Ther fore the public are entitled to look on them as im partial people. The real purchasers are the tenants —But in the case to which I refer there was n tenant.

49040. There were going to be tenants. The Estate Commissioners always purchase for the sake of giving to tenants?—But at the present moment there is not.

49041. But it is not fair to make the imputatio of the Estates Commissioners being judges in thei own cases. They are not. They are judges betwee the landlord and the persons who are going to get th landlord's land?—Yes, but there is no person in bein at the moment, and the property is vested in them for the moment.

49042. They have no object but to see that justice i done?—No, but apparently in this case justice is no done.

49043. Mr. O'KELLY.—Is your distrust of the Es tates Commissioners based on the other case or that —That is the case I base it on.

49044. Upon that isolated case you urge that th Estates Commissioners are not independent betwee the parties?—I am perfectly sure that they are tho roughly fair in their opinion, but I don't think they will give justice.

49045. Don't you think that the circumspectio with which the Estates Commissioners approached th appraisement of value on this property would also b observed by the Congested Districts Board if they di their business properly?—I don't know. Do you mean that the Congested Districts Board would follow the same lines as the Estates Commissioners?

49046. Certainly?—I should say that the Congested Districts Board would be better judges. They have a good deal more experience.

49047. How are they better judges?—They have been longer at the business.

49048. But those who were engaged in the busines for the Estates Commissioners have long experienc in the business?—Not so long as the Congested Dis tricts Board.

49049. You speak from absolute knowledge of th fact?—Yes. I am pretty certain of it. No proposi tion could be fairer than this, and I have authorit for putting it in: "The Mayo owners, almost th whole, will sell tenanted and untenanted land on th basis of getting their incomes at 3½ per cent. basis." To ask them to sell for less would be inequitable, and I would say, nothing short of confiscation. There i one matter I would like to mention in reference t Mr. M'Hale's evidence. He said this morning that had offered Mrs. O'Donel's (my wife's) property a Newport for sixteen years' purchase. That is inaccu rate. There was no negotiation of this sort.

49050. Mr. O'KELLY.—You say that Mr. M'Hale' statement is inaccurate?—Yes.

49051. That may be so. But are you aware tha negotiations proceeded between the tenants and you predecessor?—I am not aware of it.

49052. Might it be so without your knowing it?—I don't think so. I would wish to add to my evidenc that I think great credit is due to Mr. Doran for th able manner in which he has been carrying out th migration schemes in the country so far as I have see them.

Mr. Patrick Sweeney.

Mr. PATRICK SWEENEY examined.

49054. Sir FRANCIS MOWATT.—You reside at Achill Sound?—Yes.

49055. We would like you to give us a general idea of the condition of the people of Achill, more particularly with reference to land and the prospects of assisting them by getting better holdings?—I have a pretty large connection with the island myself. I am a general merchant.

49056. Have you any land?—Only a few roods. The present condition of the people is very bad. The holdings are very small. A family of six or seven often has to live on two or three acres of bog. Certainly the produce of that could not support a family. The girls have to go to Scotland even as early a twelve years of age, when they should be at schoo About 1,100 young boys and girls leave Achill ever year and about 1,000 men go to England.

49057. Do any of the men migrate to the coal min in Scotland?—Very few. They go to Scotland to th potato fields, and act as gangers for the women to di the potatoes, and this, that, and the other, and think it would be a great act of charity to do an thing possible to keep the women at home. It is cruel thing to see women in the fields digging potato and putting them into big hampers which they have put on their backs.

9058. Most Rev. Dr. O'Donnell.—Do the women ivate the fields while the men are away?—At home e they do the sowing generally. They don't leave il the 1st of June. They return in October.

9059. On the average, how many women go to tland in the year from Achill?—Between the boys women about 1,100.

9060. You could not specify how many are women how many boys?—About two-thirds are women. others are boys.

9061. How do they travel?—There was a steamer to sgow got up in opposition to the railway company. ring the season it takes about 700. The railway pany gets the balance.

9062. Does the railway company carry some of se who go to Scotland?—Yes. They go by rail n Achill Sound to Dublin, and then by boat to sgow.

9063. Sir Francis Mowatt.—Could you tell me at some hardy woman or girl brings back from se four months' work?—From £8 to £10 on an rage.

9064. And the young men?—The men in England, hey have a fair harvest, make from £12 to £15. ne of them come home with £5. If they get a good on for hay and it lasts only about four weeks y have to come home then. If they get a wet on it prolongs the work, and they make more ney.

9065. Don't they stop over for the grain harvest?—ne don't. They have too long to wait to support nselves.

9066. So you like it to be wet in England and fine Ireland?—Yes, that would pay them better.

9067. Sir John Colomb.—I understood your main ction to seeing the women going is that they have arry weights on their backs?—Some of these sacks over 2 cwt.

9068. Are you aware that all over Europe women k in the fields?—I have travelled a good deal over gland, and I have not seen it.

9069. But on the Continent?—I have not been on Continent.

9070. Most Rev. Dr. O'Donnell.—Where do they y the hampers?—In Scotland.

9071. Do they go very much for weeding potatoes? o; digging. If there was some industry started the place to keep the women at home it would be rand thing. It would be a charitable thing to do.

9072. Do any of the girls go for the fish cleaning curing in Scotland?—Never.

9073. Sir John Colomb.—Have you got any in- try in your mind that could be made to pay here mercially?—If there was hosiery or lace-making some industry like that it would be a very good ig.

9074. Have you got no lace-making here at all?—Sisters of Mercy have started a small branch here he convent.

9075. Is that successful?—It is.

9076. How long has it been established?—About months. In reference to the holdings, I may say t it is quite impossible for the people to live on n. There is scarcely a year but we are crying out relief, and it is a demoralising thing, and this r, I am afraid, will be worse than any for the t fifteen years. The potato crop is almost a total ure.

9077. Do you think would the people here go to er parts of Ireland if they got farms?—I don't nk so.

9078. Therefore it comes to this, that in order to eve the condition of the people as at present sting, it must be done locally. You cannot look migration to do it?—I fear that they would not grate.

9079. Most Rev. Dr. O'Donnell.—What industry you suggest?—I think it would be wise for the igested Districts Board to buy up what land is ilable, and divide it up for the enlargement of dings.

9080. Mr. Sutherland.—Is there much land avail- e?—There are a few good farms.

9081. Sir John Colomb.—Grazing farms?—Yes. l there are very large tracts of bog too—cutaway

9082. Mr. Sutherland.—Which can be reclaimed? Which can be reclaimed.

9083. Does it rest upon clay or rock?—On clay.

49084. Mr. Bryce.—Has the fishing rather fallen off here?—No; it has rather increased.

49085. Lately?—Yes. Ten years ago we had not got one of those nobbies or fishing boats that the Congested Districts Board has. We have purchased eight of them on the island at present—they have got them on the five years' system.

49086. Are they doing well with them?—One season was good with them, but this season is against them.

49087. The weather was bad?—Yes, and the fishing was bad too.

49088. Most Rev. Dr. O'Donnell.—Have you any suggestion to make about developing the fishing?—I have. We are very badly off for pier accommodation here. There are a few suggestions that I would wish to make if it is within the province of the Commission to hear them. There is a pier at Darby's Point that we would like extended. That is where all these nobbies come to land their supplies of fish. It is at Achillbeg Island, about five miles from here.

49089. Sir John Colomb.—Is there a good road to it?—Yes, a splendid road. If there was an extension of 200 feet I think that boats of 100 tons could easily float at half tide or less. We are talking this long time of a harbour of refuge. There is a very natural place for a harbour at Ballycurraun. It is about nine miles from here. It is a natural harbour as it is. If a few thousand pounds were spent on a pier any boat could save itself by going there. It is near Mallaranny. There is no fishing boat but would take refuge there. There is a natural landing to this pier at Darby's point. At present in rough weather boats have to make for Westport, but if there was a proper pier where I have mentioned they would be quite safe.

49090. Mr. Sutherland.—Then you would have two sets of piers, one for landing and one for refuge?—Quite so, and I think that it is a very essential thing. Another point is this. Just opposite the coastguard station, if there were a few rocks removed, at a cost of a few hundred pounds, it would be a great improvement. There is a very fine pier at Keel, on which the Congested Districts Board spent about £5,000 or £6,000, which is, however, choked up, and it would be a great matter if it could be cleared. The cost would be not more than a few hundred pounds.

49091. If the harbour was so much required, and was made at such a large expenditure, why was not it kept going?—I fail to understand why the Board of Works or the Congested Districts Board did not finish it properly, instead of leaving a bar at the entrance.

49092. The currents have collected it?—No. I understand it has been there since the completion of the work.

49093. But the bar is the result of the working of the wind and the currents, and, if removed now, will have to be removed again?—That often happens, but in this case the bar has been there since the work finished.

49094. You complain of the fisheries not being developed through lack of piers. In this case, where a pier has been built at a large expenditure of money, it has not been kept going?—The boats cannot enter there on account of this bar.

49095. Sir Francis Mowatt.—So that it has never been of use since it was made?—Not a bit.

49096. Mr. Sutherland.—It was made in 1886, and was a heap of ruins in 1897, and it was re-constructed by the Congested Districts Board?—I am very much in favour of this Claggan Station Railway. It is a very essential thing. It will open up the district, benefit the people considerably, and give employment. It is a most useful line. We have the authority of the Directors of the Midland Great Western Railway for saying that they will work it if it is constructed.

49097. Mr. O'Kelly.—You mean the Mallaranny to Belmullet Railway?—Quite so. There is another poor district that I want to bring to your attention. Mr. Arthur Balfour built a bit of a bridge at Dooega, which is a most congested village. Unfortunately the waves came and swept the whole structure away. Mr. Balfour, from his private purse, generously gave this bridge to Dooega. Now that it is broken the people on the two sides of the village cannot communicate with each other. Another very important thing is the dredging of this channel here from Achill Sound to Darby's Point. Since the bridge was built the whole place was

Aug. 26, 1907

Mr. Patrick Sweeney,

choked up. Sand has accumulated in the channel, and boats that used to come through at Darby's Point to fish in the channel are blocked, and if there were a dredger employed to clear the Channel from Achill Sound to Darby's Point it would be a vast improvement and a great benefit to the people. Eventually I think that the people of Achill must live on the fishing and stick to the fishing. I don't know any industry, except the fishing, that I feel we can do much with.

49098. Sir JOHN COLOMB.—Have any representations been made to the County Council of the Agricultural Department as to the necessity of dredging owing to the silting up at this particular point doing so much damage?—I happen to be a member of the County Council, and I would say that we are so handicapped with rates that it is impossible to make any further grants.

49099. Mr. SUTHERLAND.—What is the amount of your rates?—I think it is 6*s.* 8*d.* on buildings and 3*s.* 4*d.* on land.

49100. Sir JOHN COLOMB.—Are rates very much higher now than they were before the establishment of the County Councils?—They are about the same.

49101. You don't believe there has been any recent increase of rates?—We are complaining very much of the rates on buildings.

49102. Mr. O'KELLY.—You are aware that the increase has been progressive, owing to the fact that County Councils have been compelled to provide for expenditure in connection with matters that the Grand Jury had nothing to do with, for instance, agricultural and technical instruction, sheep dipping, and so on; and you are aware that we had to borrow a large sum of £30,000 in connection with the lunatic asylum, and that all these things money?—Yes, and there were pensions to old offic There were eight nobbies purchased by the fisher here, and I would ask the consideration of Congested Districts Board to extend the time years longer. The men got five years to pay they borrowed. These two seasons have been aga them. They have paid a big price; they are ho and as long as they get the money they will pa The Congested Districts Board has given thous of pounds in Achill. I have never known a civil process to be given to any man. That is the hig character could be given the community as reg paying their debts. So I would recommend the tension of the time by five years longer. They already paid off one year's instalments. Then no more congested corner of Ireland than Achill. the name of goodness buy up the place. In the ne bouring island, Clare Island, they are prosper Before the Congested Districts Board got it there nothing but steamers with soldiers going there strive to extract rents and rates.

49103. You want something done for Achill such was done for Clare Island?—Certainly; to buy land, stripe it, and redistribute it.

49104. Most Rev. Dr. O'DONNELL.—The land Clare Island is very much better than the land Achill?—I believe it is.

49105. And it is more difficult to do anything he —Yes.

49106. Mr. O'KELLY.—Would those who occu grass land in Achill have any great objection to p with it to the Congested Districts Board if they t it for the desirable work that you suggest?—I beli that the majority would be favourable.

49107. The minority would be obstinate?—Yes.

Rev. MARTIN CONNELLAN examined.

Rev. Martin Connellan.
